REDISCOVER THE POWER OF RADIOMETRIC DETECTION

RADIOMETRIC REAGENTS GUIDE 2010-2011

Your resource for essential research tools you can trust.

PerkinElmer[®]
For the Better

STILL THE
MOST
SENSITIVE

Radiometric detection remains the standard used by researchers in many scientific applications. Its' unprecedented sensitivity gives results that technicians and scientists can trust.

Table of Contents

■ NEN Radiochemicals & Radionuclides Reference Guide	
³² P-Labeled Nucleotides	4
³³ P-Labeled Nucleotides	5

50 YEARS OF SUCCESS

For over 50 years PerkinElmer has been a leading supplier of radiochemicals, liquid scintillation cocktails, vials and nuclear counting detection instruments. Today is no different. We have always been committed to providing you products for all of your radiometric needs and we are still committed today.

We are the source for many of the top brands of reagents and instruments for radiometric detection that everyone knows—from NEN® radiochemicals and Scintillation Proximity Assay (SPA) technologies to the MicroBeta², TopCount, and Tri-Carb® benchtop liquid scintillation analyzers and the WIZARD² automatic gamma counter. These are the systems of choice for all research applications. The Tri-Carb3180 and Quantulus are the best in class for ultra low level environmental monitoring and testing.

Radiometric detection is far more than reagents and instruments. You need scintillation cocktails, microplates, vials, film, safety equipment, service and the know how to use these techniques. PerkinElmer delivers what you need to be successful.

At PerkinElmer, we're taking action to improve the health and safety of people and their environment. Engaged in a proactive fight against illness, contamination and threats to our well-being, PerkinElmer conceives and delivers scientific solutions and components to meet our society's ever-changing needs. We're committed to transforming risk into safety, mystery into knowledge and ideas into action for a healthier today and a better tomorrow.

³²P-Labeled Nucleotides

Fresh Lot Calendar: www.perkinelmer.com/Toolkit

Fresh Lot	Half Life	Precalibration	Package Sizes	Packaging
Every Thursday	14.3 days	9 days	100 µCi 250 µCi 500 µCi 1 mCi	Shipped in a choice of blue plastic (BLU prefixes) or lead-lined grey plastic (NEG prefixes) packaging. Shipment in lead is required only for ³² P quantities above 1.5 mCi. Help minimize hazardous waste: order lead-free packaging whenever feasible.

³² P-Labeled Compound	Specific Activity	Concentration		Product Numbers	
	[Ci/mmol]	[mCi/mL]	[µM]	Color-coded green EasyTides.® Ready to use. Shipped ambient. Store at 2–8 °C.	Shipped in dry ice. Store at -20 °C.
ATP, [α- ³² P]-	800	10	12.5	—	BLU003X/NEG003X
	3000	10	3.3	BLU503H/NEG003H	BLU003H/NEG003H
CTP, [α- ³² P]-	800	10	12.5	BLU508X/NEG508X	BLU008X/NEG008X
	3000	10	3.3	BLU508H/NEG508H	BLU008H/NEG008H

³⁵S-Labeled Amino Acids

Fresh Mondays, Every Three Weeks

Product Name	Molecular Formula & Labeling Position	Specific Activity [Ci/mmol]	Activity Concentration [mCi/mL]	Product No.
Cysteine, L-[³⁵ S]- Packaged in 10 mM DTT.	HSCH ₂ CH(NH ₂)CO ₂ H	>1000	11	NEG022T
EXPRE ³⁵ S ³⁵ S Protein Labeling Mix, [³⁵ S]-, (EasyTag™) A mixture of approximately 73% [³⁵ S]-methionine and 22% L-[³⁵ S]-cysteine prepared directly from the hydrolysate of E. coli grown in the presence of carrier-free ³⁵ SO ₄ with added stabilizer. Packaged in a stabilized aqueous solution.	N/A	>1000	11	NEG772
EXPRE ³⁵ S ³⁵ S Protein Labeling Mix, [³⁵ S]- A mixture of approximately 73% [³⁵ S]-methionine and 22% L-[³⁵ S]-cysteine prepared directly from the hydrolysate of E. coli grown in the presence of carrier-free ³⁵ SO ₄ . Packaged in 50 mM tricine (pH 7.4) and 10 mM 2-mercaptoethanol.	N/A	>1000	11	NEG072
Methionine, L-[³⁵ S]- Cell Labeling Grade Packaged in 10 mM 2-mercaptoethanol.	CH ₃ S(CH ₂) ₂ CH(NH ₂)CO ₂ H	>600	31.5	NEG009L
Methionine, L-[³⁵ S]- Packaged in 10 mM 2-mercaptoethanol.	CH ₃ S(CH ₂) ₂ CH(NH ₂)CO ₂ H	>800	11	NEG009H
Methionine, L-[³⁵ S]-, (EasyTag) Packaged in a stabilized aqueous solution with blue dye.	CH ₃ S(CH ₂) ₂ CH(NH ₂)CO ₂ H	>1000	10.2	NEG709A
Methionine, L-[³⁵ S]- Packaged in 50 mM tricine (pH 7.4) and 10 mM 2-mercaptoethanol.	CH ₃ S(CH ₂) ₂ CH(NH ₂)CO ₂ H	>1000	10.2	NEG009A
Methionine, L-[³⁵ S]- Packaged in 10 mM 2-mercaptoethanol.	CH ₃ S(CH ₂) ₂ CH(NH ₂)CO ₂ H	>1000	11	NEG009T
Methionine, L-[³⁵ S]- Packaged in 50 mM tricine (pH 7.4) and 10 mM 2-mercaptoethanol.	CH ₃ S(CH ₂) ₂ CH(NH ₂)CO ₂ H	>1000	43.3	NEG009C

New products being added regularly. Visit www.perkinelmer.com/NewProducts for details.

¹²⁵I-Labeled Products

Product	Product No.
A-85380, [¹²⁵ I]-	NEX413
AB-MECA, [¹²⁵ I]-, (4-amino-3-[¹²⁵ I]iodobenzyl-5'-N-)	NEX312
ACTH, (1-39) Tyr ² -[¹²⁵ I]-	NEX342
ACTH, (1-39) Tyr ²³ -[¹²⁵ I]-	NEX165
Adenosine 3',5'-cyclic phosphoric acid, 2'-O-succinyl [¹²⁵ I]-iodotyrosine methyl ester	NEX130
Adrenomedullin, [¹²⁵ I]Tyr-, (human, 13-52)	NEX385
Adrenomedullin (Rat), [¹²⁵ I]-	NEX427
AGRP (Ac-87-132), [¹²⁵ I]-, (human, synthetic)	NEX372
Albumin, Bovine Serum, [¹²⁵ I]-, ([¹²⁵ I]-BSA)	NEX076
Aminopotentine, [¹²⁵ I]	NEX431
Amylin, [¹²⁵ I]-, (rat)	NEX448
Angiotensin I (Tyr ⁴), [¹²⁵ I]-, (human)	NEX101
Angiotensin II (Sar ¹ , Tyr ⁴ , Ile ⁸), [¹²⁵ I]-	NEX248
Angiotensin II (Tyr ⁴), [¹²⁵ I]-, (human)	NEX105
Angiotensin IV (Tyr ²), [¹²⁵ I]-, (human)	NEX295
Anti-mouse IgG, whole antibody, [¹²⁵ I]-, (goat)	NEX159
Anti-rabbit IgG, whole antibody, [¹²⁵ I]-, (goat)	NEX155
Antisauvagine-30 (8-1-His ²), [(¹²⁵ I)]-	NEX399
Apamin (His ¹⁸ -NH ₂), [¹²⁵ I]-	NEX242
Apelin 13 (Glp ⁶⁵ , Nle ⁷⁵ , Tyr ⁷), [¹²⁵ I]-	NEX393
Atrial Natriuretic Factor - Tyr28 (rat) - [¹²⁵ I]- ANF	NEX228
α- Atrial Natriuretic Peptide - Tyr28 (human) [¹²⁵ I] α-ANP	NEX425
BeKm-1 (Tyr ¹), [¹²⁵ I]-	NEX412
Bolton-Hunter Reagent, [¹²⁵ I]-, (monoiodinated)	NEX120
Bolton-Hunter Reagent, [¹²⁵ I]-, (diiodinated)	NEX120H
Bombesin (D-Tyr ⁶ , βAla ¹¹ , Phe ¹³ , Nle ¹⁴), [¹²⁵ I]-, (6-14)	NEX377
Bombesin (Tyr ⁴), [¹²⁵ I]-	NEX258
α-Bungarotoxin (Tyr ⁵⁴), [¹²⁵ I]-	NEX126 NEX126H
Calcitonin Gene-Related Peptide, [¹²⁵ I]-, ([¹²⁵ I]-hCGRP), (human)	NEX354
Calcitonin [Tyr ¹²] (Human), [¹²⁵ I]	NEX422
Calcitonin Gene-Related Peptide, - 2-[¹²⁵ I]-iodohistidyl10,(human) Receptor Grade	NEX442
Calcitonin[Tyr ²²] (Salmon), [¹²⁵ I]	NEX423
CCL15, [¹²⁵ I]-, (human, recombinant)	NEX401
CGP 42112A, [¹²⁵ I]-	NEX324
Cholecystokinin Octapeptide, [¹²⁵ I]-, Bolton-Hunter labeled, ([¹²⁵ I]-CCK-8)	NEX203
Chorionic Gonadotropin [¹²⁵ I], ([¹²⁵ I]-hCG), (human)	NEX106
6-Ckine, [¹²⁵ I]-, Bolton-Hunter labeled, (CCL21), (human, recombinant)	NEX387
Complement C3a, [¹²⁵ I]-, Bolton-Hunter labeled, (human)	NEX356
Complement C5a, [¹²⁵ I]-, Bolton-Hunter labeled, (human, recombinant)	NEX250
ω-Conotoxin GVIA (Tyr ²²), [¹²⁵ I]-	NEX239
ω-Conotoxin MVIIC, [¹²⁵ I]-	NEX323
Corticotropin Releasing Factor (Tyr ⁰), [¹²⁵ I]-, (ovine)	NEX217
Corticotropin Releasing Factor (Tyr ⁰), [¹²⁵ I]-, (human, rat)	NEX216
Cortisol-3-(0-carboxymethyl)oximino-(2-[¹²⁵ I], iodohistamine)	NEX435
CTACK, [¹²⁵ I]-, (CCL27), (human, recombinant)	NEX391

Visit www.perkinelmer.com/Toolkit to use our online Fresh Lot Calendar.

Product	Product No.
CXCL16, [¹²⁵ I]-, (human, recombinant)	NEX398
(-)-Cyanopindolol, [¹²⁵ I]iodo-	NEX189
(±)-Cyanopindolol, [¹²⁵ I]iodo-	NEX174
Dendrotoxin-α-[¹²⁵ I]	NEX434
2'-Deoxycytidine-5'-triphosphate, tetraammonium salt, 5-[¹²⁵ I]iodo-	NEX074
(±)-DOI, [¹²⁵ I]-	NEX255
Echistatin [¹²⁵ I] -	NEX439
Eledoisin (Lys ⁴), [¹²⁵ I]-, Bolton-Hunter labeled	NEX218
Endothelin-1 (Tyr ¹³), [¹²⁵ I]-, ([¹²⁵ I]-ET-1), (human, porcine)	NEX259
Eotaxin, [¹²⁵ I]-, (human, recombinant)	NEX314
Epibatidine, [¹²⁵ I]-, ([¹²⁵ I]-IPH)	NEX358
Epidermal Growth Factor, [¹²⁵ I]- (human, recombinant)	NEX428
Epidermal Growth Factor, [¹²⁵ I]-, ([¹²⁵ I]-EGF), (murine)	NEX160
Estradiol-6-(0-carboxymethyl)oximino-(2-[¹²⁵ I], iodohistamine)	NEX438
3,17β-Estradiol, 16α-[¹²⁵ I]iodo-	NEX144 NEX144L
Exendin, [¹²⁵ I]-, (9–39)	NEX335
Fibrinogen (Human), [¹²⁵ I]	NEX430
Fibroblast Growth Factor Basic, [¹²⁵ I]-, ([¹²⁵ I]-FGF basic), (human, recombinant)	NEX268
Follicle Stimulating Hormone, [¹²⁵ I]-, ([¹²⁵ I]-FSH)	NEX173
Fractalkine, [¹²⁵ I]-, (human, recombinant)	NEX368
Galanin, [¹²⁵ I]-, (2–11)	NEX416
Galanin, [¹²⁵ I]-, (human)	NEX333
Galanin, [¹²⁵ I]-, (porcine)	NEX243
Gastric Inhibitory Polypeptide, [¹²⁵ I]-, (human)	NEX402
Gastrin Releasing Peptide (porcine), [¹²⁵ I]-Tyr15-[¹²⁵ I]-GRP(p)	NEX421
Gastrin I (Tyr ¹²), [¹²⁵ I]-, (human)	NEX176
Ghrelin (His), [¹²⁵ I]-, (human)	NEX388
Glucagon-like Peptide-1, [¹²⁵ I]-, ([¹²⁵ I]-GLP-1), (7–36)	NEX308
Glucagon-like Peptide-2, [¹²⁵ I]-, ([¹²⁵ I]-GLP-2)	NEX390
Glucagon, [¹²⁵ I]-, receptor grade	NEX207
Granulocyte Macrophage-Colony Stimulating Factor, [¹²⁵ I]-,	NEX249
GRO Alpha/MGSA, [¹²⁵ I]-	NEX321
Growth Hormone, [¹²⁵ I]-, ([¹²⁵ I]-hGH), (human)	NEX100
Guanosine 3',5'-cyclic phosphoric acid, 2'-O-succinyl, [¹²⁵ I]-iodotyrosine, methyl ester	NEX131
HEAT, [¹²⁵ I]-	NEX182
Hemokinin-1, [¹²⁵ I]-, Bolton-Hunter labeled	NEX414
I309, [¹²⁵ I]-, Bolton-Hunter labeled, (human, recombinant)	NEX364
INSL-3, [¹²⁵ I]-	NEX419
Insulin, [¹²⁵ I]- (human, recombinant)	NEX420
Insulin, [¹²⁵ I]-, (porcine)	NEX104
Insulin, (Tyr ^{A14}), [¹²⁵ I]-, receptor grade, (porcine)	NEX196
Insulin-like Growth Factor-I, [¹²⁵ I]-, ([¹²⁵ I]-IGF-I), (human, recombinant)	NEX241
Insulin-like Growth Factor II (human, recombinant), [¹²⁵ I]	NEX429

Visit www.perkinelmer.com/Toolkit to use our online Fresh Lot Calendar.

Product	Product No.
Interleukin-1 β , [¹²⁵ I]-, ([¹²⁵ I]-IL-1 β), (human, recombinant)	NEX232
Interleukin-2, [¹²⁵ I]-, ([¹²⁵ I]-IL-2), (human, recombinant)	NEX229
Interleukin-6, [¹²⁵ I]-, ([¹²⁵ I]-IL-6), (human, recombinant)	NEX269
Interleukin-8, [¹²⁵ I]-, ([¹²⁵ I]-IL-8), (human, recombinant)	NEX277
Interleukin-8 (IL-8), [¹²⁵ I]-, (human, recombinant) receptor grade	NEX443
Iodoclonidine, p-[¹²⁵ I]-, (2-(2,6-dichloro-4)-[¹²⁵ I]-)	NEX253
Iododeoxyuridine, 5-[¹²⁵ I]-	NEX072
Iodoproxyfan-[¹²⁵ I]	NEX436
Iodosulpride-[¹²⁵ I], (dopamine D2 antagonist)	NEX441
IP-10, [¹²⁵ I]-, Bolton-Hunter labeled, (human, recombinant)	NEX348
I-TAC, [¹²⁵ I]-, (human, recombinant)	NEX376
JE, [¹²⁵ I]-, Bolton-Hunter labeled, (MCP-1, murine, recombinant)	NEX313
Leptin, [¹²⁵ I]-, (human, recombinant)	NEX347
Leptin, [¹²⁵ I]-, (murine, recombinant)	NEX340
Luteinizing Hormone Releasing Hormone (D-Trp ⁶), [¹²⁵ I]-, ([¹²⁵ I]-LH-RH)	NEX365
Luteinizing Hormone Releasing Hormone (Tyr ⁵), [¹²⁵ I]-, ([¹²⁵ I]-LH-RH)	NEX163
(+)-Lysergic Acid Diethylamide, 2-[¹²⁵ I]iodo-, ([¹²⁵ I]-LSD)	NEX199
Mamba Intestinal Toxin-1, [¹²⁵ I]-Bolton-Hunter labeled [¹²⁵ I]-MIT-1	NEX414
Melanin Melanin Concentrating Hormone (Phe ¹³ , Tyr ¹⁹), [¹²⁵ I]-, (Phe ¹³ [¹²⁵ I]Tyr ¹⁹ -MCH), (human, mouse, rat)	NEX375
Melanin Concentrating Hormone, [¹²⁵ I]-, ([¹²⁵ I]-MCH), (human)	NEX373
Melanin Concentrating Hormone-1 Receptor antagonist, [¹²⁵ I]-, ([¹²⁵ I]-hMCH-1R), (human)	NEX406
Melatonin, 2-[¹²⁵ I]iodo-	NEX236
Metastin, [¹²⁵ I]-, (45–54)	NEX395
Monocyte Chemoattractant Protein-1 [¹²⁵ I], Bolton-Hunter labeled, ([¹²⁵ I]-MCP-1), (human, recombinant)	NEX332
MIP-1 α , [¹²⁵ I]-, (human, recombinant)	NEX298
MIP-1 β (Leu ³ , Gly ⁴⁷), [¹²⁵ I]-, (human, recombinant)	NEX299
MIP-3 α , [¹²⁵ I]-, (human, recombinant)	NEX371
MIP-3 β , [¹²⁵ I]-, (human, recombinant)	NEX370
MIT-1, [¹²⁵ I]-, Bolton-Hunter labeled	NEX410
Motilin, [¹²⁵ I]-	NEX378
α -MSH (Nle ⁴ , D-Phe ⁷), [¹²⁵ I]-	NEX352
MT II (His), [¹²⁵ I]-	NEX374
β -Nerve Growth Factor, [¹²⁵ I]-, (human, recombinant)	NEX440
Neurokinin A, [¹²⁵ I]-, ([¹²⁵ I]-Substance K, [¹²⁵ I]-NKA)	NEX252
Neurokinin B (MePhe ⁷ His), [¹²⁵ I]-, ([¹²⁵ I]-NKB)	NEX285
Neuromedin U-25 (Tyr ¹⁸), [¹²⁵ I]-, ([¹²⁵ I]-NMU-25), (porcine)	NEX383
Neuromedin U-8, [¹²⁵ I]-, ([¹²⁵ I]-NMU-8)	NEX392
Neuropeptide B23 (Des-Br), [¹²⁵ I]-, ([¹²⁵ I]-NPB23), (human)	NEX405
Neuropeptide FF (D-Tyr ¹ , N-MePhe ³), [¹²⁵ I]-, ([¹²⁵ I]-NPFF)	NEX381
Neuropeptide S (Tyr ¹⁹), [¹²⁵ I]-, ([¹²⁵ I]-NPS), (human)	NEX411
Neuropeptide W23, [¹²⁵ I]-, ([¹²⁵ I]-NPW23), (human)	NEX403
Neuropeptide Y (Lys ⁴), [¹²⁵ I]-Bolton Hunter labeled, [¹²⁵ I]-NPY, (porcine)	NEX222
Neurotensin (Tyr ³), [¹²⁵ I]-	NEX198
Nociceptin (Tyr ¹⁴), [¹²⁵ I]-	NEX338
Orexin A, [¹²⁵ I]-	NEX367
Ornithine Vasotocin Analog, [¹²⁵ I]-, ([¹²⁵ I]-OVTA)	NEX254

Product	Product No.
Oxytocin (Tyr ²), [¹²⁵ I]-	NEX187
PACAP 27, [¹²⁵ I]-	NEX294
PDGF-BB (h,r), [¹²⁵ I]	NEX433
Pancreatic Polypeptide, [¹²⁵ I]-, (human)	NEX315
Parathyroid Hormone (Nle ^{8,18} , Tyr ³⁴), [¹²⁵ I]-, ([¹²⁵ I]-PTH), (human, 1–34)	NEX397
Parathyroid Hormone amide (Nle ^{8,21} , Tyr ³⁴), [¹²⁵ I]-, ([¹²⁵ I]-PTH amide), (rat, 1–34)	NEX353
Peptide YY (Leu ³¹ , Pro ³⁴), [¹²⁵ I]-, ([¹²⁵ I]-PYY), (porcine)	NEX334
Peptide YY, [¹²⁵ I]-, ([¹²⁵ I]-PYY), (human)	NEX341
Peptide YY, [¹²⁵ I]-, ([¹²⁵ I]-PYY), (porcine)	NEX240
(-)-Pindolol, [¹²⁵ I]iodo-	NEX211
R (+) trans-7-hydroxy-PIPAT, [¹²⁵ I]-	NEX307
Prazosin Analog, [¹²⁵ I]iodoazido-, (Iodoarylazidoprazosin)	NEX219
Prolactin, [¹²⁵ I]-, (rat)	NEX108
Protein A, [¹²⁵ I]-, (human, recombinant)	NEX146 NEX146L
Protein G, [¹²⁵ I]-, Bolton-Hunter labeled, (human, recombinant)	NEX237
ProTx-II, [¹²⁵ I]-, (tarantula)	NEX450
QRFP-43, [¹²⁵ I]-, (human)	NEX408
RANTES, [¹²⁵ I]-, (human, recombinant)	NEX292
H2 Relaxin, [¹²⁵ I]-, Bolton-Hunter labeled	NEX409
H3 Relaxin, [¹²⁵ I]-	NEX418
Resiniferatoxin, [¹²⁵ I]-	NEX394
RTI-121, [¹²⁵ I]-	NEX318
RTI-55, [¹²⁵ I]-	NEX272
S36057 (Tyr), [¹²⁵ I]-	NEX396
SB258585, [¹²⁵ I]	NEX424
Sauvagine (Tyr ⁹), [¹²⁵ I]-	NEX306
SDF-1 α , [¹²⁵ I]-, (human, recombinant)	NEX346
SHU9119, [¹²⁵ I]-	NEX362
Somatostatin-14 (Tyr ¹¹), [¹²⁵ I]-	NEX389
Somatostatin-14 (Tyr ¹¹), [¹²⁵ I]-, (human, recombinant) receptor grade	NEX446
Somatostatin-28, [¹²⁵ I]	NEX447
2'-Spiperone, [¹²⁵ I]iodo-	NEX284
Streptavidin, [¹²⁵ I]-	NEX238
Substance P (Lys ³), [¹²⁵ I]-, Bolton-Hunter labeled	NEX190
Substance P (Tyr ⁸), [¹²⁵ I]-	NEX152
TARC, [¹²⁵ I]-, (human, recombinant)	NEX369
Thyrotropin Releasing Hormone (His ²), [¹²⁵ I]-, ([¹²⁵ I]-TRH)	NEX153
Thyroxine, L-, [¹²⁵ I]-, ([¹²⁵ I]-T ₄)	NEX111
Transferrin, [¹²⁵ I]-, diferric, (human)	NEX212
Transforming Growth Factor β -1, [¹²⁵ I]-, ([¹²⁵ I]-TGF- β 1), (human, recombinant)	NEX267
Triiodothyronine, L-3,3',5'-[¹²⁵ I]-, ([¹²⁵ I]-Reverse T3)	NEX109
Triiodothyronine, L-3,5,3'-[¹²⁵ I]-, ([¹²⁵ I]-T3)	NEX110 NEX110H NEX110X
Tumor Necrosis Factor- α , [¹²⁵ I]-, ([¹²⁵ I]-rTNF α), (human, recombinant)	NEX257
Ubiquitin, [¹²⁵ I]-	NEX404
Urotensin II (Tyr ⁹), [125I]-, (human)	NEX379
Vascular Endothelial Growth Factor, [¹²⁵ I]-, ([¹²⁵ I]-VEGF), (human, recombinant)	NEX328
Vasoactive Intestinal Polypeptide, [¹²⁵ I]-, ([¹²⁵ I]-VIP), (human, porcine, rat)	NEX192
Vasopressin (linear), V _{1A} antagonist (phenylacetyl ¹ , O-Me-D-Tyr ² , Arg ^{6,8} , Tyr ⁹), [¹²⁵ I]-	NEX310
Vasopressin (Tyr ² , Arg ⁸), [¹²⁵ I]-	NEX128
WKYMVm, [¹²⁵ I]-, Bolton-Hunter labeled	NEX386

³H- and ¹⁴C-Labeled Thymidines

Thymidines for Proliferations Studies

Product Name	Specific Activity	Activity Conc. [mCi/mL]	Product No.
To study DNA proliferation rates			
Thymidine, [methyl- ¹⁴ C]- Steri-packaged in an aqueous solution. Not for human use.	40–60 mCi/mmol	0.1	NEC568
Thymidine, [methyl- ¹⁴ C]- Steri-packaged in aqueous solution Not for human use	50-62 mCi/mL	1	NEC568D
Thymidine, [methyl- ³ H]- Steri-packaged in an aqueous solution. Not for human use.	2 Ci/mmol	1	NET027A
Thymidine, [methyl- ³ H]- Steri-packaged in an aqueous solution. Not for human use.	6.7 Ci/mmol	1	NET027
Thymidine, [methyl- ³ H]- Packaged in ethanol:water (7:3). Not for human use	20 Ci/mmol	1	NET027E
Thymidine, [methyl- ³ H]- Steri-packaged in ethanol:water (2:98). Not for human use	23–27 Ci/mmol	1	NET027L
Thymidine, [methyl- ³ H]- Steri-packaged in ethanol:water (2:98). Not for human use	40–60 Ci /mmol	1	NET027W
Thymidine, [methyl- ³ H]- Steri-packaged in an aqueous solution. Not for human use.	20 Ci/mmol	1	NET027X
Thymidine, [methyl- ³ H]- Steri-packaged in an aqueous solution. Not for human use.	70–90 Ci/mmol	1	NET027Z
To study total nucleic acid proliferation rates			
Thymidine, [2- ¹⁴ C]- Steri-packaged in an aqueous solution. Not for human use.	>50 mCi/mmol	0.1	NEC156
Thymidine, [6- ³ H]- Steri-packaged in an aqueous solution. Not for human use.	>10 Ci/mmol	1	NET355

Thymidines for DNA Probe Labeling

Product Name	Specific Activity	Activity Conc. [mCi/mL]	Product No.
Deoxythymidine 5'-triphosphate, tetrasodium salt, [methyl- ³ H]-, Packaged in ethanol:water (1:1).	10–25 Ci/mmol	1	NET221H
Deoxythymidine 5'-triphosphate, tetrasodium salt, [methyl- ³ H]- Packaged in ethanol:water (1:1).	70–90 Ci/mmol	1	NET221X
Deoxythymidine 5'-triphosphate, tetrasodium salt, [methyl- ³ H]- Packaged in 10 mM tricine (pH 7.6).	70–90 Ci/mmol	2.5	NET221A
Deoxythymidine 5'-triphosphate, tetrasodium salt, [methyl, 1',2'- ³ H] Packaged in 10 mM tricine (pH 7.6).	90–120 Ci/mmol	2.5	NET520A

New products being added regularly. Visit www.perkinelmer.com/NewProducts for details.

Radionuclides

Radionuclide	Packaging & Form	Specific Activity	Fresh Lot Availability	Product No.
Calcium-45 Symbol: ^{45}Ca Half Life: 163 d Radiation Type: beta	As calcium chloride in aqueous solution	>10 Ci/g	Every 4 weeks	NEZ013
Chromium-51 Symbol: ^{51}Cr Half Life: 27.7 d Radiation Type: gamma	As chromium chloride in 0.5 M HCl.	>50 Ci/g	Every four weeks	NEZ020
	As sodium chromate in normal saline (pH 8–10). Steri-packaged; not for human use. 5mci/ml	400–1200 Ci/g	Every four weeks	NEZ030
	As sodium chromate in normal saline (pH 8–10). Steri-packaged; not for human use. 1mci/ml	400–1200 Ci/g	Every four weeks	NEZ030S
	As EDTA complex in 0.005 M EDTA (pH 7.0)	>50 Ci/g	Every four weeks	NEZ147
Cobalt-57 Symbol: ^{57}Co Half Life: 271 d Radiation Type: gamma	Packaged in 0.1M HCL	carrier free	Routinely available	NEZ022
Indium-111 Symbol: ^{111}In Half Life: 2.83 d Radiation Types: x-ray, gamma	As indium chloride in 0.05 M HCl. Not for human use.	380–415 Ci/mg	Every Friday	NEZ304 NEZ304A NEZ304B NEZ304C

Radionuclide	Packaging & Form	Specific Activity	Fresh Lot Availability	Product No.	
Iodine-125 Symbol: ^{125}I Half Life: 60.14 d Radiation Types: x-ray, gamma	Packaged in 0.1 M NaOH (pH 12–14)	Carrier Free	Wednesday of every other week	NEZ033	
	100 mCi/mL	Carrier Free	Wednesday of every other week	NEZ033A	
	Packaged in 10^{-5} M NaOH (pH 8–11)	>350 mCi/mL	Carrier Free	Wednesday of every other week	NEZ033H
	Packaged in 0.1 M NaOH (pH 12–14), >350 mCi/mL	Carrier Free	Wednesday of every other week	NEZ033L	
Iodine-131 Symbol: ^{131}I Half Life: 8.04 d Radiation Types: beta, gamma	Packaged in 0.1 M NaOH (pH 12–14).	>5 Ci/mg	Every Monday	NEZ035A	
	Packaged in 0.1 M NaOH	>5 Ci/mg	Every Monday	NEZ035H	
Iron-55 Symbol: ^{55}Fe Half Life: 2.7 y Radiation Type: x-ray	As ferric chloride in 0.5 M HCl.	>3 Ci/g	Routinely available	NEZ043	
Iron-59 Symbol: ^{59}Fe Half Life: 44.6 d Radiation Types: beta, gamma	As ferric chloride in 0.5 M HCl.	>5 Ci/g	Routinely available	NEZ037	
	As ferrous sulfate in 0.05 M H_2SO_4 . Steri-packaged; not for human use.	>5 Ci/g	Routinely available	NEZ049	
Manganese-54 Symbol: ^{54}Mn Half Life: 312 d Radiation Type: gamma	Packaged in 0.5 M HCl.	>20 Ci/g	Routinely available	NEZ040	

Radionuclide	Packaging & Form	Specific Activity	Fresh Lot Availability	Product No.
Phosphorus-32 Symbol: ³² P Half Life: 14.29 d Radiation Type: beta	As disodium phosphate in 1 mL water.	900–1100 mCi/mmol	Every Wednesday	NEX011
	As tetrasodium pyrophosphate in saline.	1–60 Ci/mmol	Routinely available	NEX019
	As orthophosphoric acid in 1 mL water.	8500–9120 Ci/mmol	Every Wednesday	NEX053
	>500 mCi/mL	8500–9120 Ci/mmol	Every Friday	NEX053C
	As orthophosphoric acid in water. 10 mCi (370 MBq)/mL	8500–9120 Ci/mmol	Every Wednesday	NEX053H
	As orthophosphoric acid in water. 150 mCi/mL	8500–9120 Ci/mmol	Every Wednesday	NEX053S
	As orthophosphoric acid in water.			
	As orthophosphoric acid in 1 mL 0.02 M HCl.	8500–9120 Ci/mmol	Every Wednesday	NEX054
	dipotassium phosphate in 1 mL Water	900–1100 Ci/mmol	Routinely Available	NEX055
	As monopotassium phosphate in 1.0 mL water.	900–1100 mCi/mmol	Every Wednesday	NEX060
As monosodium phosphate in 1.0 mL water.	900–1100 mCi/mmol	Every Wednesday	NEX063	
Phosphorus-33 Symbol: ³³ P Half Life: 25.4 d Radiation Type: beta	As orthophosphoric acid in 1.0 mL HCl-free water.	40–158 Ci/mg	Routinely available	NEZ080
Rubidium-86 Symbol: ⁸⁶ Rb Half Life: 18.66 d Radiation Types: beta, gamma	Packaged in water.	>1 Ci/g	Routinely available	NEZ072
Sodium-22 Symbol: ²² Na Half Life: 2.6 y Radiation Types: positron, gamma	As NaCl in water.	100–2000 Ci/g	Routinely available	NEZ081
Strontium-85 Symbol: ⁸⁵ Sr Half Life: 64.85 d Radiation Type: gamma	Packaged in 0.5 M HCl.	>3 Ci/g	Routinely available	NEZ082
Sulfur-35 Symbol: ³⁵ S Half Life: 87.4 d Radiation Type: beta	As sodium sulfate in 1.0 mL water.	250–1000 mCi/mmol	Every 4 weeks	NEX041
	As sodium sulfate in 1.0 mL water.	1050–1600 Ci/mmol	Every 4 weeks	NEX041H
	As sulfuric acid in 1.0 mL water.	1050–1600 Ci/mmol	Every 4 weeks	NEX042
Zinc-65 Radionuclide Symbol: ⁶⁵ Zn Half Life: 244d Radiation Type: beta, gamma	Packaged in 0.5M HCl	>1 Ci/g	Routinely Available	NEZ111

Yttrium-90 Chloride Radionuclides/Lutetium-177 Chloride Radionuclides

Therapeutic Radionuclides

PerkinElmer's Yttrium-90 and Lutetium-177 are being combined with various molecules like monoclonal antibodies and peptides to create potential "Smart Drugs" that can specifically target a number of cancers. Promising therapeutic formulations are currently being investigated in research and clinical trials for several types of cancer such as ovarian, lung, breast, colon, prostate, brain, and non-Hodgkin's lymphoma. Through its worldwide distribution capabilities, PerkinElmer can assure delivery of these short-lived radionuclides to many areas of the world soon after production.

Both Yttrium-90 and Lutetium-177 nuclides feature:

- High purity: low levels of contaminants.
- High concentration: can be diluted to meet specific lab requirements.
- Excellent labeling efficiency: high incorporation.
- Fresh lots weekly: reliable production schedule with daily calibration schedule.
- Convenient daily delivery: next day in the U.S. and 2–3 days in Europe.
- NENSure™ vial packaging: safe and secure; maximizes recovery of material while ensuring minimal personal exposure. Other vials are available upon request.

Yttrium-90 Chloride Radionuclide

For research and investigational purposes only

PerkinElmer produces and distributes ultra-pure Yttrium-90 radionuclide, which is extracted from Strontium-90 using a patented process licensed exclusively to PerkinElmer. Every lot of Yttrium-90 is quality tested to ensure consistency. Documentation of test results at release, such as the ICP analysis for metals contamination, is provided with each shipment.

Product Name	Specific Activity	Calibration Day	Activity Concentration on Calibration Day [mCi/mL]	Product No.
Yttrium-90 Radionuclide	~500 Ci (18.5 TBq)/mg	Monday	Please inquire	NEZ306S000MC
Sterile and non-pyrogenic		Tuesday	Please inquire	NEZ306AS000MC
Weekly fresh lots		Wednesday	Please inquire	NEZ306BS000MC
Half Life: 2.67 d		Thursday	Please inquire	NEZ306CS000MC
Yttrium-90 Radionuclide	~500 Ci (18.5 TBq)/mg	Monday	Please inquire	NEZ306000MC
Radiochemical grade		Tuesday	Please inquire	NEZ306A000MC
Weekly fresh lots		Wednesday	Please inquire	NEZ306B000MC
Half Life: 2.67 d		Thursday	Please inquire	NEZ306C000MC

Lutetium-177 Chloride Radionuclide

For research and investigational purposes only

Lutetium-177 is used in the same way as Yttrium-90; however it may be used in a slightly different manner. Lutetium-177 has a shorter radius of penetration than Yttrium-90, making it an ideal candidate for radioimmunotherapy for smaller, soft tumors. In addition, Lutetium-177 is a beta and gamma emitter. It can be used for therapy and imaging studies unlike Yttrium-90, which is a pure beta emitter and can only be used for therapy. Every lot of Lutetium-177 is quality tested to ensure consistency. Documentation of test results at release, such as the ICP analysis for metals contamination, is provided with each shipment.

Product Name	Specific Activity	Calibration Day	Activity Concentration on Calibration Day [mCi/mL]	Product No.
Lutetium-177 Radionuclide	~20 Ci (0.74 TBq)/μg	Thursday	Please inquire	NEZ307000MC
Radiochemical grade		Friday	Please inquire	NEZ307A000MC
Weekly fresh lots		Monday	Please inquire	NEZ307B000MC
Half Life: 6.71 d		Tuesday	Please inquire	NEZ307C000MC
		Wednesday	Please inquire	NEZ307D000MC

Radioimmunoassay Kits

Our [^3H]- and [^{125}I]- RIA kits are fully validated and contain all reagents required to run your assays. For laboratory use. Research chemicals for research purposes only.

Product Name	Package Size	Product No.
11-Dehydrothromboxane B ₂ [^{125}I]- RIA Kit Shipped ambient. Store at 2–8 °C.	250 assay tubes	NEK042A001KT
6-Keto-Prostaglandin F _{1α} [^{125}I]- RIA Kit Shipped on blue ice. Store at 2–8 °C.	125 assay tubes 250 assay tubes	NEK025001KT NEK025A001KT
Cyclic AMP [^{125}I]- Tracer Plus Carrier Serum (cAMP [^{125}I]- tracer shipped separately.) Shipped ambient. Store at 2–8 °C.	100 assay tubes	NEK035001EA
Cyclic AMP, [^{125}I]- RIA Kit Shipped ambient. Store at 2–8 °C.	200 assay tubes	NEK033001KT
Cyclic GMP, [^{125}I]- RIA Kit Shipped ambient. Store at 2–8 °C.	200 assay tubes	NEX133001KT
Inositol 1,4,5-trisphosphate, [^3H]- Radioreceptor Assay Kit Shipped on blue ice. Store at 2–8 °C.	192 assay tubes	NEK064001KT
Prostaglandin E ₂ [^{125}I]- RIA Kit (c Prostaglandin E ₂ [^{125}I]- tracer shipped separately.) Shipped on blue ice. Store at 2–8 °C.	125 assay tubes 250 assay tubes	NEK020001KT NEK020A001KT
Thromboxane B ₂ [^{125}I]- RIA Kit Shipped on blue ice. Store at 2–8 °C.	125 assay tubes 250 assay tubes	NEK024001KT NEK024A001KT

Technical, Safety & Storage Information

Radiochemicals Classifications

Radiochemicals in this catalog are listed by the full chemical name (salt forms are listed as the parent compound). Following the full chemical name is a bracket, separated from the name by a comma and space. The information within the bracket describes the location and type of radioactive label. The bracket is followed by a hyphen.

Everything between the comma and space referenced above and the hyphen following the bracket would be placed before the chemical name or before the labeled unit in order to convert to the "square bracket preceding" system. For example, Glutamic acid, L-[¹⁴C(U)]- in this catalog may be read as L-[¹⁴C(U)]Glutamic acid.

The isotope employed is designated by its chemical symbol with the mass number shown as a superscript preceding the symbol.

NEN Radiochemicals Packaging

Specifically Labeled Compounds

This designation is used when all labeled positions are identified and the radioactivity at these positions is greater than 95% of the total incorporated into the compound. When more than one position is labeled, uniform or even distribution is not implied.

Uniformly Labeled (U) Compounds

This designation is reserved for compounds labeled in all positions in a uniform or nearly uniform pattern. This category includes compounds prepared by biosynthesis from carbon dioxide, [¹⁴C], or from a uniformly labeled intermediate.

Nominally Labeled (N) Compounds

This designation is used when the method of preparation requires some (usually a significant amount) of the label to be at a specific site or sites, but no further information is available on the extent of labeling (if any) at other positions.

Generally Labeled (G) Compounds

This designation is reserved for compounds (usually tritium-labeled) in which there is a random (i.e., non-uniform and undetermined) distribution of radioactivity at various positions. Under the conditions that lead to random labeling, many potential sites for labeling usually contain no radioactivity.

Follow these precautions when receiving and opening a package containing radiochemicals:

- Inspect all packages upon receipt to ensure that they are free from damage and that surface radiation and contamination are within specified limits.
- Open the package in a designated area, while wearing protective gloves.
- Inspect the contents of the vial and verify the radionuclide, quantity, and compound on the vial label and packing slip.
- When opening the vial, be aware of the potential for overpressure. Carefully open the vial in a fume-hood and monitor to confirm contamination control.

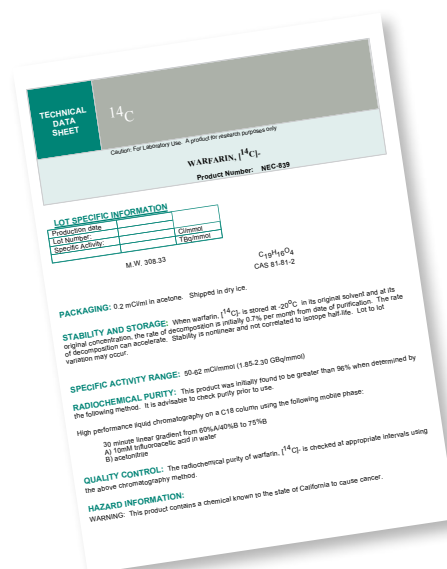

Visit www.perkinelmer.com/NENSure to view our NENSure Packaging video.

Technical Data Accompanying Radiochemicals

PerkinElmer's quality control program includes the preparation of detailed Certificates of Analysis (COA), also known as Technical Data (TD) sheets.

These documents are available online at www.perkinelmer.com/COA and contain the following types of information:

- Initial radiochemical purity
- Chemical purity (where applicable)
- Structural formula with label position (where applicable)
- Method of synthesis (with pertinent references)
- Recommended storage conditions
- Approximate rate of decomposition under these conditions
- Information for purification after prolonged storage

Storage & Handling

PerkinElmer formulates its NEN Radiochemicals to minimize further processing by researchers. However, radiochemicals decompose over time. Therefore, they require careful handling and proper storage. Read the Technical Data sheet carefully before using or storing your NEN Radiochemical.

Here are ways to maximize the use of NEN Radiochemicals:

- Schedule your purchases to avoid prolonged storage, and use the product as soon as possible after taking delivery.
- For radiochemicals packaged in an ampoule, refer to the Technical Data sheet instructions for opening the ampoule, as well as for the subsequent storage of the product.
- Minimize the number of times the primary container is opened, and reseal the container immediately after use. If a compound will be used several times, aliquot the required amounts to separate storage vials.
- Many buffers and salts used in biological systems are harmful to the radiochemical. Use clean syringes and pipettes when withdrawing aliquots from the primary container.
- If the compound is light-sensitive, handle it under a red light and cover the primary container with foil when storing. Or store the compound in the UV-absorbing version of the NENSure vial.
- If the compound is air- or water-sensitive, flush the primary container with argon after use.
- Store at low temperatures, but do not freeze unless specifically recommended on the Technical Data sheet.
- Store at the lowest usable specific activity.
- Store in the most stable chemical form.
- When possible, dissolve the compound in a solvent that has been specially purified. Most common laboratory solvents have trace contaminants that will accelerate radiodecomposition.
- Recheck your labeled compounds for purity at appropriate intervals. Every labeled compound stored for more than six months should be checked for radiopurity; some compounds should be checked more often. If in doubt, reanalyze.

PerkinElmer's Guide to the Safe Handling of Radioactive Materials in Research contains comprehensive information regarding the storage and handling of radiochemicals. To download a copy of this guide visit www.perkinelmer.com/safehandleguide.

Radionuclide Safe Handling Guides

Our Safe Handling Guides contain general safe handling precautions and procedures, as well as physical data and decay charts. Our Safe Handling Guide is located at www.perkinelmer.com/safehandleguide.

While we believe the information to be accurate, regulatory requirements may change and information contained is not tailored to individual needs. Please consult a radiation protection specialist for specific applications.

Common Radiochemical Measurements & Conversions

International System of Units

The International System of Units (Système Internationale, or SI) adopted the becquerel (Bq) as the unit for radiation measurement in 1975, acting on the recommendation of the International Commission of Radiation Units and Measurements (ICRU).

$$1 \text{ Bq} = 1 \text{ disintegration per second} = 2.7 \times 10^{-11} \text{ curie (Ci)}$$

In this catalog's radiochemical product listing, curies are listed first, followed by becquerels, which are shown in parentheses. We have included several tables and formulas to assist you in using your preferred unit of measure.

Common Prefixes for SI Units

These SI prefixes are used to form decimal multiples and submultiples of units.

Prefix	Symbol	Factor
exa	E	10^{18}
penta	P	10^{15}
tera	T	10^{12}
giga	G	10^9
mega	M	10^6
kilo	k	10^3

Prefix	Symbol	Factor
milli	m	10^{-3}
micro	μ	10^{-6}
nano	n	10^{-9}
pico	p	10^{-12}
femto	f	10^{-15}
atto	a	10^{-18}

Conversion Tables & Formulas

SI & Non-SI Unit Conversions

Physical quantity	To convert from	to	Multiply by
Activity	becquerel (Bq)	curie	2.7×10^{-11}
	curie (Ci)	becquerel	3.7×10^{10}
Absorbed dose	gray (Gy)	rad	100
	rad (rad)	gray	0.01
Dose equivalent	sievert (Sv)	rem	100
	rem (rem)	sievert	0.01

Curie to Becquerel Conversions

(Becquerel equivalents from 1 microcurie to 100 curies)

Conversion			
From	To	From	To
μCi	kBq	μCi	kBq

25	925	95	3515
30	1110	100	3700

Millicurie Equivalents

- 1,000 millicuries (mCi) = 1 curie (Ci)
- 1,000 microcuries (μCi) = 1 millicurie (mCi)
- 250 microcuries (μCi) = 0.25 millicurie (mCi)
- 100 microcuries (μCi) = 0.10 millicurie (mCi)
- 50 microcuries (μCi) = 0.05 millicurie (mCi)
- 1 microcurie (μCi) = 0.001 millicurie (mCi)

Activity Equivalents: Becquerel or Curie to DPM to DPS

- 1 becquerel = 1 DPS
- 1 curie = 2.22×10^{12} DPM = 3.7×10^{10} DPS
- 1 millicurie = 2.22×10^9 DPM = 3.7×10^7 DPS
- 1 microcurie = 2.22×10^6 DPM = 3.7×10^4 DPS

Time Equivalents: Day to Minutes to Seconds

- 1 day = 1.44×10^3 mins = 8.64×10^4 secs
- 1 year = 5.26×10^5 mins = 3.16×10^7 secs

Mass Equivalents: Grams to Moles DNA

- 1 μg of 1,000 bp DNA = 1.52 pmole (3.03 pmol of ends)
- 1 μg of pBR322 DNA = 0.36 pmole DNA
- 1 pmole of 1,000 bp DNA = 0.66 μg
- 1 mole of pBR322 DNA = 2.8 μg

Vial Packaging

NENSure Vial Packaging

With the revolutionary NENSure™ packaging system, PerkinElmer established new safety and convenience standards for the shipment of radiochemicals. These include ^{32}P and ^{33}P -labeled nucleotides; ^{32}P , ^{33}P , ^{35}S , ^{125}I and ^{131}I radionuclides; ^{35}S -labeled amino acids; and ^3H -, ^{125}I - and ^{14}C -labeled compounds. NENSure vials seal and reseal positively to ensure safe shipment and storage, allow unobstructed view of the product, and unscrew easily for safe and convenient access.

Each NENSure vial is shipped in a sturdy, easy-to-use container, and is available with an optional integral lead shield. For easy opening, the container lid has an octagonal recess to place over the vial cap. For maximum recovery of product, NENSure vials have a conical plastic or glass V-insert. Light-sensitive compounds are packaged in a UV-absorbing version of the NENSure vial.

Visit www.perkinelmer.com/NENSure to view our NENSure Packaging video.

Using a syringe to remove contents from NENSure vials

A 1.5 inch (38 mm) needle will reach the bottom of the V-insert when inserted directly through the septum of a 0.9 mL or 2.2 mL NENSure vial. A 2.25 inch (57 mm) needle is required for the 5 mL vial. The needle guide was designed to facilitate the use of microsyringes, such as the Hamilton syringe; however, it will accommodate needles of 22 gauge or finer. When using the needle guide, add 0.5 inches (12.7 mm) to the required needle length.

To expose the septum:

1. Unscrew the lid of the outer container.
2. Slide aside or remove the dust cover on the cap.
3. If required, install a charcoal trap directly through the septum.
4. Insert the syringe needle directly through the septum.

To use the needle guide:

1. Slide aside and remove the dust cover.
2. Insert and press the needle guide into the exposed opening.
3. Install a charcoal trap through the side opening of the guide until it just penetrates the septum.
4. Fit the syringe needle into the center hole of the guide and push firmly through the septum into the vial.

Using a pipette to remove contents from NENSure vials

To remove the cap:

1. Unscrew the lid of the outer container.
2. Invert the lid and position it so that the built-in octagonal wrench engages the cap.
3. Turn the wrench counterclockwise to remove the cap.

To replace the cap:

1. Position the cap on the vial.
2. Turn the wrench clockwise to screw the cap in place, ensuring a tight seal.

Installing a charcoal trap in NENSure vials

Prior to removing the vial contents or adding reagents, PerkinElmer recommends installing a charcoal trap (NEX033T) to vent any volatiles that may have built up during shipment. This precautionary step is particularly important when opening ^{35}S -labeled compounds or ^{125}I nuclides.

The charcoal trap can be installed either directly through the septum or through the side opening of the needle guide (refer to figure and instructions).

Other Vial Packaging Information

Combi-Vial

The Combi-Vial is a multidose, wide-mouthed glass vial (5 mL or 10 mL) with a wide base. Each Combi-Vial is enclosed in a double-pouched envelope containing all pertinent data sheets. The double-pouched envelope is inserted into a securitainer (a plastic container with easy-opening tear tab) that contains absorbent material. The securitainer is then packaged in a polystyrene carton that is itself packaged in a corrugated box.

For maximum security against leakage, compounds dissolved in organic solvents are shipped with a multi-dose closure that is plugged with a rubber septum lined with Teflon® fluorocarbon resin. Many of the compounds dissolved in water or dilute acid are shipped with a multi-dose closure sealed with a rubber plug.

- Use a syringe to extract the contents of a Combi-Vial directly through the septum or rubber plug.
- For multiple withdrawals, or withdrawal by pipette, the multi-dose closure can be easily removed by pulling the tear tab.
- Thereafter, the Combi-Vial may be reclosed with the supplied screw-cap.

Combi-V-Vial

The Combi-V-Vial is the standard Combi-Vial with a long, tapered V-insert. V-inserts allow small volumes of liquid to gravitate to the apex of the "V" for maximum accessibility. The Combi-V-Vial is available in two sizes: a 0.7 mL vial made of glass or a 1.0 mL vial made of polypropylene. The Combi-V-Vial is sealed with a specially designed, Teflon®-lined septum.

Screw-Cap Bottle

Used to package many solid products, this 2-dram glass vial features a Teflon®-lined screw-cap closure, and is sealed with tape or a heat-shrink seal.

Serum Bottle

The serum bottle is used for products supplied in large volumes of sterile water. It is shipped with a multidose closure and a rubber plug. Availability is specified in the product listing.

Note: This package is not certified as sterile and pyrogen-free. It is not suitable for organics.

Sealed Through-Joint Ampoules

These glass ampoules are used for packaging volatile solutions that are aliquoted at frequent intervals, such as solutions of

labeled acetic anhydride in benzene. The ampoules feature a standard taper joint and a flame-sealed top. A standard taper cap is supplied to close the ampoule for storage after the seal is broken. Ampoules are suitable for use as reaction vessels when a transfer of the contents is not desired. Ampoules are available in two sizes: a small ampoule for solutions of 0.5 mL or less or a larger ampoule for solutions up to 3 mL. This vessel is calibrated to show the approximate content volume.

Instructions for opening the ampoule are included in the Technical Data sheet that accompanies the product.

Breakseal Tubes

Volatile liquids or gases that are to be transferred into a vacuum system are packaged in glass breakseal tubes. These tubes are specially designed to fit onto a vacuum line prior to opening. They are available in several sizes, according to volume and pressure requirements. A standard taper joint can be attached to the breakseal tube upon request.

Sealed Ampoules

Flame-sealed ampoules with constricted necks are available in a wide variety of sizes, from 1 mL to 100 mL. Instructions for opening the ampoule are included in the Technical Data sheet that accompanies the product.

Custom Packaging

Lyophilization or special containers, solvents, concentrations, or conditions (e.g., packaging under argon or nitrogen) can be provided at additional cost, when available. Additional precautions that substantially reduce product bioburden or enhance product stability can also be provided. Such products are designated "steri-packaged" in this catalog.

PerkinElmer makes no warranty, expressed or implied, with respect to the sterility or pyrogenicity of such products, including any warranty of merchantability or fitness for any particular purpose. These are research products, and are not intended for use in humans. If use in humans is planned, contact your PerkinElmer Customer Care Representative for guidance.

Guide to Opening PerkinElmer Glass Sealed Containers

Introduction

Glass sealed containers are utilized in the packaging of volatile liquids, gases, material sensitive to environmental conditions and small volumes of liquids. PerkinElmer manufactures three basic packages: (1) break-seal tubes which are specifically designed to fit onto vacuum lines prior to opening (Figures A & B), (2) flame sealed glass ampoules with constricted necks for convenient opening (Figures C & D) and (3) flame sealed glass ampoules with septum for convenient access (Figure E). These containers are supplied sealed under vacuum or at atmospheric pressure and procedures for opening must take this into consideration. To minimize problems opening the various types of containers, careful attention to the procedures outlined below is suggested.

A

B

Opening instructions for break-seal tubes (A, B) with vacuum line

1. Gently insert a small cylindrical piece of iron (hammer), preferably sealed in glass to minimize interaction, into the open end of the tube, allowing it to rest on the break-seal.
2. Connect the tube into the vacuum system with a flame seal or connector.
3. Cool the base of the tube by inserting it into liquid nitrogen or dry ice-acetone and evacuate the system. A graded application of vacuum is preferable to prevent unwanted movement of the hammer.
4. Break the seal by raising the hammer with a magnet and allowing it to fall onto the fragile glass tip.
5. Transfer may now be accomplished by standard procedures by opening to the vacuum line.

Opening instructions for break-seal tubes (A, B) without vacuum line (at atmospheric pressure)

1. Cool sample with liquid nitrogen or dry-ice acetone in order to remove material from inside walls and concentrate at the base.
2. If dilution is desired, the solution can be added to the upper part of the break-seal (not all solution added will rinse down into the bottom portion of the break-seal).
3. Carefully break the seal by inserting a glass stirring rod through the open top of the tube, allowing most of the diluents to drain into the bottom portion.
4. Allow sample to return to room temperature. Access to the contents at atmospheric pressure may be made with a pipette or long syringe needle after scoring and snapping the tube below the break-seal.

Guide to Opening PerkinElmer Glass Sealed Containers

Opening instructions for glass ampoules (C, D)

1. Concentrate the contents of the ampoule into the base by either cooling or tapping gently for solids.
2. Type C ampoules are pre-scored at their colored band. They can be opened by holding the ampoule away from your body between the thumb and the forefinger of each hand and snapping briskly (we recommend wearing gloves).
3. Type D ampoules must be scored with a file before snapping. They can be opened by holding the ampoule away from your body between the thumb and forefinger of each hand and snapping briskly (we recommend wearing gloves).

Opening instructions for glass ampoules (E)

1. Concentrate the contents of the ampoule into the base by either cooling or tapping gently for solids.
2. Support the glass ampoule securely in the palm of one hand.
3. With your other hand, take an 18 g needle and pierce the septum on the top of the black cap.
4. Let the needle rest against the glass diaphragm and carefully withdraw the needle 0.25" (making sure to keep the head of the needle between the septum and glass diaphragm).
5. While continuing to support the glass ampoule in the palm of one hand, pierce the glass diaphragm with the needle.

5-Carboxamidotryptamine, [1,2- ³ H]- 20–60 Ci (0.74–2.22 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol under argon in a vial that protects contents from UV light. Shipped in dry ice. Store at -20 °C.	25 µCi (925 kBq)	NET1071025UC
Carnitine hydrochloride, L-[N-methyl- ¹⁴ C]- 40–60 mCi (1.48–2.22 GBq)/mmol 0.1 mCi (3.7 MBq)/mL Steri-packaged in an aqueous solution in a silanized vial. Not for human use. Shipped blue ice. Store at 2–8 °C.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEC797010UC NEC797050UC
Carnitine hydrochloride, L-[methyl- ³ H]- 60–86 Ci (2.22–3.18 TBq)/mmol 1.0 mCi (37 MBq)/mL Packaged in ethanol:water (1:1) Shipped in dry ice. Store at -20°C.	250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET1181250UC NET1181001MC
CCK-8 See Cholecystokinin octapeptide.		
CCL15, [¹²⁵ I]-, (human, recombinant) 2000–2800 Ci (74–104 TBq)/mmol Packaged in 0.05 M sodium acetate, 50 mM N-acetylmethionine, 5% sucrose and 0.25% BSA (pH 4.0). Shipped in dry ice. Store at -20 °C. Fresh upon request.	10 µCi(370kBq) 25 µCi (925 kBq)	NEX401010UC NEX401025UC
(-)-CGP-12177, [5,7- ³ H]- 30–60 Ci (1.11–2.22 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol under nitrogen in a silanized vial. Shipped in dry ice. Store at -20 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET1061025UC NET1061250UC NET1061001MC
CGP 39653, [propyl-2,3, ³ H]- 20–50 Ci (0.74–1.85 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol:water (1:9) under nitrogen in a silanized vial. Shipped in dry ice. Store at -20 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET1050025UC NET1050250UC NET1050001MC
CGP 42112A, [¹²⁵ I]- 2200 Ci (81.4 TBq)/mmol Packaged lyophilized from phosphate-buffered saline (pH 7.2) containing glycine and BSA. Shipped ambient. Store at 2–8 °C. Fresh lot: Third Monday of even months.	5 µCi (185 kBq) 25 µCi (925 kBq)	NEX324005UC NEX324025UC
CGRP See Calcitonin Gene-Related Peptide.		
CGS 21680, [carboxyethyl- ³ H(N)]- 30–60 Ci (1.11–2.22 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol:water (70:30) under nitrogen in a silanized vial. Shipped in dry ice. Store at -20 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET1021025UC NET1021250UC NET1021001MC

Ci-Co

Product	Size	Product No.
Citric acid, [1,5- ¹⁴ C]- 100–124 mCi (3.7–4.6 GBq)/mmol 0.05 mCi (1.85 MBq)/mL Steri-packaged in ethanol:water (2:98). Shipped in blue ice. Store at 4°C.	50 µCi (1.85 MBq) 250 µCi (9.25 MBq)	NEC160050UC NEC160250UC
Citrulline, L-[ureido- ¹⁴ C]- 40–60 mCi (1.48–2.22 GBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in ethanol:water (1:1). Shipped ambient. Store at 2–8 °C.	50 µCi (1.85 MBq) 250 µCi (9.25 MBq)	NEC214050UC NEC214250UC
6-Ckine, [¹²⁵ I]-, Bolton-Hunter labeled, (CCL21), (human, recombinant) 60–176 µCi (2.2–6.5 MBq)/µg Packaged in 50 mM sodium acetate with 5.0% sucrose and 0.25% BSA. Shipped ambient. Store at -20 °C. Fresh upon request.	10 µCi (370 kBq) 25 µCi (925 kBq)	NEX387010UC NEX387025UC
Clonidine hydrochloride, [benzene ring- ³ H]- 50–80 Ci (1.85–2.96 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol:water (7:3) under nitrogen in a vial that protects contents from UV light. Shipped in dry ice. Store at -20 °C.	250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET613250UC NET613001MC
CMP-N-Acetyl-Neuraminic acid See Cytidine 5'-monophosphate, sialic acid.		
CMP-sialic acid See Cytidine 5'-monophosphate, sialic acid.		
Cobalt-57 Radionuclide > 1 Ci (37 MBq)/g Shipped ambient. Store ambient Half life: 271 days	500 µCi (18.5 MBq) 1 mCi (37 MBq) 2 mCi (74 MBq) 5 mCi (185 MBq) 10 mCi (370 MBq)	NEZ022500UC NEZ022001MC NEZ022002MC NEZ022005MC NEZ022010MC
Cocaine, levo-[benzoyl-3,4- ³ H(N)]- 20–50 Ci (0.74–1.85 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol under nitrogen in a vial that protects contents from UV light. Shipped in dry ice. Store at -20 °C.	100 µCi (3.7 MBq) 250 µCi (9.25 MBq)	NET510100UC NET510250UC
Coenzyme A See specific fatty acid.		
Colchicine, [ring C, methoxy- ³ H]- 60–87 Ci (2.22–3.22 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol under nitrogen in a vial that protects contents from UV light. Shipped ambient. Store at -20 °C.	250 µCi (9.25 MBq)	NET189250UC
Complement C3a, [¹²⁵ I]-, Bolton-Hunter labeled, (human) 2200 Ci (81.4 TBq)/mmol Packaged in phosphate-buffered saline (pH 6.0) containing sucrose, BSA and a stabilizer. Shipped in dry ice. Store at -20 °C. Fresh lot: First Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX356010UC NEX356050UC

Product	Size	Product No.
Complement C5a, [¹²⁵ I]-, Bolton-Hunter labeled, (human, recombinant) 2200 Ci (81.4 TBq)/mmol Packaged in saline (pH 6.0) containing sucrose, BSA and a stabilizer. Shipped in dry ice. Store at -20 °C. Fresh lot: Third Monday of each month.	5 µCi (185 kBq) 10 µCi (370 kBq) 25 µCi (925 kBq)	NEX250005UC NEX250010UC NEX250025UC
ω-Conotoxin GVIA (Tyr ²²), [¹²⁵ I]- 2200 Ci (81.4 TBq)/mmol Packaged lyophilized from phosphate-buffered saline (pH 5.2) containing glycine and BSA. Shipped ambient. Store at 2–8 °C. Fresh lot: Second Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX239010UC NEX239050UC
ω-Conotoxin MVIIc, [¹²⁵ I]- 2200 Ci (81.4 TBq)/mmol Packaged lyophilized from phosphate-buffered saline (pH 5.2) containing glycine, BSA and a stabilizer. Shipped ambient. Store at 2–8 °C. Fresh lot: Fourth Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX323010UC NEX323050UC
Cordycepin 5'-triphosphate See Deoxyadenosine 5'-triphosphate, tetrasodium salt.		
Corticosterone, [1,2,6,7- ³ H(N)]- 70–100 Ci (2.59–3.7 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol. Shipped in dry ice. Store at -20 °C.	250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET399250UC NET399001MC
Corticotropin Releasing Factor (Tyr ⁰), [¹²⁵ I]-, (ovine) 2200 Ci (81.4 TBq)/mmol Packaged in water:acetonitrile (65:35) containing TFA, BSA and 2-mercaptoethanol. Shipped ambient. Store at 2–8 °C. Fresh lot: Second Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX217010UC NEX217050UC
Corticotropin Releasing Factor (Tyr ⁰), [¹²⁵ I]-, (human, rat) 2200 Ci (81.4 TBq)/mmol Packaged in water:acetonitrile (65:35) containing TFA, BSA and 2-mercaptoethanol. Shipped ambient. Store at 2–8 °C. Fresh lot: Second Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX216010UC NEX216050UC
Cortisol See Hydrocortisone for ³ H label		
Cortisol-3-(0-carboxymethyl)oximino-(2-[¹²⁵ I], iodohistamine) 2200 Ci (81.4TBq)/mmol Packaged in ethanol. Shipped Dry Ice. Store at -20°C or below Fresh Lot: Third Monday of each month	10µCi (370kBq) 25µCi (925kBq)	NEX435010UC NEX435025UC
Cortisone, [1,2- ³ H(N)]- 30–60 Ci (1.11–2.22 TBq)/mmol 1.0 mCi (37 MBq)/mL Packaged in ethanol. Shipped in dry ice. Store under nitrogen at –20°C.	1 mCi (37 MBq)	NET1178001MC
Coumarin, 7-ethoxy, [3- ¹⁴ C]- >50 mCi (1.85 GBq)/mmol Solid Shipped in dry ice. Store at –20°C.	50 µCi (1.85 MBq)	NEC836050UC
CP 55940, [side chain-2,3,4- ³ H(N)]- 100–180 Ci (3.7–6.66 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol under nitrogen in a silanized vial. Shipped in dry ice. Store at -20 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET1051025UC NET1051250UC NET1051001MC

Guanosine 5'-triphosphate, [α - 32 P]-, (EasyTides) 3000 Ci (111 TBq)/mmol 10 mCi (370 MBq)/mL Packaged in 50 mM tricine buffer (pH 7.6) with green dye. Shipped in lead. Shipped ambient. Store at 2–8 °C or below. Fresh lot: Every Thursday.	250 μ Ci (9.25 MBq) 1 mCi (37 MBq)	NEG506H250UC NEG506H001MC
Guanosine 5'-triphosphate, [α - 32 P]- 3000 Ci (111 TBq)/mmol 10 mCi (370 MBq)/mL Packaged in 50 mM tricine buffer (pH 7.6). Lead-free packaging. Shipped in dry ice. Store at -20 °C or below. Fresh lot: Every Thursday.	250 μ Ci (9.25 MBq) 500 μ Ci (18.5 MBq) 1 mCi (37 MBq)	BLU006H250UC BLU006H500UC BLU006H001MC
Guanosine 5'-triphosphate, [α - 32 P]- 3000 Ci (111 TBq)/mmol 10 mCi (370 MBq)/mL Packaged in 50 mM tricine buffer (pH 7.6). Shipped in lead. Shipped in dry ice. Store at -20 °C or below. Fresh lot: Every Thursday.	250 μ Ci (9.25 MBq) 500 μ Ci (18.5 MBq) 1 mCi (37 MBq)	NEG006H250UC NEG006H500UC NEG006H001MC
Guanosine 5'-triphosphate, [γ - 32 P]-, (EasyTides) 6000 Ci (222 TBq)/mmol 10 mCi (370 MBq)/mL Packaged in 50 mM tricine buffer (pH 7.6) with green dye. Lead-free packaging. Shipped ambient. Store at 2–8 °C or below. Fresh lot: Every Thursday.	250 μ Ci (9.25 MBq)	BLU504Z250UC
Guanosine 5'-triphosphate, [γ - 32 P]-, (EasyTides) 6000 Ci (222 TBq)/mmol 10 mCi (370 MBq)/mL Packaged in 50 mM tricine buffer (pH 7.6) with green dye. Shipped in lead. Shipped ambient. Store at 2–8 °C or below. Fresh lot: Every Thursday.	250 μ Ci (9.25 MBq)	NEG504Z250UC
Guanosine 5'-triphosphate, [γ - 32 P]- 6000 Ci (222 TBq)/mmol 10 mCi (370 MBq)/mL Packaged in 10 mM tricine buffer (pH 7.6). Lead-free packaging. Shipped in dry ice. Store at -20 °C or below. Fresh lot: Every Thursday.	250 μ Ci (9.25 MBq)	BLU004Z250UC
Guanosine 5'-triphosphate, [γ - 32 P]- 6000 Ci (222 TBq)/mmol 10 mCi (370 MBq)/mL Packaged in 10 mM tricine buffer (pH 7.6). Shipped in lead. Shipped in dry ice. Store at -20 °C or below. Fresh lot: Every Thursday.	250 μ Ci (9.25 MBq)	NEG004Z250UC
Guanosine 5'-triphosphate, [α - 33 P]-, (EasyTides) 3000 Ci (111 TBq)/mmol 10 mCi (370 MBq)/mL Packaged in 50 mM tricine buffer (pH 7.6) with amber gold dye. Shipped ambient. Store at 2–8 °C or below. Fresh lot: Every Other Friday.	100 μ Ci (3.7 MBq) 250 μ Ci (9.25 MBq) 1 mCi (37 MBq)	NEG606H100UC NEG606H250UC NEG606H001MC
Guanosine diphosphate fucose, [fucose- 14 C(U)]- >200 mCi (7.4 GBq)/mmol 0.01 mCi (0.37 MBq)/mL Packaged in ethanol:water (1:1). Shipped in dry ice. Store at -20 °C.	5 μ Ci (185 kBq) 25 μ Ci (925 kBq)	NEC640005UC NEC640025UC

Gu-Hm

Product	Size	Product No.
Guanosine diphosphate fucose, [fucose-2- ³ H(N)]- 15–35 Ci (0.555–1.29 TBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in ethanol:water (7:3). Shipped in dry ice. Store at -20 °C.	50 µCi (1.85 MBq) 250 µCi (9.25 MBq)	NET989050UC NET989250UC
Guanosine diphosphate mannose, [mannose- ¹⁴ C(U)]- >200 mCi (7.4 GBq)/mmol 0.2 mCi (0.74 MBq)/mL Packaged in ethanol:water (7:3). Shipped in dry ice. Store at -20 °C.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEC536010UC NEC536050UC
H2 or H3 Relaxin See Relaxin.		
HCG See Chorionic Gonadotropin, (human).		
HEAT, [¹²⁵ I]- 2200 Ci (81.4 TBq)/mmol Packaged in ethanol:phosphate buffer (1:1). Shipped in dry ice. Store at -20 °C Fresh lot: Third Monday of each month.	100 µCi (3.7 MBq) 250 µCi (9.25 MBq)	NEX182100UC NEX182250UC
Hemicholinium-3, diacetate salt, [methyl- ³ H]- >120 Ci (4.44 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol in a silanized vial. Shipped in dry ice. Store at -80 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq)	NET884025UC NET884250UC
Hemokinin-1, [¹²⁵ I]-, Bolton-Hunter labeled 2200 Ci (81.4 TBq)/mmol Packaged in 100 mM triethylammonium phosphate (pH 3.5):100% acetonitrile (73:27) with 0.35% 2-mercaptoethanol. Shipped in dry ice. Store at -20 °C. Fresh lot: First Monday of each month.	10 µCi (370 kBq) 25 µCi (925 kBq)	NEX414010UC NEX414025UC
Heparin, sodium salt, [³ H(G)]- 0.2–1 mCi (7.4–37 MBq)/mg Biological activity is >120 units/mg. Packaged as a crystalline solid in a screw-cap bottle. Shipped ambient. Store at 2–8 °C.	1 mCi (37 MBq)	NET476001MC
Hexadecyl-2-acetyl-sn-glycerol-3-phosphorylcholine, 1-O-[acetyl- ³ H(N)]- 10–30 Ci (0.37–1.11 TBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in ethanol in a silanized vial. Shipped in dry ice. Store at -20 °C.	250 µCi (9.25 MBq)	NET910250UC
Hexadecyl PAF See Hexadecyl-2-acetyl-sn-glycerol-3-phosphorylcholine.		
HGH See Growth Hormone, (human).		
Histamine dihydrochloride, [ring, methylenes- ³ H(N)]- 10–40 Ci (0.37–1.48 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol:0.01 HCl (1:1) under nitrogen in a vial that protects contents from UV light. Shipped ambient. Store at -20 °C.	250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET732250UC NET732001MC
HMG-CoA See Hydroxy-3-methylglutaryl coenzyme A.		

Hy-If

Product	Size	Product No.
Hydrocortisone, [1,2,6,7- ³ H(N)]-, (cortisol, [1,2,6,7- ³ H(N)]-) 70–100 Ci (2.59–3.7 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol. Shipped in dry ice. Store at -20 °C.	250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET396250UC NET396001MC
Hydroxy-3-methylglutaryl coenzyme A, DL-3-[glutaryl-3- ¹⁴ C]- 40–60 mCi (1.48–2.22 GBq)/mmol 0.02 mCi (0.74 MBq)/mL Packaged in an aqueous solution (pH ~5.0). Shipped in dry ice. Store at -20 °C.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEC642010UC NEC642050UC
Hydroxycholecalciferol See Hydroxyvitamin D ₃ .		
Hydroxycholesterol, 25-[26,27- ³ H]- 75–87 Ci (2.78–3.22 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol. Shipped in dry ice. Store at -20 °C.	250 µCi (9.25 MBq)	NET674250UC
Hydroxytryptamine binoxalate, 5-[2- ¹⁴ C]-, (Serotonin binoxalate) 40–60 mCi (1.48–2.22 GBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in ethanol:water (2:98) under argon in a vial that protects contents from UV light. Shipped ambient. Store at 2–8 °C.	50 µCi (1.85 MBq) 250 µCi (9.25 MBq)	NEC225050UC NEC225250UC
Hydroxytryptamine creatinine sulfate, 5-[1,2- ³ H(N)]-, (Serotonin) 15–30 Ci (0.555–1.11 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol:water (2:98) under argon in a vial that protects contents from UV light. Shipped on blue ice. Store at 2–8 °C.	1 mCi (37 MBq) 5 mCi (185 MBq)	NET498001MC NET498005MC
5-Hydroxytryptamine Trifluoroacetate, [³ H]- >100 Ci (3.70 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in Water:ethanol:TFA:mercaptoethanol (98:2:0.1:0.2) solution under nitrogen. Shipped in dry ice. Store at -20 °C	250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET1167250UC NET1167001MC
Hydroxyvitamin D ₃ , 25-[26,27- ³ H]- 155–175 Ci (5.73–6.47 TBq)/mmol 0.01 mCi (0.37 MBq)/mL Packaged in toluene under nitrogen in foil-wrapped ampoule that protects contents from UV light. Shipped in dry ice. Store at -20 °C.	5 µCi (185 kBq) 25 µCi (925 kBq) 50 µCi (1.85 MBq)	NET349005UC NET349025UC NET349050UC
Hypoxanthine monohydrochloride, [³ H(G)]- 10–30 Ci (0.37–1.11 TBq)/mmol 1 mCi (37 MBq)/mL Steri-packaged in an aqueous solution. Not for human use. Shipped ambient. Store at 2–8 °C.	1 mCi (37 MBq) 5 mCi (185 MBq)	NET177001MC NET177005MC
I309, [¹²⁵ I]-, Bolton-Hunter labeled, (human, recombinant) 2200 Ci (81.4 TBq)/mmol Packaged lyophilized from sodium acetate buffer (pH 4.2) containing sucrose and BSA. Shipped ambient. Store at -20 °C (after reconstitution). Fresh upon request.	5 µCi (185 kBq) 25 µCi (925 kBq)	NEX364005UC NEX364025UC
Ifenprodil, [phenyl- ³ H]- 40–80 Ci (1.48–2.96 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol. Shipped in dry ice. Store at -20 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq)	NET1089025UC NET1089250UC

Product	Size	Product No.
IL See Interleukin.		
Imipramine hydrochloride, [benzene ring- ³ H(N)]- 40–70 Ci (1.48–2.59 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol under nitrogen in a vial that protects contents from UV light. Shipped in dry ice. Store at -20 °C.	250 µCi (9.25 MBq)	NET576250UC
Indium-111 radionuclide 380–415 Ci (14.1–15.4 TBq)/mg Packaged as indium chloride in 0.05 M HCl. Shipped Ambient. Store Ambient. Half life: 2.83 days Fresh lot: Every Friday; Monday calibration day.	Custom Filled	NEZ304000MC
Indium-111 radionuclide 380–415 Ci (14.1–15.4 TBq)/mg Packaged as indium chloride in 0.05 M HCl. Shipped Ambient. Store Ambient. Half life: 2.83 days Fresh lot: Every Friday; Tuesday calibration day.	Custom Filled	NEZ304A000MC
Indium-111 radionuclide 380–415 Ci (14.1–15.4 TBq)/mg Packaged as indium chloride in 0.05 M HCl. Shipped Ambient. Store Ambient. Half life: 2.83 days Fresh lot: Every Friday; Wednesday calibration day.	Custom Filled	NEZ304B000MC
Indium-111 radionuclide 380–415 Ci (14.1–15.4 TBq)/mg Packaged as indium chloride in 0.05 M HCl. Shipped Ambient. Store Ambient. Half life: 2.83 days Fresh lot: Every Friday; Thursday calibration day.	Custom Filled	NEZ304C000MC
Indolylacetic acid, 3-, [5- ³ H(N)]- 15–30 Ci (0.56–1.11 TBq)/mmol 1.0 mCi (37 MBq)/mL Packaged in ethanol. Shipped in dry ice. Store at -20°C.	250 µCi (9.25 MBq)	NET1175250UC
Indomethacin, [2- ¹⁴ C]- 20–40 mCi (0.74–1.48 GBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in ethanol. Shipped in dry ice. Store at -20 °C.	50 µCi (1.85 MBq)	NEC786050UC
Inositol See Phosphatidylinositol 4,5-bisphosphate.		
Inositol, myo-[1,2- ³ H(N)]- 45–80 Ci (1.66–2.96 TBq)/mmol 1 mCi (37 MBq)/mL Steri-packaged in an aqueous solution. Not for human use. Shipped ambient. Store at 2–8 °C.	250 µCi (9.25 MBq) 1 mCi (37 MBq) 5 mCi (185 MBq)	NET906250UC NET906001MC NET906005MC
Inositol, myo-[2- ³ H(N)]- 10–25 Ci (370–925 GBq)/mmol 1 mCi (37 MBq)/mL Steri-packaged in an aqueous solution. Not for human use. Shipped ambient. Store at 2–8 °C.	250 µCi (9.25 MBq) 1 mCi (37 MBq) 5 mCi (185 MBq)	NET114A250UC NET114A001MC NET114A005MC

In-In

Product	Size	Product No.
Inositol, myo-[2- ³ H(N)]- 10–25 Ci (370–925 GBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol:water (9:1). Shipped ambient. Store at -20 °C.Product	250 µCi (9.25 MBq) 1 mCi (37 MBq) 5 mCi (185 MBq)	NET114250UC NET114001MC NET114005MC
Inositol, myo-[2- ³ H] with PT6-271 10-20 Ci (0.37-0.74 TBq)/mmol 1.0 mCi (37 MBq)/ml Steri-packaged in aqueous solution containing a PT6-271 tablet. Shipped ambient. Store at 2°C	1 mCi (37 MBq) 5 mCi (185 MBq)	NET1156001MC NET1156005MC
Inositol-1,3,4,5-tetrakisphosphate, D-[inositol-1- ³ H(N)]- 15–30 Ci (0.555–1.11 TBq)/mmol 0.01 mCi (0.37 MBq)/mL Packaged in a 50 mM ammonium phosphate buffer (pH 8.0) under nitrogen in a silanized vial. Shipped on blue ice. Store at 2–8 °C.	2 µCi (74 kBq) 5 µCi (185 kBq)	NET941002UC NET941005UC
Inositol-1,4,5-trisphosphate, D-[inositol-1- ³ H(N)]- 15–30 Ci (0.555–1.11 TBq)/mmol 0.01 mCi (0.37 MBq)/mL Packaged in a 10 mM ammonium phosphate buffer (pH 8.0) under nitrogen in a silanized vial. Shipped on blue ice. Store at 2–8 °C.	1 µCi (37 kBq) 5 µCi (185 kBq)	NET911001UC NET911005UC
INSL-3, [¹²⁵ I]- 75–214 µCi (2.78–7.92 MBq)/µg Packaged in 50mM sodium acetate, pH 4, 50 mM ascorbic acid, 50mM N-acetylmethionine, 5% sucrose and 0.25% BSA Shipped in dry ice. Store at -20 °C. Fresh lot: First Monday of each month.	10 µCi (370 kBq) 25 µCi (925 kBq)	NEX419010UC NEX419025UC
Insulin, [¹²⁵ I]-(human, recombinant) 2200 Ci (81.4TBq)/mmol Packaged lyophilized Shipped Dry Ice. Store at °4C or below. Fresh Lot: Second Monday of each month	10µCi (370kBq) 50µCi (1.85MBq)	NEX420010UC NEX420050UC
Insulin, [¹²⁵ I]-, (porcine) 80–120 µCi (2.96–4.44 MBq)/µg Packaged lyophilized from sodium phosphate buffer containing glycine, BSA and Trasylol®. Shipped ambient. Store at 2–8 °C. Fresh lot: Second Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX104010UC NEX104050UC
Insulin (TyrA ¹⁴), [¹²⁵ I]-, receptor grade, (porcine) 2200 Ci (81.4 TBq)/mmol Packaged in phosphate-buffered saline containing glycine, BSA and Trasylol®. Shipped in dry ice. Store at -20 °C. Fresh lot: Fourth Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX196010UC NEX196050UC
Insulin-like Growth Factor-I, [¹²⁵ I]-, ([¹²⁵ I]-IGF-I), (human, recombinant) 1630–2800 Ci (60.3–103 TBq)/mmol Packaged lyophilized from phosphate-buffered saline (pH 5.2) containing glycine and BSA. Shipped ambient. Store at 2–8 °C. Fresh lot: Third Monday of each month.	5 µCi (185 kBq) 25 µCi (925 kBq)	NEX241005UC NEX241025UC
Insulin-like Growth Factor II (human, recombinant), [¹²⁵ I] 2200 Ci (81.4TBq)/mmol Packaged lyophilized Shipped ambient. Store at °4C or below. Fresh Lot: Second Monday of each month	5µCi (185kBq) 25µCi (925kBq)	NEX429005UC NEX429025UC

Product	Size	Product No.
Interleukin-1 β , [¹²⁵ I]-, ([¹²⁵ I]-IL-1 β), (human, recombinant) 80–180 μ Ci (2.96–6.66 MBq)/ μ g Packaged in phosphate-buffered saline containing gelatin and 10% glycerin. Shipped in dry ice. Store at -20 °C. Fresh lot: First Monday of each month.	5 μ Ci (185 kBq)	NEX232005UC
	10 μ Ci (370 kBq)	NEX232010UC
	25 μ Ci (925 kBq)	NEX232025UC
Interleukin-2, [¹²⁵ I]-, ([¹²⁵ I]-IL-2), (human, recombinant) 20–50 μ Ci (0.74–1.85 MBq)/ μ g Packaged in acetonitrile:2-propanol:water (40:2:58) containing sodium perchlorate, calcium chloride, TFA and BSA. Shipped in dry ice. Store at -20 °C. Fresh lot: Second Monday of each month.	5 μ Ci (185 kBq)	NEX229005UC
	10 μ Ci (370 kBq)	NEX229010UC
	25 μ Ci (925 kBq)	NEX229025UC
Interleukin-6, [¹²⁵ I]-, ([¹²⁵ I]-IL-6), (human, recombinant) 68–160 μ Ci (2.51–5.92 MBq)/ μ g Packaged in sodium phosphate buffer (pH 6.8) containing sucrose, BSA and a stabilizer. Shipped in dry ice. Store at -20 °C. Fresh lot: Third Monday of each month.	5 μ Ci (185 kBq)	NEX269005UC
	25 μ Ci (925 kBq)	NEX269025UC
Interleukin-8, [¹²⁵ I]-, ([¹²⁵ I]-IL-8), (human, recombinant) 2200 Ci (81.4 TBq)/mmol Packaged in solution of sodium acetate buffer (pH 4.2) containing sucrose and BSA. Shipped ambient. Store at 2–8 °C. Fresh lot: Third Monday of each month.	5 μ Ci (185 kBq)	NEX277005UC
	25 μ Ci (925 kBq)	NEX277025UC
	100 μ Ci (3.7 MBq)	NEX277100UC
Interleukin-8 (IL-8), [¹²⁵ I]-, (human, recombinant) receptor grade 2200 Ci (81 TBq)/mmol Lyophilized from a citric acid solution (0.01 M) containing lactose (5%), BSA (0.25%), and aprotinin (0.00751%). Packaged in TPX plastic vials. Shipped in dry ice. Store at 4°C or lower. Fresh lot: Fourth Monday of each month.	10 μ Ci (370 kBq)	NEX443010UC
	25 μ Ci (925 kBq)	NEX443025UC
Inulin, carboxyl-, [carboxyl- ¹⁴ C]- 1–3 mCi (37–111 MBq)/g Packaged as a crystalline solid in a screw-cap bottle. Shipped ambient. Store at -20 °C.	50 μ Ci (1.85 MBq)	NEC164A050UC

Sodium bicarbonate, [¹⁴ C]- 40–60 mCi (1.48–2.22 GBq)/mmol 1 mCi (37 MBq)/mL Steri-packaged in 1.0 mL aqueous solution (pH 9.5) in a sealed glass ampoule. Not for human use. Shipped ambient. Store at 2–8 °C.	1 mCi (37 MBq) 5 mCi (185 MBq)	NEC086H001MC NEC086H005MC
Sodium borohydride, [³ H]- 5–15 Ci (185–555 GBq)/mmol Packaged as a crystalline solid under nitrogen in a silanized sealed ampoule. Shipped ambient. Store at -20 °C.	100 mCi (3.7 GBq)	NET023H100MC
Sodium cyanide, [¹⁴ C]- 40–60 mCi (1.48–2.22 GBq)/mmol Packaged as a crystalline solid, <10% alkali, in a vial that protects contents from UV light. Shipped ambient. Store at -20 °C.	1 mCi (37 MBq)	NEC477B001MC
Sodium-22 radionuclide 100–2000 Ci (3.7–74 TBq)/g Packaged as NaCl in water. Shipped ambient. Store ambient. Half life: 2.6 years	100 µCi (3.7 MBq) 500 µCi (18.5 MBq) 1 mCi (37 MBq) 2 mCi (74 MBq)	NEZ081100UC NEZ081500UC NEZ081001MC NEZ081002MC
Sodium tetrahydridoborate See Sodium borohydride.		
Somatomedin C See Insulin-like Growth Factor.		
Somatostatin 14 (Tyr ¹¹), [¹²⁵ I]- 2200 Ci (81.4 TBq)/mmol Packaged lyophilized from 0.04 M sodium phosphate, 1 M glycine, 0.2 M sodium chloride, 0.25% BSA and 500 KIU/mL Trasylol® (pH 7.2). Shipped ambient. Store at 2–8 °C. Fresh lot: Fourth Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX389010UC NEX389050UC
Somatostatin-14 (Tyr ¹¹), [¹²⁵ I]-, (human, recombinant) receptor grade 2200 Ci (81 TBq)/mmol Shipped in a solution containing HPLC solvent and sodium acetate (50 mM, pH 4.5), sodium chloride (150 mM), sucrose (5%), ascorbic acid (0.2%), N-acetylmethionine (0.2%), and BSA (0.25%) in TPX plastic. Shipped in dry ice. Store at -20°C or lower. Fresh lot: Third Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX446010UC NEX446050UC
Somatostatin-28 [¹²⁵ I] –Leu8, D-Trp22, Tyr25 2200 Ci (81.4 TBq)/mmol Packaged in a solution containing HPLC solvent as well as sodium phosphate (50 mM, pH 7.4), sucrose (5%), and BSA (0.25%). Shipped in dry ice. Store at -20°C. Fresh lot: Second Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX447010UC NEX447050UC
Spermidine trihydrochloride, [terminal methylenes- ³ H(N)]- >15 Ci (555 GBq)/mmol 1 mCi (37 MBq)/mL Packaged under nitrogen in 0.01 N HCl. Shipped ambient. Store at 2–8 °C.	1 mCi (37 MBq) 5 mCi (185 MBq)	NET522001MC NET522005MC
Sphingomyelin [choline methyl- ³ H]-, (egg) 60–90 Ci (2.22–3.33 TBq)/mmol 0.1 mCi (37 MBq)/mL Packaged in toluene:methanol (1:1). Shipped in dry ice. Store at -20 °C.	10 µCi (370 kBq) 50 µCi (1.85 MBq) 250 µCi (9.25 MBq)	NET1134010UC NET1134050UC NET1134250UC

Product	Size	Product No.
Sphingomyelin, [choline-methyl- ¹⁴ C]-, (bovine) 40–60 mCi (1.48–2.22 GBq)/mmol 0.02 mCi (0.74 MBq)/mL Packaged in toluene:methanol (1:1) in a silanized vial. Shipped in dry ice. Store at -20 °C.	10 µCi (370 kBq) 25 µCi (925 kBq)	NEC663010UC NEC663025UC
Sphingosine-1-Phosphate, [³³ P]- 3000 Ci (111 TBq)/mmol Packaged in 85% methanol, 15% Water, 0.1% Tetrabutylammonium hydroxide solution Shipped Dry Ice.	100µCi (3.7MBq) 250µCi (9.25MBq) 500µCi (18.5MBq)	NEG381H100UC NEG381H250UC NEG381H500UC
Sphingosine, D-erythro-[³ H]- 15–30 Ci (0.555–1.11 TBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in ethanol under argon in a silanized vial. Shipped in dry ice. Store at -20 °C. Fresh Upon Request.	50 µCi (1.85 MBq)	NET1072050UC
Spiperone, [benzene ring- ³ H]-, (Spiroperidol) 15–30 Ci (0.555–1.11 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol under argon in a vial that protects contents from UV light. Shipped in dry ice. Store at -80 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq) 1 mCi (37 MBq)	NET565025UC NET565250UC NET565001MC
SQ 29548, [5,6- ³ H]- 30–60 Ci (1.11–2.22 TBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in an ethanol:0.01 M phosphate buffer (pH 6.8) (1:1) under argon in a silanized vial. Shipped in dry ice. Store at -20 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq)	NET936025UC NET936250UC
SR 141716A, [³ H]- 35-60 Ci (1.30-2.22 TBq)/mmol 0.2 mCi (7.4 MBq)/ml Packaged in ethanol. Shipped in dry ice. Store at -20°C.	250 µCi (9.25 MBq)	NET1158250UC
SR 142801, [³ H]- 50–80 Ci (1.85–2.96 TBq)/mmol 0.2 mCi (7.4 MBq)/mL Packaged in ethanol Shipped in dry ice. Store at –20°C.	250 µCi (9.25 MBq)	NET1183250UC
SR 48968, [benzamide-4- ³ H]- 20–30 Ci (0.74–1.11 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol. Shipped in dry ice. Store at -20 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq)	NET1077025UC NET1077250UC
SR 95531, [butyryl-2,3- ³ H]- 30–60 Ci (1.11–2.22 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol under argon in a silanized vial. Shipped in dry ice. Store at -20 °C.	25 µCi (925 kBq) 250 µCi (9.25 MBq)	NET946025UC NET946250UC
SRS-A Precursor See Leukotriene.		

St-Su

Product	Size	Product No.
Starch, [¹⁴ C(U)]-, (Nicotiana tobacum L.) 1.5–2 mCi (55.5–74 MBq)/mg 0.1 mCi (3.7 MBq)/mL Packaged in water:ethanol (97:3). Shipped ambient. Store at 2–8 °C.	50 µCi (1.85 MBq)	NEC730050UC
Stearic acid, [¹⁴ C]- 50–62 mCi (1850–2294 MBq)/mmol 0.2 mCi (7.4 MBq)/mL Packaged in toluene under nitrogen. Shipped ambient. Store at –20°C.	250 µCi (9.25 MBq)	NEC096H250UC
Streptavidin, [¹²⁵ I]- 1800-4500 Ci/mmol (66-170 TBq/mmol) Supplied in acetate buffered saline at pH 5 containing 0.1% gelatin. Packaged in TPX plastic. Shipped in dry ice. Store at –20°C. Fresh lot: Second Monday of each month.	50 µCi (1.85 MBq) 100 µCi (3.70 MBq)	NEX238050UC NEX238100UC
Stromal Cell-derived Factor See SDF-1α.		
Strontium-85 radionuclide >3 Ci (111 GBq)/g Packaged in 0.5 M HCl. Shipped ambient. Store ambient. Half life: 64.84 days	500 µCi (18.5 MBq) 1 mCi (37 MBq) 2 mCi (74 MBq) 5 mCi (185 MBq) 10 mCi (370 MBq)	NEZ082500UC NEZ082001MC NEZ082002MC NEZ082005MC NEZ082010MC
Strychnine, [benzene-ring- ³ H]- 15–40 Ci (0.555–1.48 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol under nitrogen in vial that protects contents from UV light. Shipped in dry ice. Store at -20 °C.	250 µCi (9.25 MBq)	NET773250UC
Substance K See Neurokinin A.		
Substance P (Lys ³), [¹²⁵ I]-, Bolton-Hunter labeled 2200 Ci (81.4 TBq)/mmol Packaged in TEAP (pH 3.5):acetonitrile (73:27) containing 2-mercaptoethanol. Shipped in dry ice. Store at -20 °C. Fresh lot: Fourth Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX190010UC NEX190050UC
Substance P (Tyr ⁸), [¹²⁵ I]- 2200 Ci (81.4 TBq)/mmol Packaged in 1-propanol:tris-HCl buffer (pH 8.5) containing sodium chloride, BSA and Trasylol®. Shipped ambient. Store at 2–8 °C. Fresh lot: Third Monday of each month.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEX152010UC NEX152050UC
Substance P (9-Sar, 11-Met(O ²)), [2-prolyl-3,4- ³ H]- 25–55 Ci (0.925–2.03 TBq)/mmol 1 mCi (37 MBq)/mL Packaged in ethanol in a silanized vial. Shipped in dry ice. Store at -20 °C.	50 µCi (1.85 MBq) 250 µCi (9.25 MBq)	NET1025050UC NET1025250UC
Substance P, [leucyl-3,4,5- ³ H(N)]- >120 Ci (4.44 TBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in 0.1 N acetic acid:ethanol with 1% 2-mercaptoethanol and a stabilizer under argon in a silanized vial. Shipped in dry ice. Store at -20 °C.	250 µCi (9.25 MBq)	NET1115250UC

Su-Ta

Product	Size	Product No.
Sucrose, [¹⁴ C(U)]-	50 µCi (1.85 MBq)	NEC100X050UC
400–700 mCi (14.8–25.9 GBq)/mmol	250 µCi (9.25 MBq)	NEC100X250UC
0.1 mCi (3.7 MBq)/mL	1 mCi (37 MBq)	NEC100X001MC
Packaged in ethanol:water (9:1). Shipped ambient. Store at 2–8 °C.		
Sulfur-35 radionuclide	1 mCi (37 MBq)	NEX041001MC
250–1000 mCi (9.25–37 GBq)/mmol	2 mCi (74 MBq)	NEX041002MC
Packaged as sodium sulfate in 1 mL water.	5 mCi (185 MBq)	NEX041005MC
Shipped ambient. Store ambient.	10 mCi (370 MBq)	NEX041010MC
Half life: 87.4 days	25 mCi (925 MBq)	NEX041025MC
Fresh lot: Every 4 weeks.		
Sulfur-35 radionuclide	1 mCi (37 MBq)	NEX041H001MC
1050–1600 Ci (38.8–59.2 TBq)/mmol	2 mCi (74 MBq)	NEX041H002MC
Packaged as sodium sulfate in 1 mL water.	5 mCi (185 MBq)	NEX041H005MC
Shipped ambient. Store ambient.	10 mCi (370 MBq)	NEX041H010MC
Half life: 87.4 days	25 mCi (925 MBq)	NEX041H025MC
Fresh lot: Every 4 weeks.		
Sulfur-35 radionuclide	1 mCi (37 MBq)	NEX042001MC
1050–1600 Ci (38.8–59.2 TBq)/mmol	2 mCi (74 MBq)	NEX042002MC
Packaged as sulfuric acid in 1 mL water.	5 mCi (185 MBq)	NEX042005MC
Shipped ambient. Store ambient.	10 mCi (370 MBq)	NEX042010MC
Half life: 87.4 days	25 mCi (925 MBq)	NEX042025MC
Fresh lot: Every 4 weeks.		
(-)-Sulpiride, [methoxy- ³ H]-	250 µCi (9.25 MBq)	NET775250UC
60–87 Ci (2.22–3.22 TBq)/mmol		
1 mCi (37 MBq)/mL		
Packaged in ethanol under nitrogen in a vial that protects contents from UV light. Shipped in dry ice. Store at -20 °C.		
T ₃		
See Triiodothyronine, L-3,5',3'.		
T ₄		
See Thyroxine.		
TARC, [¹²⁵ I]-, (human, recombinant)	10 µCi (370 kBq)	NEX369010UC
2200 Ci (81.4 TBq)/mmol	25 µCi (925 kBq)	NEX369025UC
Packaged in sodium acetate buffer (pH 4.2) containing sucrose and BSA. Shipped in dry ice. Store at -20 °C. Fresh lot: First Monday of each month.		
Taurine, [1,2- ³ H(N)]-	250 µCi (9.25 MBq)	NET1173250UC
5–30 Ci (0.185–1.11 TBq)/mmol	1 mCi (37 MBq)	NET1173001MC
1.0 mCi (37 MBq)/mL		
Steri-packaged in ethanol:water (2:98). Shipped in blue ice.		
Taurocholic acid, [³ H(G)]-	250 µCi (9.25 MBq)	NET322250UC
1–5 Ci (37–185 GBq)/mmol	1 mCi (37 MBq)	NET322001MC
1 mCi (37 MBq)/mL		
Packaged in methanol:ethanol (1:3). Shipped ambient. Store at 2–8 °C.

Triiodothyronine, L-3,3',5'-[¹²⁵ I]-, ([¹²⁵ I]-Reverse T ₃) 750–1250 µCi (27.8–46.3 MBq)/µg Packaged in 1-propanol:water (1:1) in a vial that protects contents from UV light. Shipped ambient. Store at 2–8 °C. Fresh lot: Fourth Monday of each month.	250 µCi (9.25 MBq) 500 µCi (18.5 MBq)	NEX109250UC NEX109500UC
Triiodothyronine, L-3,5,3'-[¹²⁵ I]-, ([¹²⁵ I]-T ₃) 135–165 µCi (5–6.11 MBq)/µg Packaged in 1-propanol:water (1:1) in a vial that protects contents from UV light. Shipped ambient. Store at 2–8 °C. Fresh lot: Third Monday of each month.	100 µCi (3.7 MBq) 250 µCi (9.25 MBq) 500 µCi (18.5 MBq)	NEX110100UC NEX110250UC NEX110500UC
Triiodothyronine, L-3,5,3'-[¹²⁵ I]-, ([¹²⁵ I]-T ₃) 1080–1320 µCi (40–48.8 MBq)/µg Packaged in 1-propanol:water (1:1) in a vial that protects contents from UV light. Shipped ambient. Store at 2–8 °C. Fresh lot: Third Monday of each month.	100 µCi (3.7 MBq) 250 µCi (9.25 MBq) 500 µCi (18.5 MBq)	NEX110H100UC NEX110H250UC NEX110H500UC
Triiodothyronine, L-3,5,3'-[¹²⁵ I]-, ([¹²⁵ I]-T ₃) 3300 µCi (122 MBq)/µg Packaged in 1-propanol:water (1:1) in a vial that protects contents from UV light. Shipped ambient. Store at 2–8 °C. Fresh lot: Third Monday of each month.	100 µCi (3.7 MBq) 250 µCi (9.25 MBq) 500 µCi (18.5 MBq)	NEX110X100UC NEX110X250UC NEX110X500UC
Triolein, [carboxyl- ¹⁴ C]- 80–120 mCi (2.96–4.44 GBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in toluene:ethanol (1:1) under nitrogen in a silanized vial. Shipped in dry ice. Store at -20 °C.	50 µCi (1.85 MBq) 250 µCi (9.25 MBq)	NEC674050UC NEC674250UC
Triolein, [carboxyl- ¹⁴ C]- 50–80 mCi (1.85–2.96 GBq)/mmol 0.1 mCi (3.7 MBq)/mL Packaged in toluene in a glass ampoule, under nitrogen. Shipped in dry ice. Store at -20°C.	50 µCi (1.85 MBq) 250 µCi (9.25 MBq)	NEC674L050UC NEC674L250UC
Triolein, [9,10- ³ H(N)]- 30–120 Ci (1.11–4.44 TBq)/mmol 0.5 mCi (18.5 MBq)/mL Packaged in toluene:ethanol (1:1) under nitrogen in a silanized vial. Shipped in dry ice. Store at -20 °C.	1 mCi (37 MBq) 5 mCi (185 MBq)	NET431001MC NET431005MC
Triolein, [9,10- ³ H(N)]- 10–30 Ci (0.37–1.11 TBq)/mmol 5.0 mCi (185 MBq)/mL Packaged in toluene Shipped in dry ice. Store at -20°C.	5 mCi (185 MBq)	NET431L005MC
Tryptophan, L-[side chain- ¹⁴ C]- 40–60 mCi (1.48–2.22 GBq)/mmol 0.02 mCi (0.74 MBq)/mL Steri-packaged in ethanol:water (2:98). Not for human use. Shipped on blue ice. Store at 2–8 °C.	10 µCi (370 kBq) 50 µCi (1.85 MBq)	NEC367010UC NEC367050UC
Tumor Necrosis Factor-α, [¹²⁵ I]-, ([¹²⁵ I]-rTNFα), (human, recombinant) >30 µCi (1.11 MBq)/µg Packaged in a tris-HCl buffer (pH 7.5) containing BSA and a stabilizer in a Sigma Cote™ treated vial. Shipped in dry ice. Store at -80 °C. Fresh lot: Fourth Monday of each month.	5 µCi (185 kBq) 10 µCi (370 kBq) 25 µCi (925 kBq)	NEX257005UC NEX257010UC NEX257025UC

Better microplates mean better results!

Radiometric Detection

High quality microplates manufactured by the instrument and assay expert will give you better results, time after time. You'll find the type, size and color you need for any assay application, detection technology and any plate reader. Don't waste time with general labware plates, choose plates developed and tested with your application in mind. Never forget – better plates, give better performance and better results.

Application	Assay Type	Recommended Microplates
Flitration Assays	Receptor Binding, Cell Harvesting, ³ H Thymiding, DNA Binding/Hybrid	UniFilter [®] , OmniFilter [™] Plate
Isotopic Assays	Solid-Phase Radiobinding SPA (Scintillation Proximity Assay) Solid Scintillation (HPLC fraction, ⁵¹ Cr Release) Liquid Scintillation Counting	FlashPlate [®] , Scintiplate [®] OptiPlate [™] , ProxiPlate [™] , IsoPlate, VisiPlate [™] LumaPlate [™] OptiPlate [™] , IsoPlate, VisiPlate [™] , Flexible Plate, PicoPlate [™] , PloyPlate [™]
Cell-based Assays	Real-time analysis of cell adhesion, Cell Signaling, Cell Motility, Cell Proliferation, Cellular Metabolism, Drug Metabolism (intake and efflux).	CytoStar - T [®] Scintillating Microplate

Looking for microplate detail visit www.perkinelmer.com/Microplates.

Sterile, tissue culture treated scintillating microplates for real-time, non-invasive call based assays using the SPA platform technology in Microbeta² or Top Count.

Scope of Radiosynthes labeling Services

Over fifty years of experience in labeling technologies allows us to label virtually any biomolecule. Our expertise in assay development and custom synthesis help streamline your projects and save valuable time. Rely on PerkinElmer to have what you need, when you need it.

Trust PerkinElmer for Radiochemical Competence and Safety

No other company has invested more time and resources into safe radiochemical development and technology transfer than PerkinElmer. We manufacture products under an ISO 9001:2008 registered quality system. PerkinElmer can also perform custom radiosynthesis under GMP guidelines. *Consistent with ICH Q7, Good Manufacturing Practice Guidance for Active Pharmaceutical Ingredient, August, 2001, Section 19, API's for Use in Clinical Trials.

Radiosynthesis & Radiolabeling Services

¹⁴C, ³H and ³⁵S Custom Synthesis Services

Radiosynthesis & Radiolabeling Services

PerkinElmer's experienced chemists will work with you, scientist to scientist, to design and prepare your radiochemical. You'll have access to PerkinElmer's extensive technical support resources, both during the specification process and after delivery, to ensure your custom product meets your exact specifications and application needs. We offer industry-leading turnaround times on quotations and deliveries worldwide—and highly competitive pricing.

- **Confidentiality guaranteed:** we respect the proprietary nature of your work and of the materials you entrust to us, and so we conduct business to ensure utmost confidentiality. When it is necessary for you to disclose confidential information to us, we will promptly and efficiently process a nondisclosure agreement.
- **Fast quotation and delivery:** our international network of sales and technical specialists is organized to respond to your inquiries quickly, professionally, and definitively.
- **ISO certified:** we develop and manufacture custom products under an ISO 9001:2008 quality system, ensuring reliable traceability.
- **GMP compliant:** we provide dedicated custom radiochemical synthesis in our GMP laboratory suite in compliance with FDA GMP guidelines. Your synthesis is conducted by GMP trained chemists. You will receive a Certificate of Analysis with your product documenting the methods of analysis and the results versus your specifications, certified by our Custom Synthesis, Regulatory Affairs and Quality Assurance Managers.
- **GMP capabilities:** we have extensive experience with GMP manufacturing and we support Drug Master Files. We can manufacture your custom product under conditions consistent with 21 CFR 210.211, which is suitable for materials to be provided for clinical trial and development studies. Please specify GMP conditions when you request your quotation.

¹⁴C, ³H and ³⁵S Custom Synthesis Services

Our custom synthesis scientists are experts in dealing with the technically challenging synthesis of radiolabeled biochemicals, such as peptides, steroids, lipids and others. They routinely collaborate with chemists from our Analytical Laboratory to ensure the successful purification and analysis of final products.

Exactng Purity Standards

- Every custom synthesis product is analyzed to ensure that it meets the purity requirements agreed to upon acceptance of the quotation.
- When your custom radiochemical is delivered, it is accompanied by a report detailing the analytical methods used and the results obtained.
- Purity is determined by analytical methods that may include HPLC, MS, NMR, GC, LC, UV spectrometry, and agarose and polyacrylamide gel electrophoresis.
- For novel custom radiochemicals, our Analytical Laboratory works with you and with our team of synthetic chemists to develop appropriate new analytical methods.

Chiral Synthesis and Chiral Separation

We are experienced in synthesizing chiral compounds and performing chiral separations. We welcome your participation in selecting the most appropriate chiral methodology. Available methodologies include:

- **Chiral compound synthesis:** biosynthesis, enzymatic resolution, chiral auxiliaries, chiral catalysts.
- **Chiral HPLC:** separation of the target enantiomer from a racemic mixture.

Radiosynthesis & Radiolabeling Services

Tritium Labeling Service/Radioiodination Services

Tritium ^3H Labeling Service

Our Tritium Labeling Service is a cost-effective way to prepare a ^3H -labeled radiochemical. The process includes:

- Reaction of the precursor you submit, according to the labeling method you select.
- Removal of the catalyst and labile tritium from the resulting crude product.
- Assay of the resulting crude product for total radioactivity.

Any additional procedures are executed upon written agreement prior to performance of the service.

When you discuss the requirements of your particular application with PerkinElmer scientists, they will discuss the available tritium labeling methods with you, recommend the best approach and describe the benefits and limitations of each method.*

*Please note: All tritiation methods expose the material to a radioactive field that causes decomposition of all materials present in the mixture. The nature and amount of decomposition depends on various factors, including the nature and amount of starting material, the amount of tritium employed, and the length of exposure to radiation. Other factors affecting decomposition are still undefined. Due to the great variety of materials handled, PerkinElmer cannot give a generalized statement about the nature or quantity of impurities to be expected.

^{125}I and ^{131}I Radioiodination Services

PerkinElmer will label your compound with ^{125}I or ^{131}I using the most appropriate radioiodination method and reagent quantities to meet your specifications. We can perform large scale iodinations (>10 mCi).

- Unbound iodide is removed from the labeled product(s) using HPLC or open column chromatography, depending on the characteristics of the molecule being iodinated.
- Typically, the product is assayed by TLC to verify that the free iodide content is <5%.
- To place an order:
 - Please submit chemically pure compounds for labeling, as any impurities present may also become labeled.
 - Upon placing your order, you will receive specific instructions for packaging, labeling, and shipping your compound to PerkinElmer.
 - To expedite delivery, we encourage you to furnish appropriate labeling references.

Radiosynthesis & Radiolabeling Services

Radioiodination Services/Nucleotide & Oligonucleotide Synthesis

Radioiodination Services

Iodination Method	Description	¹²⁵ I Product No.	¹³¹ I Product No.
Bolton-Hunter reagent	Bolton-Hunter reagent is the N-hydroxysuccinimide ester of iodinated p-hydroxyphenylpropionic acid. The active ester acylates terminal amino groups with the iodinated p-hydroxyphenylpropionic residue, effectively introducing radioactive iodine into proteins and peptides. A non-oxidative technique, it is less harsh to proteins than alternative methods.	NEX088	NEX088A
Chloramine-T	Chloramine-T (p-toluene sulfonochloramide) is an effective method of labeling a variety of proteins and peptides. This oxidative method involves exposure of the substrate to Chloramine-T in the presence of NaI, [¹²⁵ I]- or [¹³¹ I]-, for a short time and produces high specific activity proteins or peptides labeled with carrier-free radioiodine, but can be harsh.	NEX084	NEX084A
IDO-GEN® reagent	A solid phase oxidative method similar to the Chloramine-T method. It is generally considered to be milder, because the reaction takes place on the surface of the oxidant, minimizing exposure to the substrate.	NEX244	NEX244A
Lactoperoxidase	Lactoperoxidase catalyzes the oxidation of iodide using hydrogen peroxide as the enzyme substrate. It is a milder oxidative technique than Chloramine-T.	NEX083	NEX083A
Exchange labeling with sodium iodide	Conducted using standard published processes.	NEX086	NEX086A
Custom labeling methods	Propose a specific method to PerkinElmer for review, and if feasible, we will use it to perform your radioiodination.	NEX999	NEX999

³²P, ³³P and ³⁵S Nucleotide & Oligonucleotide Synthesis

PerkinElmer will synthesize and package radiolabeled mono-, di- and triphosphate nucleotides, oligonucleotides and other related biochemicals to your specifications on a make-to-order basis. We have extensive experience in labeling nucleotides in different positions (e.g., beta position) and synthesizing labeled oligos for hybridization.

Radiosynthesis & Radiolabeling Services

14C-Labeled Precursor Materials

To assist in your in-house synthesis of labeled compounds, PerkinElmer offers a number of 14C-labeled precursors that can be purchased in large quantities.

- These precursors are routinely produced and are readily available with the same high purity specifications as comparable catalog compounds.
- We will provide custom packaging in special glassware to meet your unique protocol requirements. For many applications, such packaging is more convenient and saves material. Additional charges may apply.
- The table below contains a partial list of available precursors. Other precursors are available. Please inquire.

14C PRECURSOR MATERIALS

Precursor	Specific Activity [mCi/mmol]	Form and Packaging	Product No.
Acetanilide [14C]	40-100	Solid in screw capped vial	NEC822
Acetic acid, sodium salt, [1-14C]-	45-60	Ethanol	NEC084H
Acetic acid, sodium salt, [2-14C]-	45-60	Ethanol	NEC085H
Aniline hydrochloride, [14C(U)]-	50-100	Ethanol in silanized vial	NEL825
Barium carbonate, [14C]-	40-60	Crystalline solid	NEC009B
Benzene, [14C]-	40-60	Liquid in breakseal tube	NEC010H
Bromoacetic acid, [1-14C]-	40-60	Crystalline solid	PCM059
Bromoacetic acid, [2-14C]-	10-50	Crystalline solid	PCM011
Bromobenzene, [14C(U)]-	Up to 60	Liquid in sealed ampoule	PCM186
Chloroacetic acid, [1-14C]-	10-50	Crystalline solid	PCM087
Chloroacetic acid, [2-14C]-	10-50	Crystalline solid	PCM187
Chlorobenzene, [14C(U)]-	10-60	Liquid in sealed ampoule	PCM116
Ethyl acetate, [1-14C]-	10-55	Liquid in breakseal tube	PCM058
Ethyl acetate, [2-14C]-	10-55	Liquid in breakseal tube	PCM082
Formaldehyde, [14C]-	40-60	Formaldehyde:Water (1:99) in sealed ampoule	NEC039H
Formic acid, sodium salt, [14C]-	40-60	Ethanol:Water (7:3)	NEC089H
Methanol, [14C]-	40-60	Liquid in breakseal tube	NEC059H
Methyl iodide, [14C]-	40-60	Liquid in breakseal tube	NEC068H
Nitrobenzene, [14C(U)]-	40-60	Liquid in sealed ampoule	PCM122
Paraformaldehyde [14C]	30-50	Solid in screw capped vial	NEC821
Phenol, [14C(U)]-	50-100	Ether in sealed ampoule	NEC824
Potassium cyanide, [14C]-	40-60	Crystalline solid	NEC079H
Sodium cyanide, [14C]-	40-60	Crystalline solid	NEC477B
Thiourea, [14C]-	40-60	Crystalline solid	NEC102H
Toluene, [ring-14C]-	50-100	Liquid in breakseal tube	NEC823
Urea, [14C]-	40-60	Ethanol	NEC108H

Analytical Services/Stable Isotope Labeling

Analytical Services

The full range of analytical methods that PerkinElmer uses in the production and control of custom synthesized and labeled products are also available to customers on a contract basis. Our Analytical Services Department can perform the following analyses on your compounds:

- High Pressure Liquid Chromatography
- Thin Layer/Paper Chromatography
- NMR
- Gas Liquid Chromatography
- Mass Spectrometry
- Molecular Weight Distribution
- High Pressure Size Exclusion Chromatography
- Photodiode Array

Stable Isotope Labeling

We offer custom labeling with the stable isotopes ^2H , ^{13}C , ^{15}N and others. A wide range of compounds can be labeled with stable isotopes including NMR solvents, specialty gases, amino acids, cell growth media, nucleic acids and nucleosides, drugs and metabolites, fatty acids and lipids, and sugars. These can be used as internal or chromatographic standards and, increasingly, as labeled compounds in metabolic studies.

PerkinElmer Spa Reagents and Technologies

SPA reagents and CytoStar-T™ microplates let you see what you can't see with any other technology, so your research becomes more productive. SPA from PerkinElmer. The advantages become even clearer at www.perkinelmer.com/spa.

CytoStar-T Scintillating Microplates: radiometric detection in whole cells in real time

Microplate	Pack Size	Product Code
CytoStar-T - 96 well	5 pack	RPNQ0162

Radiation Safety Equipment

Safety First

PerkinElmer is proud to offer you better controls to incorporate within your lab environment. We offer a variety of radiation safety equipment including shields, safety trays and tray liners, midi-boxes, waste bags and bins, available from PerkinElmer.

Additional information is available at www.perkinelmer.com/radsafetyequipment.

RADIATION SHIELDS FOR BETA AND GAMMA RADIATION

Beta and gamma radiation shields provide clear non-distorted vision, have comfortable angles for working on the bench top, and are easy to clean. We offer both sitting and standing versions. All shields are 27 x 20 x 15 cm.

Radiation Safety Shield, Gamma (45° Angle)

Catalog # RPP-GS15LC

Large fixed 45° angle shield, with a curved base, for use with gamma radioisotopes. The fixed 45° angle shields provide clear, non-distorted vision, reducing light images and shadows, especially when the user is in a standing position.

Radiation Safety Shield, Beta (45° Angle)

Catalog # RPP-S45L

Large fixed 45° angle shield, with a flat base, for use with beta radioisotopes. The fixed 45° angle provides clear, non-distorted vision, reducing light images and shadows, especially when the user is in a standing position

Radiation Safety Shield, Beta (15° Angle)

Catalog # RPP-S15LC

Large fixed 15° angle shield, with a curved base, for use with beta radioisotopes. The shield provides clear, non-distorted vision, reducing light images and shadows, especially when the user is in a seated position.

STORAGE BOXES FOR BETA AND GAMMA RADIATION

Medium and large capacity storage boxes with hinged lids.

Radiation Storage Box, Gamma (Large)

Catalog # RPP-GB14

Large Storage Box, with hinged lid, for gamma radiation protection. Dimensions 19 x 19 x 19 cm.

Radiation Storage Box, Gamma (Medium)

Catalog # RPP-GB6

Medium Storage Box, with hinged lid, for gamma radiation protection. Dimensions 11 x 11 x 11 cm.

Radiation Storage Box, Beta (Medium)

Catalog # RPP-B6

Medium Storage Box, with hinged lid, for beta radiation protection. Dimensions 11 x 11 x 11 cm.

SAFETY TRAYS AND LINERS

Reusable trays and liners, made of non-porous material, reducing cost and waste volume. They are easy to clean and have stabilized edges to prevent movement.

Safety Tray (Extra Large)

Catalog # RPP-TY11354

The rigid PVC base features specially designed stabilizing edges and rounded corners for easy cleaning.

External dimensions, 113 x 54 cm. Internal dimensions, 100 x 42 cm.

Safety Tray (Large)

Catalog # RPP-TY6854

The rigid PVC base features specially designed stabilizing edges and rounded corners for easy cleaning.

External dimensions, 68 x 54 cm. Internal dimensions, 56.5 x 42.5 cm.

Safety Tray Liners (Extra Large) package of 25

Catalog # RPP-TL11354

Unlike disposable paper bench protectors, the tray liners are reusable. Additionally, the liner's non-porous surface allows valuable samples to be retrieved, something which is clearly not possible with absorbent paper protectors. For use with the Safety Tray (Extra Large), Catalog # RPP-TY11354. External dimension, 113 x 54 cm. Internal dimension, 100 x 42 cm. Package of 25.

Safety Tray Liners (Large) package of 25

Catalog # RPP-TL6854

Unlike disposable paper bench protectors, the tray liners are reusable. Additionally, the liner's non-porous surface allows valuable samples to be retrieved, something which is clearly not possible with absorbent paper protectors. For use with the Safety Tray (Large), Catalog # RPP-TY6854.

External dimensions, 68 x 54 cm. Internal dimensions, 56.5 x 42.5 cm. Package of 25.

WASTE BINS AND BAGS

Large capacity waste bin and heavy-duty double sealed waste bags.

Radiation Waste Bin, Beta

Catalog # RPP-B12

Covered Radiation Waste Bin for beta radiation. For use with Radiation Waste Bags, Catalog # RPP-BAG17.

Dimensions, 9 x 9 x 9 cm. Capacity, 1 L.

Radiation Waste Bags (package of 25)

Catalog # RPP-BAG17

Heavy-duty, double heat-sealed, 500 gauge, polyethylene, with double string neck pull, with radiation label. For use with Radiation Waste Bin, Beta, Catalog #RPP-B12. Dimensions, 12 x 12 x 12 cm. Package of 25.

Radiometric Detection Instrumentation

PerkinElmer is the world leader in radiometric detection instrumentation with a reputation for high performance and reliability. Our range of superior liquid scintillation analyzers and gamma counters is designed around your research needs, so you get the level of performance you need for the applications your laboratory performs.

Tri-Carb Liquid Scintillation Analyzers

PerkinElmer's range of computer-controlled, vial-based benchtop liquid scintillation analyzers (LSA) are the most frequently cited LSA's in the scientific literature. Tri-Carb® analyzers are the most versatile and sensitive instruments available for detecting small amounts of alpha, beta and gamma radioactivity.

Applications: Research and environmental applications including radon in water, nuclear power station monitoring, biofuel analysis, radiocarbon dating, radiolabeling studies, biochemical pathway analysis, swipe/wipe assays, ^{51}Cr release assays, radioimmunoassay (RIA), ^3H thymidine uptake assays, enzyme purification studies and ligand receptor binding assays.

Top Features:

- High dynamic range quench monitoring.
- Intelligent sample changer and safe gravity feed sample loading.'
- TR-LSC capability for time-resolved counting.
- Sample activity data screening.

QUANTULUS Liquid Scintillation Spectrometer

An ultra-low level spectrophotometer and dedicated environmental counter that delivers proven unsurpassed performance measuring extremely low levels of man-made, cosmogenic and other natural radionuclides. Quantulus® provides the lowest possible ^3H backgrounds and the highest beta and/or alpha liquid scintillation sensitivity and counting performance resulting in excellent long-term stability.

Applications: Applications range from drinking water analyses of radon, food control for ^{90}Sr , radioactive effluent measurements at nuclear power plants, emergency preparedness for nuclear power and homeland security, radiocarbon dating, biofuel and other bio-based material analyses.

Top Features:

- Hundreds of user-controlled tailored counting configurations, in addition to defaults.
- Random access sample changing.
- Data process and plot up to six spectra on screen.
- WinQ Software coordinates data storage for different users.

Radiometric Detection Instrumentation

TopCount Liquid Scintillation and Luminescence Counters

Choose TopCount®, for high efficiency, low background counting in 24-, 96- or 384-well microplates and microvials, filterplates and filtermats, opaque microplates and scintillating plates, such as FlashPlates®. Windows XP®-based operating software and built-in Hologram® relational database software automatically store the data for every sample you count, so you don't have to worry about losing data.

Applications: Liquid and dry scintillation and luminescence methods for research including cell proliferation assays, ligand-receptor binding assays, ⁵¹Cr release assays, reporter gene assays, scintillation proximity assays (SPA), radio-immunoassay (RIA), enzyme purification studies and more.

Top Features:

- Patented TR-LSC counting technology for time-resolved counting and virtually crosstalk-free counting when used with opaque plates. High sensitivity TR-LSC technology discriminates between background and true counts by analyzing the decay period of each scintillation event.
- External plate stackers load more than 15,000 samples.
- Robotic integration option for unlimited throughput.
- High sensitivity luminescence counting provides linearity to over 20 x 10⁶ CPS.
- Crosstalk correction algorithms for large volume ³²P and ¹²⁵I samples.

MicroBeta² Liquid Scintillation and Luminescence Counters

MicroBeta²™ counters are multi-detector instruments designed for liquid scintillation or luminescence detection of low and medium throughput counting applications in 24-, 96- or 384-well microplates, flexible plates, microcentrifuge tubes, filtermats, and 4 mL vials.

MicroBeta² LumiJET™ is a multi-detector (1, 2, 6 or 12 detectors) instrument designed for glow and flash luminescence detection as well as for liquid scintillation counting with dispensing capabilities for kinetic luminescence applications, two dispensers per detector for up to 384-well plates and twelve detectors (depending on model).

Applications: Liquid and dry scintillation and luminescence methods for research including cell proliferation assays, ligand-receptor binding assays, radioimmunoassay (RIA), enzyme purification studies, all flash and glow luminescent technologies such as Aequorin/Ca²⁺ measurement and dual label reporter gene assays, as well as traditional GPCR filtration assays or scintillation proximity assays.

Top Features:

- MicroBeta² LumiJET has flash and glow luminescence measurement capabilities ideal for Aequorin assay development.
- Counting modes include single and dual label CPM, single and dual label DPM, ParaLux™ count mode and luminescence counting.
- Proprietary Time-Resolved Liquid Scintillation Counting (TR-LSC) mode improves counting capabilities significantly with opaque plates and low energy isotopes.
- Supports up to 384-well plates.
- Built-in GLP compliant software.

Radiometric Detection Instrumentation

The Model 307 Sample Oxidizer

The Model 307 Oxidizer utilizes the patented “open/close” flame oxidation technology that offers a simple, automatic method of preparation for samples that are otherwise difficult to prepare for liquid scintillation counting, for both single- and dual-labeled environmental experiments, industrial and biological samples.

Applications: ^{14}C and ^3H analysis to determine radiolabel content.

Top Features:

- Overcome costly chemical sample preparation.
- Eliminates problems associated with non-soluble samples and severe quenching.
- Substantially improves effective, precise sample combustion.
- Yields 100% isotope separation in dual-label experiments.
- Allows combustion of soil samples with excellent recovery.

Cyclone Plus Storage Phosphor System

The Cyclone™ Plus Storage Phosphor System lets you perform high resolution, filmless autoradiography right on your bench top.

This affordable imager is fast and easy to use, providing unsurpassed sensitivity, digital image analysis and flexibility.

Applications: In vitro imaging of tissue sections using ^3H or ^{14}C , PET or ^{125}I . Analysis of purity for radiotherapy and PET products, including: $^{99\text{m}}\text{Tc}$, ^{18}F , ^{90}Y and ^{177}Lu . Nucleotide metabolism studies involving TLC of ^{32}P and ^{33}P . Gene and protein expression studies using ^{32}P - and ^{33}P -labeled DNA or ^{14}C - and ^{35}S -labeled protein 2-D gels.

Top Features:

- **Highly sensitive:** Linear dynamic range of five orders of magnitude.
- **Simultaneous exposures:** 10 to 100X faster than film
- **High resolution image:** laser beam width of 50 microns.

Radiometric Detection Instrumentation

Radiomatic Flow Scintillation Analyzers

Complete flow scintillation systems optimized for monitoring single or dual-labeled radioisotopic samples separated by liquid chromatography. Our Radiomatic FSAs are the most frequently cited FSAs worldwide for online monitoring of radiolabeled samples during HPLC separation, because of their superior detection sensitivity, validated performance and proven reliability.

Applications: Liquid scintillation (homogeneous) or solid scintillation (heterogeneous) applications.

Top Features:

- Uses state-of-the-art scintillation counting technology.
- Superior quantitative analysis is ensured by a multi-channel analyzer with discrete counting windows.
- Patented TR-LSC[®] technology for reducing external background interference.
- Luminescence detection and correction to eliminate chemiluminescence interference.

WIZARD² Automatic Gamma Counters

Used in clinical and academic research labs around the world delivering outstanding performance for all types of samples in all counting applications. Unique well-type detectors and sample changer system with advanced robotics, and highly-effective lead shielding, delivers high counting efficiency, constant background and minimal crosstalk. Built-in WorkOut software provides comprehensive onboard data reduction and QC.

Applications: Radioimmunoassays (RIA), chromium (⁵¹Cr) release studies, hematology testing, Schilling testing, cell labeling, multi-nuclide studies and nuclear medicine applications, such as PET research applications, and more.

Top Features:

- User-friendly software with touch-screen operation.
- Easy networking capability.
- USBports for simple data transfer.

Scintillation Cocktail Comparison

The table below provides information to help you choose the correct cocktail. This depends on the nature of the sample to be counted as well as the sample preparation procedure and instrument used. Only the right cocktail choice, paired with a correct sample preparation procedure and instrument, will result in accurate and reproducible counting results.

Visit our website www.perkinelmer.com/ToolKit to use our online Cocktail Selector.

	COCKTAIL	TYPE OF SOLVENT	FLASH-POINT °C/Tag CC.	COUNTING EFFICIENCY ¹ - %			SAMPLE LOAD CAPACITY ² - mL

1 Typical counting efficiencies determined on a PerkinElmer Tri-Carb 3100TR/LL (preset ³H region, 0-18.6 keV).

2 Typical maximum sample volume (mL) per 10 mL cocktail at 20 °C.

3 Ultima Gold with tissue solubilizers, preferably counted within 24 hours.

* = limited capacity
- = no capacity

Various Sample Preparation Techniques

Treatment	Description	Examples
1. Dissolving	Dissolve sample directly into the cocktail or use a co-solvent	Organic samples, e.g., lipids, steroids, etc. dissolved directly in LSC cocktails.
2. Emulsifying	Aqueous samples counted in "surfactant-containing" LSC cocktails (colloidal-solutions).	Various salt/buffer solutions, acids and alkaline samples in ready-for-use LSC cocktails.
3. Suspending	Suspend insoluble particles in a stable gel phase.	Soil samples in Insta-Gel Plus.
4. Extracting or Eluting	Dissolving labeled compounds from solid phase into solution.	TLC-scrappings, paper-chromatograms, polyacrylamide gel slices, cellulose nitrate filters.
5. Solubilizing	Digesting tissue material (biological) using alkaline hydrolysis (tissue solubilizer).	Cell material, feces, tissue samples digested in Soluene-350 or SOLVABLE.
6. Wet Oxidation	Digesting sample material with strong acids and peroxides.	Digestion of plant material in nitric acid or perchloric acid with hydrogen peroxide.
7. Combustion	Combusting of dry and wet samples with trapping of ¹⁴ CO ₂ and ³ H ₂ O in suitable trapping agents.	Absorption of ¹⁴ CO ₂ in Carbo-Sorb E, Soluene-350 or Hyamine™ Hydroxide; ³ H ₂ O in Monophase S.

Safer LSC Cocktails

ULTIMA Gold Family

Occupational safety in laboratories is of unquestioned importance. Traditional scintillation cocktail formulations contain flammable, toxic solvents that permeate through polyethylene and may represent a hazard to laboratory workers, create disposal problems that place strains on the environment, and often add hidden lab costs. PerkinElmer has addressed these problems by offering several lines of safer LSC cocktails.

ULTIMA Gold Family

Beginning in the early 1980's, user and environmental safety concerns led to the introduction of cocktails based on high flash point solvents. Research conducted by Packard BioSciences Corp., later acquired by PerkinElmer, led to the development of the ULTIMA Gold™ family, high performance cocktails with the following properties:

- Very high flash point: simplifies transportation and eliminates special storage requirements.
- Very low vapor pressure: nonvolatile.
- Low toxicity.
- Nonflammable.
- High counting efficiency.
- High quench resistance.
- No diffusion through PE vials.

ULTIMA Gold

ULTIMA Gold is a safer liquid scintillation cocktail for a wide range of aqueous and non-aqueous samples. This multipurpose LSC cocktail has a high counting efficiency and provides superior detection efficiency for samples that exhibit severe quench in conventional cocktails.

ULTIMA Gold

ULTIMA Gold AB

Specifically designed for alpha/beta discrimination in liquid scintillation counting, ULTIMA Gold AB provides the slow pulse decay characteristics necessary for effective alpha/beta discrimination. Its excellent sample holding capacity makes ULTIMA Gold AB ideal for a variety of both aqueous and acidic sample types.

ULTIMA Gold XR

Ultima Gold F

ULTIMA Gold F is a high efficiency cocktail for counting dry filter supports, as well as non-aqueous (organic) samples. For alpha/beta LSC counting, ULTIMA Gold F is an ideal diluent for ULTIMA Gold AB, increasing energy pulse-shape resolution for small volume samples.

ULTIMA Gold LLT

Determine low levels of ^3H in a wide range of water samples without distillation using ULTIMA Gold LLT. It accepts up to 54% tap water, river water, rain water, and even sea water, with ^3H counting efficiencies of approximately 30% and with very low background levels. When used with PerkinElmer's Tri-Carb® Liquid Scintillation Analyzers or the QUANTULUS® Ultra Low Level Liquid Scintillation Spectrometer, minimum detectable activities are less than 1.1 Bq/L (500 minute count time).

ULTIMA Gold LLT

ULTIMA Gold uLLT

ULTIMA GOLD uLLT is perfect for ultra low level LSC applications using PerkinElmer's Quantulus™. The ultra low background, high efficiency and good sample uptake is optimal for environmental monitoring applications (e.g. drinking water testing) of course, all counting conditions have to be optimized for best results.

Safer LSC Cocktails

OptiPhase HiSafe Family

ULTIMA Gold MV

Ultima Gold MV is specifically formulated for the rapid uptake of aqueous and non-aqueous samples. It is recommended for counting wet or damp glass fiber filters from cell harvesters. It is also ideal for counting small volume samples in miniature vials and microtubes because of its reduced viscosity compared to other high flash point cocktails.

ULTIMA Gold XR

ULTIMA Gold XR is a safer liquid scintillation cocktail with a very high sample load capacity. Choose it to count large sample volumes, or when using miniature vials to increase throughput, reduce cost per sample or minimize radioactive waste. ULTIMA Gold XR is compatible with alkaline samples.

Product	Product No.	Size
ULTIMA Gold	6013321	1 x 1 L
	6013326	1 x 5 L
	6013327	4 x 2.5 L
	6013329	2 x 5 L
	6013322	1 x 25 L
ULTIMA Gold AB	6013301	1 x 1 L
	6013309	2 x 5 L
	6013171	1 x 1 L
ULTIMA Gold F	6013179	2 x 5 L

ULTIMA Gold XR	6013111	1 x 1 L
	6013117	4 x 2.5 L
	6013119	2 x 5 L

Sample sizes of all products in table above are available. To order a sample, please contact your PerkinElmer Sales Representative.

OptiPhase HiSafe Family

A major technological advance in safer LSC cocktails, our OptiPhase™ HiSafe® family of safer LSC cocktails uses the solvent di-isopropylnaphthalene (DIN) to achieve improved safety without decreasing performance.

OptiPhase HiSafe 2

OptiPhase HiSafe 2 is a general-purpose liquid scintillation cocktail. It combines very high counting efficiency with moderate to high sample holding capacity for a wide range of aqueous and non-aqueous solutes.

OptiPhase HiSafe 3

OptiPhase HiSafe 3 is a liquid scintillator that handles a broad range of solutes. Used for a variety of scintillation applications, it combines good counting efficiency with a very high level of sample acceptance, particularly for high ionic strength solutes.

OptiPhase SuperMix

OptiPhase SuperMix has been specially formulated for use with microplates. It mixes easily with a wide variety of aqueous solutes and has a very high uptake capacity, minimizing cocktail use and reducing disposal problems.

Betaplate Scint

Betaplate Scint is a HiSafe cocktail for samples harvested or spotted onto dry filter membranes. High counting efficiency may eliminate sample pre-treatment often necessary with conventional cocktails. Ideal for use with samples in organic solutions.

Product	Product No.	Size
OptiPhase HiSafe 2	1200-436	1 x 5 L
OptiPhase HiSafe 3	1200-437	1 x 5 L
OptiPhase SuperMix	1200-439	1 x 5 L
Betaplate Scint	1205-440	1 x 5 L

Safer LSC Cocktails

Opti-Fluor Family/Other Safer LSC Cocktails

Opti-Fluor Family

Our Opti-Fluor® cocktails are universal, safer liquid scintillation cocktails designed for use with polyethylene vials.

Opti-Fluor

Based on the high flash point solvent LAB (linear alkyl benzene), Opti-Fluor does not show any diffusion through the walls of polyethylene vials (observed with many LSC cocktails containing toluene, xylene or pseudocumene).

Opti-Fluor O

Opti-Fluor O is used for counting organic (non-aqueous) samples. It will accommodate many organic solvents, forming clear liquid solutions yielding good counting efficiencies.

Opti-Fluor O can replace classical toluene-, xylene- or pseudocumene-based LSC cocktails for organic samples. Opti-Fluor O is ideally suited for counting radon in water when a safer cocktail is preferred.

Opti-Fluor

Product	Product No.	Size
Opti-Fluor	6013194	1 x
Opti-Fluor	6013199	2 x 5 L
Opti-Fluor O	6013331	1 x 1 L
Opti-Fluor O	6013339	2 x 5 L

Sample sizes of products in table above are available. To order a sample, please contact your PerkinElmer Sales Representative.

Other Safer LSC Cocktails

Emulsifier-Safe

Emulsifier-Safe™ is a LAB-based cocktail that is economically priced for aqueous and organic samples. Aqueous samples and many buffer solutions are accepted in a single liquid phase up to a 10 to 15% sample load.

High Efficiency Mineral Oil Scintillator

High Efficiency Mineral Oil Scintillator is the cocktail of choice for the detection of radon in water and soil samples. It yields a high counting efficiency and provides the same accuracy as solid detectors for radon. It has a low volatility and a high flash point (79° C/175 °F).

Product	Product No.	Size
Emulsifier-Safe	6013389	2 x 5 L
High Efficiency Mineral Oil Scintillator	6NE9571	1 x 1 L
	6NE9579	4 x 2.5 L

PerkinElmer also offers several safer alternative flow scintillation cocktails and tissue solubilizers.

Classical LSC Cocktails

Emulsifying Cocktails/Pico-Fluor Family

PerkinElmer offers classical liquid scintillation cocktail formulations that are optimized for the highest counting efficiency and maximum sample holding capacity. Our prepared cocktails are easy-to-use, save preparation time and minimize laboratory errors. Our carefully controlled blending and quality assurance procedures provide high performance, batch homogeneity and lot-to-lot uniformity.

Emulsifying Cocktails

Pico-Fluor Family

The Pico-Fluor™ family is a range of pseudocumene-based liquid scintillation counting cocktails.

Pico-Fluor 15

Pico-Fluor 15 is specifically formulated to provide accurate and reproducible high efficiency counting of aqueous samples. It will accept up to 2 mL of a wide variety of aqueous samples in 10 mL of cocktail. The continuous single liquid phase, formed from zero to the maximum acceptable sample load, avoids unexpected two-phase separation.

Pico-Fluor 30

Pico-Fluor 30 is a complete, ready-to-use cocktail specially formulated for counting high sample loads of aqueous solutions. It excels in the incorporation of samples such as phosphate-buffered saline with sample loads often exceeding 30%.

Pico-Fluor 40

Pico-Fluor 40 is a universal cocktail for use with both conventional 20 mL size vials and miniature vials. It has a large sample holding capacity and high quench resistance and is compatible with tissue solubilizers.

Filter-Count

Filter-Count™ is specifically formulated to dissolve cellulose nitrate membrane filters. It can also dissolve mixed cellulose esters and polyvinyl chloride (PVC) filters, although these sample types may require additional time. Filter-Count will dissolve wet or dry filters, reducing sample preparation procedures and improving counting results by enabling the use of external standard quench monitoring.

Hionic-Fluor

Hionic-Fluor™ is a cocktail for samples with high ionic strength and solubilized samples in strong alkaline media. It is recommended for counting concentrated sucrose or cesium chloride gradients. Hionic-Fluor exhibits extremely fast chemiluminescence decay with alkaline solutions or tissue solubilizers such as Soluene®-350 and SOLVABLE™.

Classical LSC Cocktails

Hionic-Fluor

Product	Product No.	Size
Filter-Count	6013141	1 x 1 L
	6013149	2 x 5 L
Hionic-Fluor	6013311	1 x 1 L
	6013319	2 x 5 L
	6013312	1 x 20 L
Pico-Fluor 15	6013051	1 x 1 L
	6013059	2 x 5 L
Pico-Fluor 30	6013041	1 x 1 L
	6013049	2 x 5 L
Pico-Fluor 40	6013341	1 x 1 L
	6013349	2 x 5 L

A sample size of Hionic-Fluor is available. To order a sample, please contact your PerkinElmer Sales Representative.

Classical LSC Cocktails

Other Classical Cocktails

Aquasol-2

Aquasol™-2 is a second generation, universal LSC cocktail that improves and extends the features of its predecessor cocktail, Aquasol. It is xylene based and is suitable for difficult-to-count samples. Aquasol-2 yields high counting efficiencies while still accepting water samples up to 50% loading.

Atomlight

Atomlight® is a pseudocumene-based LSC cocktail that is ideal for counting high salt concentration aqueous samples. It holds the maximum amount of sample in the minimum amount of cocktail and is ideal for use with miniature vials.

Biofluor

Biofluor® is a pseudocumene-based LSC cocktail ideal for counting low to intermediate volumes of aqueous samples. It is a high efficiency monophasic cocktail that will accommodate up to 2 mL of aqueous sample in 15 mL cocktail.

Insta-Fluor Plus

Insta-Fluor™ Plus is a pseudocumene-based cocktail blended for optimal counting of organic samples and non-aqueous solutions. Simply combine the organic sample with Insta-Fluor Plus, shake to ensure homogeneity and count. Insta-Fluor Plus is ideally suited for use in two-phase extraction assays (e.g., CAT assays).

Insta-Gel Plus

Insta-Gel Plus is the cocktail of choice for a large variety of applications. It excels in the incorporation of water and aqueous-soluble samples and is equally useful for organic-soluble samples. Due to the very high sample holding capacity and its typical gel formation, Insta-Gel Plus is ideal for counting large volumes of water, TLC scrapings and suspended solids.

Aquasol-2 and Insta-Gel Plus

Product	Product No.	Size
Aquasol-2	6NE9521	1 x 1 L
	6NE9529	2 x 5 L
Atomlight	6NE9689	2 x 5 L
Biofluor	6NE9611	2 x 5 L
	6NE9619	2 x 5 L
Insta-Fluor Plus	6013121	1 x 1 L
	6013127	4 x 2.5 L
Insta-Gel Plus	6013391	1 x 1 L
	6013399	2 x 5 L

Classical LSC Cocktails

Sample Oxidizer Reagents

Carbo-Sorb E

Carbo-Sorb® E is a high capacity radioactive carbon dioxide absorber compatible with the counting cocktail Permafluor® E+.

Sample Oxidizer Cocktails

These pseudocumene-based oxidizer cocktails are designed for use with PerkinElmer's Sample Oxidizer to ensure superior performance and consistently reliable results.

Monophase S

Monophase® S is specifically formulated for counting pure water samples. It will accept up to 23% water, forming a clear fluid that yields outstanding counting efficiencies. It does not foam and does not form a gel, even at extreme mixing ratios (washing cycle). It is the cocktail of choice for obtaining the highest ³H counting performance from a Sample Oxidizer.

Permafluor E+

Permafluor® E+ is uniquely designed for counting ¹⁴CO₂ samples that are trapped in Carbo-Sorb E.

Carbo-Sorb E

Permafluor E+

Product	Product No.	Size

PerkinElmer Sample Oxidizer

Flow Detection Cocktails

ULTIMA-Flo Safer Flow Detection/Flo-Scint Classical Flow Detection

Flow Detection Cocktails

Our flow detection cocktails are specially designed for use with PerkinElmer's Flow Scintillation Analyzer.

ULTIMA-Flo Safer Flow Detection Cocktail Family

The ULTIMA-Flo™ family includes three, biodegradable cocktails for use in flow scintillation analyzers. The high loading capacity of the ULTIMA-Flo cocktails means less cocktail required, longer residence times and higher sensitivity.

ULTIMA-Flo AF

ULTIMA-Flo AF is formulated to accept gradients up to 2.0 M ammonium formate at a 1:1 ratio with fast and easy mixing. It is the cocktail of choice when using ammonium formate buffers to elute radiolabeled inositol phosphates from HPLC columns.

ULTIMA-Flo AP

ULTIMA-Flo AP accepts gradients up to 2.0 M ammonium phosphate with fast and easy mixing. It demonstrates high counting efficiency and quench resistance for a wide variety of sample types.

ULTIMA-Flo M

ULTIMA-Flo M is formulated for multipurpose flow counting applications. This safer cocktail has a high sample acceptance for a wide range of dilute HPLC eluents, and methanol and acetonitrile gradients. ULTIMA-Flo M has low viscosity, unique rapid mixing properties and is resistant to chemiluminescence.

Product	Product No.	Size
ULTIMA-Flo AF	6013589	2 x 5 L
ULTIMA-Flo AP	6013591	1 x 1 L
	6013592	1 x 20 L
	6013599	2 x 5 L
	6013571	1 x 1 L
ULTIMA-Flo M	6013572	1 x 20 L
	6013576	1 x 5 L
	6013579	2 x 5 L

Sample sizes of ULTIMA-Flo AP and ULTIMA-Flo M are available. To order a sample, please contact your PerkinElmer Sales Representative.

The ULTIMA-Flo series can replace the complete family of Flo-Scint and similar cocktails. ULTIMA-Flo cocktails outperform the classical cocktails on mixing ratio (up to 1:1). They also provide the user with the safety features related to the high flash point solvent system.

Flo-Scint Classical Flow Detection Cocktail Family

The classical Flo-Scint™ cocktails are pseudocumene-based flow cocktails that have gained an excellent reputation when gradients, especially those with methanol and acetonitrile, need to be counted. They are resistant to chemiluminescence and are non-gelling.

Flo-Scint II

Flo-Scint II can be used with polar solvents and dilute buffers affording good sample loading capacity and low viscosity.

Flo-Scint III

Flo-Scint III is designed to work with methanol and aceto-nitrile gradients as well as moderately buffered solutions, including phosphates. It has good sample loading capacity, low viscosity and high counting efficiency.

Flo-Scint A

Flo-Scint A is suitable for acetonitrile/water gradients, for counting polar organic solvents and dilute salt solutions. It has excellent sample loading capacities at up to 50% in aqueous solutions. Flo-Scint A is also resistant to chemiluminescence, is non-gelling and has a high counting efficiency.

Product	Product No.	Size
Flo-Scint II	6013529	2 x 5 L
Flo-Scint III	6013539	2 x 5 L
Flo-Scint A	6013569	2 x 5 L

Cocktails & Scintillators for Microplates

MicroScint LSC Cocktails

MicroScint LSC Cocktails

Specifically formulated for use with PerkinElmer's TopCount Microplate Scintillation and Luminescence Counter, MicroScint™ cocktails mix easily with samples for rapid uptake of aqueous and non-aqueous samples in microplates. These cocktails provide you with a choice of optimal characteristics, including excellent counting efficiency, high sample capacity, quench resistance and polystyrene compatibility.

MicroScint-20

MicroScint-20 cocktail accepts dilute aqueous samples at up to 20% loading (up to 25 µL in 100 µL MicroScint-20). With these sample types, MicroScint-20 cocktail mixes easily and completely upon agitation with an orbital shaker. It is the cocktail of choice for counting filters that have not been completely dried.

MicroScint-20 has an absolute, unquenched tritium efficiency of approximately 52% when measured in a 24-well white polystyrene OptiPlate™ microplate.

MicroScint-40

MicroScint-40 cocktail accepts dilute aqueous samples at up to at least 40% loading (up to 70 µL in 100 µL MicroScint-40). It also mixes easily with most sample types but slightly longer agitation may be necessary when handling large sample volumes.

MicroScint-40 has an absolute, unquenched tritium efficiency of approximately 40% when measured in a 24-well white polystyrene OptiPlate microplate.

MicroScint E cocktail is used for assays that require in situ partitioning of the radionuclide-containing lipid phase from the aqueous phase in microplates. This cocktail extracts the lipids or other non-polar compounds from the aqueous phase in such assays, enabling direct counting of the samples after cocktail addition, since the label is preferentially taken up into the lipophilic cocktail.

MicroScint E cocktail has an absolute, unquenched tritium efficiency of approximately 50% when measured in a 24-well white polystyrene OptiPlate microplate.

MicroScint-O

MicroScint-O cocktail is used for counting non-polar organic samples such as hexane, heptane, ethyl acetate, etc., and for dried filters. It is particularly useful for organic samples produced from enzyme inhibition assays. MicroScint-O cocktail does not contain surfactants and is not miscible with water, so it is unsuitable for counting aqueous samples.

MicroScint-O cocktail has an absolute, unquenched tritium efficiency of approximately 58% when measured in a 24-well white polystyrene OptiPlate microplate.

MicroScint-PS

MicroScint-PS cocktail, specifically formulated for polystyrene compatibility, is suitable for use with virtually any type of microplate and provides high counting stability with minimal change in count rate within a 24 hour period. It has almost identical sample handling capabilities to MicroScint-20 with respect to sample concentration and loading, but has a lower viscosity and is therefore easier and quicker to dispense.

MicroScint-PS cocktail has an absolute, unquenched tritium efficiency of approximately 48% when measured in a 24-well white polystyrene OptiPlate microplate.

MicroScint-20

Product	Product No.	Size
MicroScint-20	6013621	1 x 1 L

Tissue Solubilizers

Meltilex Solid Scintillators / Safer & Classical Tissue Solubilizers

Meltilex Solid Scintillators

Meltilex® melt-on solid scintillator, for use with filtermat-harvested or dot-blotted samples, is an attractive alternative to traditional scintillation cocktails. Meltilex is especially well suited for use with plate counters. Simply place a sheet of Meltilex and a filtermat containing 96 samples together. Run these through a heat sealer or heat on a hot plate to melt. Sample preparation takes only one or two minutes per filtermat. Samples are fixed in position, ensuring complete elution into the cocktails. Stable counting conditions and long term storage guaranteed with no liquid waste. Metilex is versatile solution for use with glass fiber intro-cellulose or nylon filter mats.

Product	Product No.	Size
Meltilex A melt-on scintillator for Betaplate 1205	1205-441	100/pack
Meltilex B melt-on scintillator for Betaplate 1205	1205-442	75/pack
Meltilex B melt-on scintillator for Betaplate 1204	1204-442	75/pack
Meltilex A melt-on scintillator for MicroBeta 1450	1450-441	100/pack
Meltilex B melt-on scintillator for MicroBeta 1450	1450-442	75/pack

Tissue Solubilizers

Safer Tissue Solubilizers

SOLVABLE

SOLVABLE™ is an aqueous-based solubilizer that has an excellent capacity for the solubilization of wet tissue, aqueous tissue homogenates, proteins, nucleotides and other substances into a solution. With the exception of plant material, SOLVABLE

can replace the classical solubilizer, Soluene-350, for many applications, increasing safety in the laboratory due to its aqueous nature. SOLVABLE is compatible with ULTIMA Gold and has a superior mixing ratio with safer cocktails (2.5 mL sample in 10 mL cocktail).

Product	Product No.	Size
SOLVABLE	6NE9100	500 mL

Classical Tissue Solubilizers

Soluene-350

Soluene-350® is a strong organic base formulated with toluene. It has an excellent capacity for the solubilization of wet tissue, aqueous tissue homogenates, proteins, nucleotides, plant material and other substances into a solution compatible with liquid scintillation cocktails. Compatible with Hionic-Fluor (4 mL sample in 10 mL cocktail) and Ultima Gold (1 mL sample in 10 mL cocktail).

Hyamine™ Hydroxide 10-X

Hyamine™ Hydroxide 10-X is a quaternary ammonium hydroxide solution. It can be used to solubilize many biological tissues and as a ¹⁴C₂ trapping agent. Solubilizes many biological tissues; resistant to chemiluminescence. Recommended ¹⁴C₂ trapping agent for helicobacter pylori and urea "breath" test studies. Compatible with Emulsifier-Safe and Insta-gel Plus.

Product	Product No.	Size
Hyamine™ Hydroxide 10-X	6003005	500 mL
Hyamine™ Neutral	6003007	500 mL
Soluene-350	6003038	500 mL
Soluene-350 Neutral	6003039	500 mL

Specialty Chemicals

LIPIDEX/Autoradiography Enhancers

LIPIDEX

LIPIDEX products are lipophilic, hydrophobic column packing materials for liquid chromatography used to separate a variety of steroids, prostaglandins, lipids and other natural products. LIPIDEX-1000 and LIPIDEX-5000 are alkoxyated derivatives of

Sephadex® LH-20. Approximately 10% of the hydroxy groups of LIPIDEX-1000 are substituted with long alkyl chains and in LIPIDEX-5000 the substitution is approximately 50%. The polarity of LIPIDEX is a function of this substitution; thus LIPIDEX-1000 is more polar than LIPIDEX-5000.

Product	Product No.	Size
LIPIDEX-1000	6008301	25 g
LIPIDEX-5000	6008303	25 g
	6008309	4x750 g

Autoradiography Enhancers

EN³HANCE Liquid Autoradiography Enhancer

- Greatly simplifies gel processing as compared to Bonner and Lasky's method: requires no dehydration, a short preparation time and overall processing time is reduced from 5 hours to 90 minutes.
- Can be used for both polyacrylamide and agarose gels: method of choice for agarose gels.
- Performs equivalent to PPO/DMSO for polyacrylamide gels, but eliminates gel distortion: unlike PPO/DMSO, does not shrink gel.
- Contains no DMSO

EN³HANCE Spray Surface Autoradiography Enhancer

- Designed for use with ³H-, ¹⁴C- and ³⁵S-labeled compounds isolated on hybridization membranes, TLC plates and similar solid supports.
- Significantly reduces exposure times and permits the detection of extremely low isotope levels.
- Non-reactive with x-ray film and most samples and supports.
- Eliminates mixing of liquids and spillage.
- Not intended for use with tissue or gel fluorography.

ENLIGHTNING Rapid Autoradiography Enhancer

- Safer alternative for gels.
- Involves a single-step process: requires no more than one-half hour to perform.
- Produces high-quality fluorograms: effective with polyacrylamide and mixed gels.
- Store at room temperature: long shelf life.
- Contains no DMSO, odorless.
- All products are shipped and stored at ambient temperature.

ENLIGHTNING™ Rapid Autoradiography Enhancer	6NE9741	1 L

Decontaminants & Cleaners

AbSolve Glassware Cleaner

- Easily and inexpensively removes serious R or DNA contamination (autoclaving does not destroy DNA). Simply soak plastic and glassware in a 2% solution for 30 minutes, rinse and use.
- Ideal for prewashing plastic tubes for PCR. AbSolve™ prevents DNA contamination of storage and reaction vessels from exogenous sources.
- Use to clean glassware for electrophoresis. Glass plates rinse easily and AbSolve leaves no residue to interfere with gel polymerization or silver staining.
- Safe, non-abrasive AbSolve does not etch glass, contain strong acids, or emit toxic fumes.

COUNT-OFF Liquid Concentrate

- Ideal, all-purpose decontaminant: safe, efficient and economical.
- Quickly and effectively cleans up even the most persistent leftovers: proven most effective cleanser for removing radioactive residues (³H, ¹⁴C, ³²P and ¹²⁵I), stopcock and vacuum greases, lanolin and petroleum jelly, dried blood and serum, fatty and amino acids, protein complexes, and polymer films and other stubborn residues.
- Stable under extreme temperature fluctuations (-50 °C to 150 °C).
- Safer than strongly acidic cleaners, such as chromic acid: solutions will not produce toxic gases from substrates containing ¹⁴C, ¹³¹I, ³⁵S, or ³⁶Cl.
- Easy to use: adjust concentration, soaking time and temperature as needed to speed up decontamination or for particularly stubborn substances such as dried blood.

COUNT-OFF Surface Cleaner (Trigger Spray)

- Quickly and safely decontaminates small radioactive spills from benches, shields, and appliances: also efficiently cleans instrument housings, hood corners, centrifuge cups and heads, and LSC counter mechanisms.
- Traps and suspends radioactive particles in foam: makes clean-up easy and reduces the likelihood of spreading contamination to hands and clothing.
- Removes both ionic and non-polar radioactivity.
- Cleans-up stubborn grease, resins, blood and wax, even from rough surfaces.

Pico-Kleen N

Pico-Kleen N is a concentrated liquid detergent developed as an all-purpose cleaning agent and radioactive decontaminant. Pico-Kleen N is essentially neutral, in which mildness is combined with an outstanding surfactant formulation resulting in an effective cleaning action. Depending on the type of radioactive contaminated surface and isotopes, Pico-Kleen N will effectively remove the contamination when properly applied.

Pico-Kleen N	6013819	2 x 5 L

Liquid Scintillation Counting Vials

Glass Vials/Plastic Vials/Pico Pro Vial

PerkinElmer offers high quality glass and plastic vials. The best vial to choose is dependent on the type and volume of sample to be counted and the cocktail that will be used.

Glass Vials

Glass vials are manufactured from low potassium glass tubing. The tube diameter and the wall thickness are very closely controlled. The uniform wall thickness contributes to excellent counting reproducibility.

- Chemically inert: suitable for use with aggressive reagents and tissue solubilizers.
- Good visibility: to check sample/cocktail appearance.
- No solvent permeation: when classical LSC cocktails are used.

Choice of Caps

- Foil-lined urea: best for airtight seal
- Poly-cone line: best for aggressive reagents (alkali and oxidizer)
- Poly screw: basic plastic cap, no insert

Plastic Vials

Plastic vials are injection (blow) molded to exacting specifications from virgin high-density (linear) polyethylene (HDPE). Caps are recessed to assure reliable loading and transferring in automatic sample changers without skipping or jamming. Since polyethylene vials are produced from petrochemicals, they contain no measurable background and are preferred for low activity counting applications.

- Lower background level than glass vials.
- Higher counting efficiency than glass vials.
- Combustible: easier waste disposal.
- No solvent permeation with safer, high-flash point cocktails such as the ULTIMA Gold and OptiPhase HiSafe families.

Miniature Vials

Our miniature vials are uniquely designed for safer, more confident sample preparation. Our plastic vials are manufactured from high-density polyethylene (HDPE) and are available with patented "anti-static" treatment. Unique closure designs are used to ensure fast, easy and comfortable sample preparation.

Pico Pro Vial - 4 mL

Our Pico Pro Vial™ is a 4 mL plastic scintillation vial uniquely suited for use in cell harvesting systems and general purpose LSC counting. A push-on/stay-on cap provides fast closure of vials.

For use in the trays of cell harvesting systems, the caps are connected in strings of six, with spacing corresponding to the 6 x 16 formats of the trays. After the glass fiber filters are completely dried, simply punch into Pico Pro Vials and add up to 4 mL scintillation cocktail, such as Ultima Gold. Lay a string of caps over a row of six vials, and press the caps onto the vials until a "click" is heard. The connections between the caps are automatically broken, and the remaining strings are folded upwards.

Glass and Plastic Vials

Specifications

- Height with cap: 60.8 mm.
- Diameter: 14.2 mm.
- Diameter of opening: 11.2 mm.
- Diameter of cap: 14.0 mm.
- Wall thickness: 1.1 mm.
- Nominal volume: 4.0 mL.
- Maximum volume: 4.5 mL.
- Temperature resistance: up to 80 °C.

Miniature Vials

Pico Vials/Pony Vials/Polypropylene Vial for MicroBeta

Pico Prias Vial – 6 mL

Our polyethylene Pico Prias Vial™ yields high counting efficiencies with 3–6 mL of LSC cocktail.

Specifications

- Height with cap: 57.5 mm.
- Diameter: 15.0 mm.
- Diameter opening: 12.3 mm.
- Diameter of cap: 16.2 mm.
- Wall thickness: 1.3 mm.
- Nominal volume: 6.0 mL.
- Maximum volume: 6.5 mL.
- Temperature resistance: up to 80 °C.

Pico Prias Vials

Pico 'Hang-In' Vial – 6 mL

Our Pico 'Hang-In' Vial™ is a miniature polyethylene scintillation vial for use in standard 20 mL liquid scintillation analyzers. The unique self-centering design allows a 20 mL LSC vial to be used as a carrier. This system makes it possible to use large and small vials (small vial contained in a large vial) intermixed in one rack.

Specifications

- Height with cap: 57.5 mm.
- Diameter: 15.0 mm.
- Diameter of opening: 12.3 mm.
- Diameter of cap: 18.9 mm.
- Wall thickness: 1.3 mm.
- Nominal volume: 6.0 mL.
- Maximum volume: 6.5 mL.
- Temperature resistance: up to 80 °C.

Pico Glass Vial – 7 mL

Our Pico Glass Vial™ is a low background, borosilicate glass vial. High counting efficiencies compared to standard size glass vials are obtained with as little as 3 mL of LSC cocktail. These vials feature low background and are nonpermeable to aromatic hydrocarbons.

Specifications

- Height with cap: 57.3 mm.
- Diameter: 16.7 mm.
- Diameter of opening: 8.3 mm.
- Diameter of cap: 15.3 mm.
- Wall thickness: 0.9 mm.
- Nominal volume: 7.0 mL.
- Maximum volume: 8.0 mL.
- Temperature resistance: >100 °C.

Pico Glass Vials

Pony Vial – 6 mL

Our Pony Vial™ is a miniature polyethylene vial with a unique (push-on/twist-off cap) closure system not available on any other screw cap designs.

- Push-on cap provides rapid closure: for routine analysis where many vials have to be handled, push-cap vials are real time savers.
- Twist-off cap for safer reopening; the Pony Vial is compatible with all small vial counters and PerkinElmer Varisette™ sample changers.

Specifications

- Height with cap: 56.6 mm.
- Diameter: 16.0 mm.
- Diameter of opening: 12.5 mm.
- Diameter of cap: 15.9 mm.
- Wall thickness: 1.3 mm.
- Nominal volume: 5.5 mL.
- Maximum volume: 6.0 mL.
- Temperature resistance: up to 80 °C.

Pony Vials

Pony 'Hang-In' Vial – 6 mL

Our Pony 'Hang-In' Vial is a miniature polyethylene scintillation vial with all the features of the Pony Vial, but with a different cap that allows it to 'hang' into a standard 20 mL LSC vial as a carrier.

Specifications

- Height with cap: 56.6 mm.
- Diameter: 16.0 mm.
- Diameter of opening: 12.5 mm.
- Diameter of cap: 19.0 mm.
- Wall thickness: 1.3 mm.
- Nominal volume: 5.5 mL.
- Maximum volume: 6.0 mL.
- Temperature resistance: up to 80 °C.

Polypropylene Vial for MicroBeta – 4 mL

Polypropylene Vial and Cap for MicroBeta are 45 mm in height and hold 4.0 mL of LSC cocktail. In MicroBeta TriLux, they are counted in vertical position using cassette 1450-117.

Miniature Vials

Miniature Vials Ordering Guide

Product	Product No.	Description
Pico Pro Vial - 4 mL	6000252	2,000/case Economically packed. Caps packed separately.
	6000253	2,000/case Same as above, with exclusive Anti-Static treatment.
Pico Prias Vial - 6 mL	6000192	2,000/case Economically packed. Caps packed separately.
	6000193	2,000/case Same as above, with exclusive Anti-Static treatment.
Pico 'Hang-In' Vial - 6 mL	6000186	2,000/case Economically packed. Caps packed separately.
	6000187	2,000/case Same as above, with exclusive Anti-Static treatment.
Pico Glass Vial - 7 mL	6000167	1,000/case Shrink-wrapped in 5 partitioned trays of 200 vials each. Foil-lined, white urea screw caps packed separately.
Pony Vial - 6 mL	6000592	1,000/case Shrink-wrapped in 5 partitioned trays of 200 vials each. Caps packed separately.
	6000292	2,000/case Economically packed. Caps packed separately.
	6000293	2,000/case Same as above, with exclusive Anti-Static treatment.
Pony 'Hang-In' Vial - 6 mL	6000286	2,000/case Economically packed. Caps packed separately.
	6000287	2,000/case Same as above, with exclusive Anti-Static treatment.
Polypropylene Vial for MicroBeta - 4 mL	1200-421	3,000/case Economically packed. Caps packed separately.
Pico Glass Vial Caps	6000179	1,000/case White urea screw caps with foil liner.

Mid-Sized Vials

Hinge Cap Vial/Midi-Vial/Maxi-Vial

Hinge Cap Vial – 8 mL

Our 8 mL capacity Hinge Cap Vial™, made from high-density polyethylene (HDPE), is a revolution in sample preparation for liquid scintillation counting. Simply prepare your samples and close the cap; the integral hinge fits flush with the vial for snag-free counting in miniature vial cassettes.

Fast, Easy and Efficient Sample Preparation

- 33% more capacity than 6 mL miniature vials: allows miniaturization from 20 mL size vials when used with high sample capacity cocktails such as ULTIMA Gold XR.
- Enables reduced cocktail consumption: reducing the amount of waste produced and waste disposal costs.
- Pre-labeling of attached cap: avoids potential sample mix-ups for GLP compliance.
- Fits miniature vial cassettes.

Specifications

- Height with cap: 59.0 mm.
- Diameter: 17.5 mm.
- Diameter of opening: 14.0 mm.
- Diameter of cap: 16.7 mm.
- Wall thickness: 1.3 mm.
- Nominal volume: 8.0 mL.
- Maximum volume: 9.0 mL.
- Temperature resistance: up to 80 °C.

Midi-Vial – 8 mL

Our Midi-Vial™ is an 8 mL HDPE vial, providing 33% more sample capacity than miniature vials. This allows miniaturization from 20 mL size vials when used in combination with high sample capacity cocktails such as ULTIMA Gold XR. It features the same unique push-on/twist-off closure system as Pony Vials.

Specifications

- Height with cap: 62.0 mm.
- Diameter: 17.5 mm.
- Diameter of opening: 14.0 mm.
- Diameter of cap: 17.4 mm.
- Wall thickness: 1.9 mm.
- Nominal volume: 8.0 mL.
- Maximum volume: 8.0 mL.
- Temperature resistance: up to 80 °C.

Maxi-Vial – 18 mL

The large opening of our Maxi-Vial™ promotes easy sample loading of filters and other sample types. It features very low “classical” solvent diffusion due to its thick 2 mm walls.

Specifications

- Height with cap: 61.0 mm.
- Diameter: 26.5 mm.
- Diameter of opening: 22.6 mm.
- Diameter of cap: 26.9 mm.
- Wall thickness: 2 mm.
- Nominal volume: 18.0 mL.
- Maximum volume: 20.0 mL.
- Temperature resistance: up to 80 °C.

Product	Product No.	Description
Hinge Cap Vial - 8 mL	6000480	2,000/case Economically packed. Caps packed separately.
	6000488	500/case Shrink-wrapped in 5 partitioned trays of 100 vials each.
Midi-Vial - 8 mL	6000288	2,000/case Economically packed. Caps packed separately.
	6000289	2,000/case Same as above, with exclusive Anti-Static treatment.
Maxi-Vial - 18 mL	6000201	1,000/case Economically packed. Caps packed separately.
	6000203	1,000/case Same as above, with exclusive Anti-Static treatment.

Standard Vials

Super Polyethylene/Low Diffusion/High Performance Glass/
Econo Glass/Oximate Vials

Super Polyethylene Vial with Glass Vial Thread – 20 mL

Our Super Polyethylene Vial™ has excellent mechanical strength and a seamless bottom and walls. The glass vial thread enables use of caps for 20 mL glass vials.

Specifications

- Height with cap: 60.8 mm.
- Diameter: 27.0 mm.
- Diameter of opening: 17.5 mm.
- Diameter of cap: 24.9 mm.
- Wall thickness: 1 mm.
- Nominal volume: 20.0 mL.
- Maximum volume: 24.0 mL.
- Temperature resistance: up to 80 °C.

Super Polyethylene Vial with Quick Closure – 20 mL

This Super Polyethylene Vial features a polyethylene quick closure screw cap with a smooth grip.

Specifications

- Height with cap: 60.8 mm.
- Diameter: 27.0 mm.
- Diameter of opening: 17.5 mm.
- Diameter of cap: 24.7 mm.
- Wall thickness: 1 mm.
- Nominal volume: 20.0 mL.
- Maximum volume: 24.0 mL.
- Temperature resistance: up to 80 °C.

Low Diffusion Polyethylene Vial – 20 mL

Our Low Diffusion Polyethylene Vial carries a micron thin Teflon®-type coating on the inside surface, reducing the diffusion of classical type solvents by a factor of 10–20 times. The cap is lined with aluminum foil as a barrier. This vial was developed for long-term low-level measurements as a cost effective alternative to very expensive Teflon counting vials. They are 100% anti-static and provide high counting efficiency and low background.

Specifications

- Height with cap: 60.8 mm.
- Diameter: 27.0 mm.
- Diameter of opening: 17.5 mm.
- Diameter of cap: 24.9 mm.
- Wall thickness: 1 mm.
- Nominal volume: 20.0 mL.
- Maximum volume: 24.0 mL.
- Temperature resistance: up to 80 °C.

High Performance Glass Vial – 20 mL

Our High Performance Glass Vial™ is made from specially selected low potassium borosilicate glass and provides high UV transmission ($\geq 90\%$). The controlled low and stable background assures batch-to-batch homogeneity. They are supplied with a white cap with a good writing surface in dust-free tray packaging.

Specifications

- Height with cap: 60.5 mm.
- Diameter: 27.3 mm.
- Diameter of opening: 16.2 mm.
- Diameter of cap: 24.9 mm.
- Wall thickness: 0.9 mm.
- Nominal volume: 20.0 mL.
- Maximum volume: 24.0 mL.
- Temperature resistance: >100 °C.

Econo Glass Vial – 20 mL

Our Econo Glass vial is made from standard borosilicate glass, specially selected for acceptable background. They are economical and provide excellent counting performance.

Specifications

- Height with cap: 60 mm.
- Diameter: 27.3 mm.
- Diameter of opening: 16.2 mm.
- Diameter of cap: 24.9 mm.
- Wall thickness: 0.9 mm.
- Nominal volume: 20.0 mL.
- Maximum volume: 22.0 mL.
- Temperature resistance: up to 80 °C.

Oximate Vial – 20 mL

Our Oximate Vial™ is made of polyethylene or glass and features a special cap design for use in PerkinElmer's Sample Oxidizer.

Specifications

- Height with cap: 60.8 mm.
- Diameter: 27.3 mm.
- Diameter of opening: 16.2 mm.
- Diameter of cap: 24.9 mm.
- Wall thickness: 0.9 mm.
- Nominal volume: 20.0 mL.
- Maximum volume: 24.0 mL.
- Temperature resistance: >100 °C.

Standard Vials

Standard Vials Ordering Guide

Product	Product No.	Description
Super Polyethylene Vial with Glass Vial Thread - 20 mL	6001085	500/case Packed in 5 partitioned trays of 100 vials each with foil-lined urea screw caps on.
	6001087	1,000/case Economically packed. Foil-lined urea screw caps packed separately.
Super Polyethylene Vial with Quick Closure - 20 mL	6008117	1,000/case Economically packed. Caps packed separately.
	6008118	1,000/case Same as above, with exclusive Anti-Static treatment.
	6000375	500/case Shrink-wrapped in 5 partitioned trays of 100 vials each. Caps packed separately.
	6001075	500/case Packed in 5 partitioned trays of 100 vials each with caps on.
	6000477	100/case Shrink-wrapped in partitioned tray with caps on, with exclusive Anti-Static treatment.
High Performance Glass Vial - 20 mL	6001003	500/case Packed in 5 partitioned trays of 100 vials each with caps on. Special design screw cap for use in automated handling.
	6001015	500/case Packed in 5 partitioned trays of 100 vials each with foil-lined screw caps on.
	6001050	500/case Packed in 5 partitioned trays of 100 vials each. Poly-Cone lined urea screw caps packed separately.
	6000128	500/case Shrink-wrapped in 10 partitioned trays of 50 vials each. Foil-lined urea screw caps packed separately.
	6000129	500/case Shrink-wrapped in 5 partitioned trays of 100 vials each. Foil-lined urea screw caps packed separately.
	6000134	500/case Shrink-wrapped in 10 partitioned trays of 50 vials each. Poly-Cone lined urea screw caps packed separately.
	6000135	500/case Shrink-wrapped in 5 partitioned trays of 100 vials each. Poly-Cone lined urea screw caps packed separately.
Econo Glass Vial - 20 mL	6000096	500/case Shrink-wrapped in 4 partitioned trays of 125 vials each. Foil-lined urea screw caps packed separately.
	6000097	500/case Shrink-wrapped in 4 partitioned trays of 125 vials each. Poly screw caps packed separately.
	6000098	500/case Shrink-wrapped in 4 partitioned trays of 125 vials each. Poly-Cone lined urea screw caps packed separately.

QUANTULUS Vials

Standard Vials Ordering Guide/Teflon-Copper Vials/Other QUANTULUS Vials

Product	Product No.	Description
Oximate Vial - 20 mL	6001095	500/case Polyethylene vials with glass vial thread. Packed in 5 partitioned trays of 100 vials each with foil-lined urea screw caps on. Special design screw cap for automated handling.
	6001009	500/case Glass vials. Packed in 5 partitioned trays of 100 vials each with foil-lined urea screw caps on. Special design screw cap for automated handling.
Glass Vial Caps	6001025	1,000/case Foil-lined urea screw caps.
	6001027	1,000/case Poly-Cone lined urea screw caps.

	6000250	1,000/case Foil-lined urea screw caps. Special design for automated handling.

QUANTULUS Vials

Teflon-Copper Vials

Our Teflon-Copper vials give the best performance and are ideal particularly for low level ^{14}C dating where benzene is used. The Teflon-Copper vials can be used with PerkinElmer's QUANTULUS Ultra Low Level Liquid Scintillation Spectrometer.

Product	Product No.	Description
Teflon-Copper Vials - 3 mL	1220-500	10/package
Teflon-Copper Vials - 7 mL	1220-501	10/package
Teflon-Copper Vials - 15 mL	1220-502	10/package
Teflon-Copper Vials - 20 mL	1220-503	10/package

Other QUANTULUS Vials

Product	Product No.	Description
Plastic Vials - 20 mL	1200-420	100/package Caps included.

LSC Standards & Sources

Internal LSC Standards/Unquenched LSC Standards

Internal LSC Standards

- Determination of counting efficiency by internal standardization is the original analytical technique, to which other efficiency determination methods are referred.
- Certified internal LSC standards are calibrated in DPM per unit weight rather than DPM per unit volume.
- The advantage of calibrating in DPM per gram is that the calibration remains constant with changes in temperature.

Product	Product No.	Size
³ H Water, ~2.5 x 10 ⁶ DPM/g	6004052	10 mL
³ H Toluene, ~2.5 x 10 ⁶ DPM/g	6004051	10 mL
¹⁴ C Toluene, ~5 x 10 ⁵ DPM/g	6004062	10 mL

Unquenched LSC Standards

- Used to optimize liquid scintillation counter settings and to check long term stability of the instrument.
- Each standard contains PPO/Dimethyl POPOP in scintillation grade toluene, is argon purged and is flame sealed in a borosilicate ampoule.
- Each standard has a cap designed for high reflectivity and ease of handling.
- Available in two sizes: standard size for use with instruments using standard 20 mL vials and Pico standards for small vial systems.
- Both conventional size standards and Pico standards are available.

Product	Product No.
Conventional size standards (20 mL vial)	
Background standard	6008511
³ H standard, ~2.5 x 10 ⁵ DPM	6008512
¹⁴ C standard, ~1 x 10 ⁵ DPM	6008513
Standard set (one of each of the above): unquenched standard	6008500
Conventional size standards for low level counting (20 mL vial)	
Background standard	6018913
³ H standard, 8 x 10 ⁴ DPM	6018911
¹⁴ C standard, 4 x 10 ⁴ DPM	6018912
Standard set (one of each of the above): unquenched TC standard	6018914
Pico standards (small 7 mL vial)	
Background standard	6008411
³ H standard, ~2.5 x 10 ⁵ DPM	6008412
¹⁴ C standard, ~1 x 10 ⁵ DPM	6008413
Standard set (one of each of the above)	6008400

Note: 10⁵ DPM = 1.67kBq = 0.045 uCi

LSC Standards & Sources

Quenched LSC Standards/Extended Range Quenched Standards

Quenched LSC Standards

- Used to establish efficiency correlation curves applicable to a wide variety of scintillation cocktails and quenching agents.
- Supplied in sets of ten, each containing the same amount of radioactivity, but with progressively higher levels of quench.
- Prepared in PPO/Dimethyl POPOP/toluene, argon purged and flame-sealed in borosilicate glass ampoules. The quenching agent is nitromethane.
- Both conventional size standards and Pico standards are available.

Product	Product No.
Conventional size standards (20 mL vial)	
³ H standard (set of ten), ~2.5 x 10 ⁵ DPM/vial	6008501
¹⁴ C standard (set of ten), ~1 x 10 ⁵ DPM/vial	6008502
Combination set (one each of the two sets above)	6008503
Conventional size standards for low level counting (20 mL vial)	
³ H standard (set of ten), ~3 x 10 ⁴ DPM/vial	6018917
¹⁴ C standard (set of ten), ~2 x 10 ⁴ DPM/vial	6018918
Combination set (one each of the two sets above)	6018919
Pico standards (small 7 mL vial)	
³ H standard (set of ten), ~2.5 x 10 ⁵ DPM/vial	6008401
¹⁴ C standard (set of ten), ~1 x 10 ⁵ DPM/vial	6008402
Combination set (one each of the two sets above)	6008403

Extended Range Quenched Standards

- These standards are recommended to establish quench correlation curves for more heavily quenched samples.
- The improved efficiency correlation contributes to higher accuracy in the measurements of samples which may be difficult to count correctly.
- This series only differs in composition from the standards above by the concentration of the quenching agent used.
- Both conventional size standards and Pico standards are available.

Product	Product No.
Conventional size standards (20 mL vial)	
³ H standard (set of ten), ~2.5 x 10 ⁵ DPM/vial	6018594
¹⁴ C standard (set of ten), ~1 x 10 ⁵ DPM/vial	6018595
Combination set (one each of the two sets above)	6018596
Pico standards (small 7 mL vial)	
³ H standard (set of ten), ~2.5 x 10 ⁵ DPM/vial	6018551
¹⁴ C standard (set of ten), ~1 x 10 ⁵ DPM/vial	6018552
Combination set (one each of the two sets above)	6018553

Note: 10⁵ DPM = 1.67kBq = 0.045 μ Ci

LSC Standards & Sources

ULTIMA Gold Quenched Standards/Spec-Chec/Gamma Sources

ULTIMA Gold Quenched Standards

- ULTIMA Gold quenched ^3H and ^{14}C standards ensure accurate correction of variable quench when using liquid scintillation cocktails from the ULTIMA Gold Family of safer scintillation cocktails.
- Supplied in flame-sealed, low potassium glass vials.
- Both conventional size standards and small vial Pico standards are available.

Product	Product No.
Conventional size standards (20 mL vial)	
^3H standard (set of ten), $\sim 2.5 \times 10^5$ DPM/vial	6007600
^{14}C standard (set of ten), $\sim 1 \times 10^5$ DPM/vial	6007601
Combination set (one each of the two sets above)	6007602
Conventional size standards for low level counting (20 mL vial)	
^3H standard (set of eight), $\sim 3 \times 10^4$ DPM/vial	6010704
^{14}C standard (set of eight), $\sim 2 \times 10^4$ DPM/vial	6010705
Combination set (one each of the two sets above)	6010706
Pico standards (small 7 mL vial)	
^3H standard (set of ten), $\sim 2.5 \times 10^5$ DPM/vial	6007603
^{14}C standard (set of ten), $\sim 1 \times 10^5$ DPM/vial	6007604
Combination set (one each of the two sets above)	6007605

Spec-Chec

Reagents for testing the PerkinElmer Sample Oxidizer performance (recovery, spillover and memory).

Product	Product No.	Size
Nonradioactive Spec-Chec	6002130	50 mL
High Activity ^3H Spec-Chec, $\sim 2 \times 10^6$ DPM/mL	6002134	25 mL
High Activity ^{14}C Spec-Chec, $\sim 8 \times 10^5$ DPM/mL	6002135	25 mL
Low Activity ^3H Spec-Chec, $\sim 5 \times 10^4$ DPM/mL	6002136	25 mL
Low Activity ^{14}C Spec-Chec, $\sim 5 \times 10^4$ DPM/mL	6002137	25 mL
High Activity Spec-Chec Kit	6002138	
Low Activity Spec-Chec Kit	6002139	

Gamma Sources

Calibration sources: 12 x 75 mm for linked belt or cassette sample changers.

Product	Product No.
Cesium-137 source, ~ 0.25 uCi (9.25 kBq), 1 piece	6018503
Iodine-129 source, ~ 0.05 uCi (1.85 kBq), 1 piece	6018504

Note: 10^5 DPM = 1.67kBq = 0.045 uCi

Counting Accessories

Matched Certified Sources/Counting Accessories

Matched Certified Sources

Pico-Calibrators are matched sets of radionuclide (gamma) point sources that are sealed with epoxy in 12 x 75 mm polypropylene tubes. Activity is verified using a NaI detector for which the efficiency has been established using NIST traceable standards.

Each source is labeled to identify the radionuclide, activity (in both microCuries and DPM), assay date and lot number. Standards are made in groups which are matched by counts to ensure +/- 1% source matching. Pico-Calibrators are typically used for verifying detector counting efficiency and normalizing multi-detector gamma counters. The calibrators are supplied with a Pico-Calibrator log book that contains technical information as well as a template for quality assurance.

The last two digits of the catalog number indicate the isotope. Cobalt-57 and Iodine-125 contain 2 x 10⁵ DPM; Chromium-51 contains 2 x 10⁶ DPM and Iodine-129 contains 110,000 DPM.

Product	Size (Set)	Product No.	Product No.	Product No.	Product No.

Counting Accessories

A partial list of labware and accessories for liquid scintillation counting follows. For help choosing the labware and accessories best suited for your liquid scintillation counter and your specific applications, please consult with your local PerkinElmer Sales Representative.

Product	Product No.	Description
Cardboard Vial Trays for 20 mL vials	6008161	10/set For 50 vials (5 x 10) Solid, corrugated cardboard trays with separation inserts. Numbered rows for easy sample identification.
	6008162	10/set For 100 vials (10 x 10) Solid, corrugated cardboard trays with separation inserts. Numbered rows for easy sample identification.
Cardboard Vial Trays for 6 mL vials	6008163	10/set For 200 vials (10 x 20) Solid, corrugated cardboard trays with separation inserts. Numbered rows for easy sample identification.
Rack-System Carrier Tray	6008150	1 each Holds vials during sample preparation.
Insert for Rack-System for 20 mL vials	6008151	1 each Capacity: 32 vials (4 x 8)
Servo-Tray Reusable Vial Carriers	6008129	3/pkg Capacity: 50 vials (20 mL) Inert to cocktails, easily decontaminated and autoclavable.

Counting Accessories

Counting Accessories/Dispensette

Product	Product No.	Description
Tri-Carb Varisette Cassette	7000749	10/pkg For 4 mL vials
	7000669	10/pkg For 6, 7 and 8 mL vials
	7000668	10/pkg For 20 mL vials
Tri-Carb Varisette Cassette ID labels	7000686	1 set
Vented Pico Holder for miniature vials	6013400	100/case Holder for counting all PerkinElmer miniature vials in conventional LSC systems.
Vented Microtube Holder	6013401	100/case 6 mm. Holds 0.5 mL mi or Cerenkov counting.
	6013402	100/case 11 mm. Holds 1.5 mL microfuge tubes for conventional or Cerenkov counting

Dispensette

The Dispensette® III permits rapid, repeatable dispensing of exact quantities of reagents. It has a floating piston for seal-free dispensing, an adjustable dispensing angle for optimum readability and safety, plus a telescoping filling tube that can be easily adjusted to many different bottle sizes. A unique SafetyPrime® valve (Product No. 6005736), which avoids waste by recirculating reagent while priming the dispenser, is also available.

- High accuracy: 0.5% with 0.1% coefficient of variation
- Ideal for high viscosity fluids.
- Autoclavable without disassembling
- Integrated safety discharge system
- Unique SafetyPrime-1 pt valve (optional)

Dispensettes are delivered complete with a 30/32 mm and 32/45 mm adapter, 250–480 mm long FEP filling tube and discharge tube. All Dispensettes are specifically adapted for dispensing liquids of higher viscosity and fit all of the container sizes.

Product	Product No.
Dispensette, 0.2–2.0 mL	6005361
Dispensette, 0.5–5.0 mL	6005360
Dispensette, 1.0–10.0 mL	6005362
Dispensette III, with SafetyPrime® Valve, 1.0–10.0 mL	6005375
SafetyPrime-1 pt Venting Valve	6005376

Ordering Information

To Place an Order/Payment Options/Product Availability & Delivery

We invite you to visit our website at www.perkinelmer.com. From our home page you can access products, promotions, news, support, your online shopping account and more.

To Place an Order

To order online:

Visit www.perkinelmer.com/shop or see our convenient online ordering guide on p.173.

By telephone, fax or mail: In the USA

PerkinElmer
710 Bridgeport Avenue
Shelton, CT 06484-4794
USA

Telephone: 1-800-762-4000 or 203-925-4602

Fax: 203-944-4904

Mail: Send your purchase order to M/S 270 at the address above.

E-mail: LAS.Sales@perkinelmer.com

Customer Care Representatives are available to take your order or answer your questions from 8 a.m. until 8 p.m. EST. U.S. orders for same-day shipments of ^{32}P , ^{33}P , and ^{35}S nucleotides can be accepted until 5 p.m. EST.

Outside the USA

To place or inquire about an order outside the USA, consult the list of worldwide sales offices listed at www.perkinelmer.com/contactus.

To process your order, please be prepared to provide the following information:

- Customer account number
- Billing and shipping addresses
- Name and phone number
- Purchase order number or credit/purchasing card number and expiration date
- Product ordering code, quantity, size, and unit of measurement being ordered
- Special shipping information required by your institution (researcher's name, permit number, etc.)
- Special packaging or fresh lot scheduling required
- Any other special shipping or delivery requirements

Payment Options

For your convenience, PerkinElmer accepts MasterCard® and Visa® in Canada, Europe, the United States and other select countries. We accept American Express, but only in the United States. Please ask your Customer Care Representative for more information or consult the website.

*We accept American Express only in the United States at this time.

Product Availability & Delivery

Your Customer Care Representative can provide you with up-to-date information on product availability, including radiochemical products manufactured on a fresh lot schedule.

Regularly Stocked Items

Most reagent and consumable orders are shipped the same business day or the next business day depending on time of order placement. Delivery of products depends on your country. Check with your Customer Care Representative for more information on delivery times.

Please let your Customer Care Representative know if you require expedited delivery service, or need additional shipping information.

PerkinElmer is committed to delivering your order as quickly as possible. Our products are shipped in the safest, most advanced, DOT-approved packaging available. PerkinElmer reserves the right to choose the best way of shipping.

PerkinElmer reserves the right to make changes in its product offering at any time and without prior notice. Please visit www.perkinelmer.com for the most up-to-date product information.

Standing (Recurring) Orders

It's easy to set up recurring orders for your most frequently used reagents and consumables. Your products will automatically arrive on a weekly, monthly, semi-monthly, or other recurring basis as you need them, with no further action required from you. You'll save the time of reordering—and get added savings too.

- Prices on a standing order of the same product with at least two designated ship dates will be guaranteed for up to 12 months from the first ship date.
- Standing orders can be set up online at www.perkinelmer.com/shop or through your Customer Care Representative.

Special Requests

We will make every effort to accommodate your specific shipping or packaging requirements. Additional charges may apply. Orders with special packaging usually require an additional seven to ten business days to fulfill. If you require special packaging, discuss your requirements with a Customer Care Representative when placing your order. Please provide:

- Catalog number, product name, unit of measure and number of packages
- Special requirements (specific activity, solvent concentration, type and size of special containers)
- Specific delivery time requirements (if any)

Changes or Cancellations

All cancellations and change requests should be made as soon as possible through Customer Service. Our ability to meet your request will be dependent upon the type of product ordered and the timing of your request.

Regularly Stocked Items

Most reagent and chemical orders may be canceled or changed at no charge by contacting Customer Service at least 24 hours prior to the scheduled shipping date.

We will attempt to accommodate changes or cancellations received on less than 24-hours notice. A processing fee equivalent to US \$30.00 may be charged for any order that is cancelled or changed on the day of shipment.

Specially Packaged Items

Please cancel at least 48 hours prior to scheduled shipping to avoid charges. 50% of the purchase price on specially packaged orders will be invoiced for orders canceled on less than 48 hours notice.

Other Items

More than 48-hours notice is required to cancel orders for short-lived radionuclides, packaged-to-order radionuclides, and microspheres. Please cancel your order at least 48 hours prior to scheduled shipping to avoid charges.

Product Inspection, Credits & Returns

Product Inspection

Upon receipt of product, please examine the packing slip, product labeling, and technical data sheets (inside the package) for content. Any discrepancies between these documents should be reported to a Customer Care Representative immediately. If you do not receive your package by the expected date or time, please check with your receiving or radiation safety departments before calling PerkinElmer.

Credits

PerkinElmer will either credit your account or replace the shipment of product if your order was incorrectly filled by PerkinElmer or the product does not meet PerkinElmer published specifications and you notify PerkinElmer and return the product (if required) to us within 30 days.

Credit or replacement cannot be authorized beyond 30 days of your receipt of the product.

Returns

Please do not return shipments without prior authorization. Due to the nature of our products, some products may not be returned while others require very specific return procedures.

You must obtain a return authorization number and instructions for returning the product from PerkinElmer Customer Care before returning any item. All products must be returned in their original packaging and condition.

A 25% restocking fee will be applied to any product returned due to a buyer's ordering error. In instances where a reagent precursor material has been secured to satisfy an order, a 50% restocking charge will apply. Restocking charges may apply for other return shipments. In all cases, you will be advised of these terms before PerkinElmer acquires the material. All products authorized for return must be received at the indicated PerkinElmer facility within 30 days.

Enhanced NEN Radiochemicals Product Labeling Makes Reorder Easier than Ever

Our NEN Radiochemicals product labeling system includes barcodes and extended product numbers on container labels and Technical Data sheets that clearly identify the particular size that you have received. For example, the 1 mCi size of Adenosine 5'-triphosphate, [γ - ^{33}P]-, NEG602H, will be labeled as NEG602H001MC, where 001MC refers to 1 mCi.

This guide utilizes these extended product numbers to make it easy for you to order, either online or by telephone. Alternatively, simply check the label on the container of the product you want to reorder for your lab, and use that exact (extended) product number. You'll be sure to get the right size every time you order!

Order Online—It's Fast, Simple & Convenient

Order online from PerkinElmer and take full control of your purchasing process. Choose from thousands of reagents, consumables and laboratory supplies, including NEN radiochemicals.

- Quick registration available by clicking "login"
- Easy to use product search features
- Customer-specific pricing
- Order history and tracking
- Email confirmations
- Place standing orders
- Place several purchase orders in one screen
- Save frequently ordered items to your favorites list

Online ordering is currently available in the locations below. Please follow the simple registration process at the URL indicated for your country to start shopping!

For PerkinElmer's full offering of online ordering services, please visit www.perkinelmer.com/shop or see www.perkinelmer.com/online for more online ordering information.

If you require additional assistance with online ordering, contact our team of online specialists at web@perkinelmer.com.

Register and Order – 3 Easy Steps

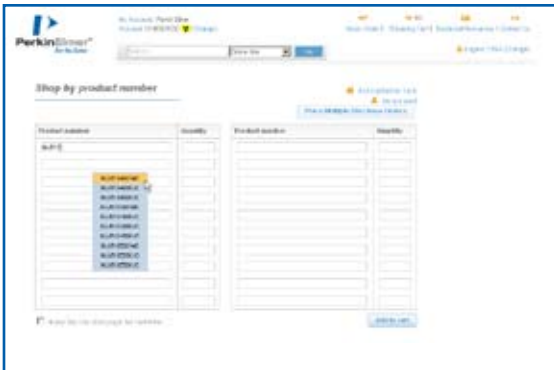

step 1: Quick Registration

Use the quick registration feature to view detailed information and pricing for our products:

- Click “Login” at the top right to register
- Three pieces of information required: Country, E-mail address, Password
- Include your account number to view your customer-specific pricing and to confirm shipping/billing addresses

step 2: Find Your Product

There are two ways to find your product:

- In the Search field on the top of each screen
 - Enter full or partial product number
 - Enter product name or description
- In the Shop by Product Number screen
 - Enter full product number
 - Enter partial product number, web will offer potential matches

step 3: Go To Shopping Cart

Our simple, quick and easy checkout process offers:

- Customer-specific pricing
- Real-time product availability
- Shipping and Billing attention
- Special order instructions
- Both Purchase Order and Credit Card accepted
- Choose your own ship date

PerkinElmer Shop Online Features

Build a Favorites List

Make ordering even easier by creating a “Favorites” list of items you order frequently. You can add products from any product page, past orders or from your Shopping Cart by clicking on “add to favorites”. To order one or more items from this list, click on “Favorites” from the Home Page or the My Account page to make your selections.

Set Up Standing (Recurring) Orders

Set up a Standing Order online for items that need constant replenishing. Choose the order frequency as weekly, monthly, etc, and our standing order tool can automatically calculate your shipping dates. You can also pick the specific dates of shipment if you wish, so you can fully customize the delivery schedule for the order. You will receive an e-mail notification each time an order ships.

Plan your shipments in advance with the standing order feature.

Place Multiple Purchase Orders at Once

For customers who place several orders in one day, we have developed a Multiple Purchase Order tool. Place up to 7 orders on the same account at once. For each purchase order, you need only to indicate the shipping attention, PO number, and the item number, to quickly complete all your ordering in one screen.

Order faster with the Multiple Purchase Order feature

Attention Purchasing Professionals & Radiation Safety Officers

At PerkinElmer, we are passionate about streamlining orders and the ordering process so that you can be as efficient as possible. We’ve designed our online shopping experience with direct input from purchasing and radiation safety professionals from around the globe. We make certain there is no compromise of the necessary safeguards for ordering radiochemicals and other reagents or consumables online. Be sure with PerkinElmer! For more information or assistance with online ordering, please e-mail web@perkinelmer.com.

Methods of Payment

Pay the way you like! Our online ordering site accepts payment by Purchase Order and major credits cards.

*We accept American Express only in the United States at this time.

PerkinElmer Shop Online Features

Shopping Cart Approval

Radiation Safety Officers and Purchasing Agents can maintain control of radioactive site limits with PerkinElmer's Shopping Cart Approval. A designated approver can monitor and approve end-user orders before they are received and processed by PerkinElmer.

Shipping Information

Customize each order's shipping information by including information in the following fields:

- **Attention/Recipient**- specify a name or room number on the shipping label
- **Special Shipping Instructions** - communicate any special requests directly to customer care
- **Internal Delivery Instructions** - additional information for your receiving department such as building and lab number, to be printed on the shipping paperwork

 Our online ordering software automatically identifies radiochemical authorized shipping locations, and will prevent radiochemicals from being shipped to non-authorized locations. For your convenience, a radioactive symbol will be displayed at the top of the screen for authorized accounts.

Order Confirmation

When your order is complete, a confirmation of your order and shipping information will be displayed. You will also receive an e-mail confirmation for your records. As you place your order, you may add additional addresses for other individuals who might require this confirmation.

Shipping Confirmation

Once an order has been shipped, an e-mail confirmation is generated by PerkinElmer, confirming the date of the shipment, its contents, and the location to which the shipment was sent. Tracking details are also provided for your reference, where available.

Order History

You can login to your online account to check on past orders that were placed online, or by phone or fax. Search by order confirmation number, your purchase order number, or within a specified date range. Carrier and tracking information is also available here.

Contact Us

Questions? Our knowledgeable Customer Care Representatives are ready to help Monday through Friday, from 8:00 a.m. to 8:00 p.m. EST.

By Phone: U.S. 1-800-762-4000,

By Email: customer-careUS@perkinelmer.com.

For other countries, contact your local Customer Care department. For contact details, please go to www.perkinelmer.com/contactus.

Online Ordering Specialists can be reached at web@perkinelmer.com.

E-Procurement Capabilities

Does your organization use an internal purchasing system, or have special needs that require more attention to detail? Our experienced Technology Team is ready to help support your specific purchasing needs through a variety of solutions, including:

- Receipt to invoice delivery
- Specific capabilities
- SciQuest, Ariba, Oracle, SAP, PeopleSoft and other custom solutions
- cXML, xCBL, XML and OCI

Contact us at ebusiness@perkinelmer.com to discuss your ordering and invoicing needs.

Terms & Conditions of Sale

1. PARTIES.

"Buyer" as used herein means you as purchaser of the products. "PERKINELMER" as used herein means PerkinElmer LAS, Inc. together with its affiliated companies.

2. PRICING AND TERMS.

PERKINELMER reserves the right to delete or change specifications, including price, at any time without notice. Notwithstanding the foregoing, prices on standing orders (an order with two or more predetermined ship dates of the same product and vial size) with designated shipping dates will be guaranteed for up to 12 months from the first ship date. Payment terms are due upon receipt.

3. SHIPPING AND HANDLING.

Products are shipped F.O.B. shipping point and all risk of loss or damage to products in transit is upon Buyer. Shipping charges are prepaid and added to Buyer's invoice. PERKINELMER may ship partial orders unless Buyer expressly provides otherwise in its purchase order. Additional charges may apply to accommodate special shipping and/or packaging requirements that deviate from PERKINELMER standard practices.

4. CHANGES OR CANCELLATION.

Orders for regularly stocked items may be cancelled at no charge provided that PERKINELMER receives notice at least 24 hours before the date of scheduled shipment. Orders that require special packaging must be cancelled at least 48 hours before the date of scheduled shipment, otherwise PerkinElmer may invoice you a 50% restocking fee. Cancellations after the order is shipped may be subject to a 25% restocking fee. Additions to an order after processing and shipping may be subject to additional freight and ice charges.

5. RETURNS AND CREDITS.

In order to facilitate processing, products may not be returned without prior authorization. To return damaged or incomplete products, please contact a PERKINELMER Customer Service Representative within 48 hours of receiving the product to obtain a return authorization number and instructions for returning the goods. There will be a 25% processing fee on all goods returned due to Buyer's ordering error.

6. PERMITTED USE OF PRODUCT.

Buyer shall use the products for research purposes only, and shall not use the products for any other purposes, including, without limitation, in foods, cosmetics, drugs, biologics, or medical devices for humans or animals. Buyer shall not (i) transfer, sell or otherwise distribute the products to any third party, whether alone or in combination with other materials, (ii) modify the products for resale, or (iii) use the products to manufacture commercial products, without prior written approval from PERKINELMER. Buyer also shall comply with any instructions or other limitations furnished by PERKINELMER relating to use of the products and not misuse the products in any manner. No license or immunity under any patent is either granted or implied by the sale of any of PERKINELMER's products. PERKINELMER disclaims any and all responsibility for any injury or damage which may be caused by the failure of Buyer or any other person to use these products in accordance with the conditions outlined herein.

7. LIMITED WARRANTY; LIMITATION OF LIABILITY.

PERKINELMER products are warranted to meet PERKINELMER product specifications in effect at the time of shipment. Notice of nonconforming products must be made to PERKINELMER within 30 days of receipt of the product or within the half-life of the radioisotope contained within the product, whichever period is shorter. This product warranty limits PERKINELMER's liability to, at PERKINELMER's sole option, replacement of the product or refund of the invoice price of the product. This warranty applies to all PERKINELMER sales, including sales within and outside the United States. This limited warranty shall not extend to anyone other than the original purchaser of the product. This limited warranty is the sole and exclusive warranty and sets forth the exclusive remedies for all products and is in lieu of all other warranties. PERKINELMER MAKES NO OTHER WARRANTIES, WHETHER EXPRESSES OR IMPLIED, WITH RESPECT TO THE PRODUCTS, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, OR THAT SUCH PRODUCTS MAY BE EXPLOITED WITHOUT INFRINGING THE PATENT OR OTHER INTELLECTUAL PROPERTY RIGHTS OF ANY THIRD PARTIES. PERKINELMER shall not be liable to Buyer, nor shall PERKINELMER be responsible for indemnifying Buyer, for use by Buyer of the products. PERKINELMER SHALL BE UNDER NO LIABILITY WHATSOEVER TO BUYER (WHETHER SUCH LIABILITY ARISES FROM A CLAIM BASED ON CONTRACT, WARRANTY, TORT OR OTHERWISE) FOR ANY EXPENSE, LOSS, DAMAGE OR INJURY OF ANY KIND (INCLUDING, WITHOUT LIMITATION, ANY LOSS OF PROFIT, LOSS OF USE, OR DIRECT, INDIRECT, PUNITIVE, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES, INCLUDING BUT NOT LIMITED TO,

LOSS OF RESEARCH OR DEVELOPMENT, ANTICIPATED PROFITS OR OTHER ECONOMIC LOSS, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES) SUSTAINED BY BUYER OR ANY THIRD PARTY ARISING OR INCURRED IN CONNECTION WITH THE PROVISION, USE OR PERFORMANCE OF THE PRODUCTS. IN NO EVENT SHALL PERKINELMER'S LIABILITY FOR ANY CLAIM (WHETHER BASED ON CONTRACT, WARRANTY, TORT OR OTHERWISE) ARISING IN CONNECTION WITH THE PROVISION, USE OR PERFORMANCE OF THE PRODUCTS EXCEED THE PURCHASE PRICE PAID BY BUYER FOR SUCH PRODUCTS.

8. STERI-PACKAGED PRODUCT.

Products described as being supplied as "Steri-packaged" are prepared with additional precautions to substantially reduce product bioburden and enhance product stability. PERKINELMER MAKES NO WARRANTIES, WHETHER EXPRESSED OR IMPLIED, WITH RESPECT TO THE STERILITY OR NON-PYROGENICITY OF THESE OR ANY PRODUCTS.

9. ACCEPTANCE; MODIFICATION OF TERMS.

Buyer's assent to these Terms and Conditions of Sale shall be conclusively presumed from Buyer's submission of its purchase order. No addition to or modification of said Terms and Conditions of Sale shall be binding upon PERKINELMER unless specifically agreed to by an authorized representative of PERKINELMER in writing. If Buyer's purchase order or other correspondence contains terms or conditions contrary to or in addition to the terms and conditions contained herein, acceptance of any order by PERKINELMER shall not be construed

as assent to such contrary or additional terms and conditions or constitute a waiver by PERKINELMER of any of the terms and conditions contained herein. PERKINELMER's acceptance of Buyer's purchase order is expressly conditioned on Buyer's assent to these Terms and Conditions of Sale.

10. GOVERNING LAW; VENUE.

These Terms and Conditions of Sale shall be governed by and construed in accordance with the laws of the Commonwealth of Massachusetts, without regard to the conflicts of law principles thereof. Any disputes relating to these Terms and Conditions of Sale shall be adjudicated in the state or federal courts in the Commonwealth of Massachusetts, and Buyer hereby consents to the exclusive jurisdiction of such courts for purposes of any such litigation.

Regulations Concerning the Commercial Use of Research Products

The research products listed in this catalog are intended for research and development or laboratory use only. Within the United States, their use for other commercial purposes is prohibited under the Toxic Substance Control Act (TSCA) unless all chemicals in a particular product are listed on the TSCA Inventory or until a Premanufacturing Notice (PMN), submitted by PerkinElmer for each chemical not so listed, is approved by the Environmental Protection Agency (EPA). The research status of our products is stated on each Technical Data sheet and on each product label. For assistance in determining permitted uses of these products (other than for research or analysis), please contact the PerkinElmer Technical Support Group. Comparable regulations exist in many countries, such as the EINECS Register in the European Union.

For tritium gas orders, please notify PerkinElmer in advance so that special licensing requirements can be fulfilled.

Radioactive Materials

In most areas of the world, the possession and use of radioactive materials are regulated by law, and purchasers must possess a license issued by a governmental regulatory authority. In addition, users of radioactive materials may be subject to local and institutional regulations. We strongly recommend, therefore, that investigators familiarize themselves with all applicable regulations. Compliance with institutional, local, state, and national regulations concerning the procurement and use of radioactive materials is the responsibility of the purchaser.

U.S. Federal Regulations

Within the United States, the use and possession of by-product radioactive materials are governed by regulations issued by the U.S. Nuclear Regulatory Commission (NRC).

U.S. State Regulations

Information concerning the name and address of the appropriate regulatory agency in any of the states listed here or in New York City can be obtained from:

U.S. Nuclear Regulatory Commission
Office of State and Tribal Programs
Washington, DC 20555

The Atomic Energy Act permits the NRC to transfer by specific agreement some of its regulatory authority to states that have established agencies for the control of radioactive materials. Agreement States that have assumed control as of January 2006 are Alabama, Arizona, Arkansas, California, Colorado, Florida, Georgia, Illinois, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Mississippi, Nebraska, Nevada, New Hampshire, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Rhode Island, South Carolina, Tennessee, Texas, Utah, Washington and Wisconsin. The city of New York has also assumed control of radioactive materials.

The states of Delaware, New Jersey, Pennsylvania, Hawaii, Minnesota and Virginia issue specific licenses to cover both

possession and use of naturally-occurring and accelerator-produced radioactive material (NARM). Consequently, users of NARM in these states will, in general, require two licenses. The states of Indiana and Alaska require PerkinElmer to verify requisitions of NARM prior to shipment. The states of Connecticut and Idaho as well as the District of Columbia require a report of NARM shipped on a monthly basis. States of Vermont and Michigan require users of NARM to register.

European Union

In the European Union, regulation is based on Council Directive 80/836/Euroatom, as amended. Users are responsible to comply with those amendments; contact local authorities.

Special Regulations Concerning Pharmaceutical Use of Radioactive Materials

Radioactive materials listed in this catalog are intended for laboratory use. Purchasers intending to use radioactive materials in pharmaceutical applications are cautioned that federal and state law strictly limit such usage and that the NRC, Agreement States, and the U.S. Food & Drug Administration (FDA) have jurisdiction over certain applications. Researchers or physicians in the United States who intend to employ any radioactive materials in humans must hold a valid license from either the USNRC under 10 CFR Part 35, or from an Agreement State, authorizing the human use of NARM and/or by-product material.

Research Studies in Humans

Research studies in humans using radioactive materials generally must be conducted under a Notice of Claimed Investigational Exemption for a New Drug (IND) in accordance with 21 CFR 312 or under cognizance of a Radioactive Drug Research Committee (RDRC) in accordance with 21 CFR 361. The Food Drug and Cosmetic Act also permits licensed medical practitioners and pharmacists to prepare drugs for use in the course of their specific practice, independent of the above types of investigational studies.

A physician or pharmacist administering or preparing a radioactive substance for human use bears all responsibility for its safety, efficacy and pharmaceutical quality, including its sterility and non-pyrogenicity.

Prior to shipment of radioactive materials with potential human use, PerkinElmer requires acknowledgement of intended use and of the circumstances described above, if applicable. A Clinical Application Statement will be provided for this acknowledgement. If the intended use is in humans, PerkinElmer requires additional certification and indemnification.

In Europe, the Middle East, and Africa, the use of substances for medicinal applications is covered by national regulations and/or EU Regulation No. 2309/93 (EEC).

Narcotics & Dangerous Drugs

Narcotics and non-narcotics offered for sale in this catalog have been classified by the U.S. Drug Enforcement Administration (DEA) as exempt chemical preparations, and thus do not require submission of a DEA-222 form prior to shipment.

Narcotics and psychotropic substances are regulated under the United Nations' International Narcotics/ Psychotropics Control Board. National regulations exist to control their possession, use and distribution. Users are responsible to follow those regulations applying to them and to inform PerkinElmer in case they request custom preparations of such substances or containing such substances.

Dangerous Substances & Preparations

In Europe, the Middle East, and Africa, national regulations may require you to announce use/handling of dangerous substances classified with special hazards to local authorities. Please review the Safety Data Sheet which is mailed to you with or before the first delivery of such a product.

Technical Support

Radiometric Detection Technical Support

Technical Support is always available for you to answer your product and technology questions. Our specialists have dozens of years of experience working on all aspects of radiochemical detection development, manufacturing and applications, using the best handling and safety practices in the industry.
